Advertisements of great length, or of special character, inserted by contract on the most favorable terms.

☞ *Ten lines of solid advertising type constitutes a square.* ☜

Terms of Subscription.

THE MINING AND SCIENTIFIC PRESS is published every Saturday morning (containing sixteen pages—size of *Harper's Weekly*) at the following rates:

One copy, one year, by mail, in advance	$5 00
One copy, six months, by mail, in advance	3 00
One copy, one year, by express	5 50
One copy, six months, by express	3 50
Five copies, one year, by mail, in advance	20 00
By city carriers, per month	50
Single copies	12½
Monthly Series (or parts), containing 4 Nos	50
Monthly Series, containing 5 Nos	62½

THE CIRCULATION of the PRESS, already extensive, is rapidly increasing, and substantial men who can profit by widely disseminating information of their business amongst the most intelligent, influential and industrial classes of the Pacific States and Territories, find no more effectual or economical medium for advertising.

DEWEY & CO., Proprietors.

Patent Agency and Job Printing Office, 505 Clay street, San Francisco. July 1 1865

Just and True Economy

IN MINING ADVERTISING.

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEES and SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by ONE-HALF than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our Shareholders' Directory forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. A file of copies of the PRESS, bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. Our "Assessment and Delinquency" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

8th. A full list of the copies of the PRESS, bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

9th. The "Assessment and Delinquency" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harper's Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it

DEWEY & CO.,

4v13 Office Mining and Scientific Press.

POSTPONEMENTS.—We would again call the attention of Secretaries to a certain point of the mining law, too commonly overlooked, viz: The requirement that all postponements must be added previous to the expiration of the regular publication of assessment or sale notices.

BACK VOLUMES.

Back files of the MINING AND SCIENTIFIC PRESS, from January 1st, 1864, to the present time, will be furnished at $3 per volume of six months; bound in cloth, $5.

Mining Summary.

CALIFORNIA.

The late storm has enabled the miners everywhere, out of the river beds, to get fully at their winter's work. The gulches are alive with regular mining operations or prospectors. The hydraulic miners are also in their element, and have an abundance of water for their mammoth operations. A new impetus has also been given to prospecting for quartz. Hundreds of new ledges will be opened during the winter, and the soft mountain ground will everywhere be turned up in search of its precious treasure. The owners of extensive placer mines are now calculating on a most successful season's work. It is estimated that there will be at least one-third more placer mining this season than there was last winter.

The renewed interest in our mines, both quartz and placer, by capitalists heretofore noted, is continued with increasing zest, and bids fair to far exceed that of any previous period. A better understanding appears to prevail between labor and capital throughout the State. The Sacramento *Bee* thinks that if the miners will only adhere to their resolution of holding a convention, many obstacles now in the way of their prosperity will be satisfactorily overcome.

A large amount of ores in the rough, copper, gold and silver, are now being sent Eastward, mostly on English account. This has now become a permanent and important feature in the mining business of the Pacific coast, and of California in particular.

ALPINE COUNTY.—We learn from the *Gazette*, published at the town of Monitor, that the Leviathan mine, under the direction of E. Arnold, the newly elected Superintendent, is having a road built from Bagley Valley to the works of this company for the purpose of facilitating the laying in of winter supplies, it being the intention of the company to see the inside of their ledge between this and spring. At a meeting of the Trustees held this week, our old friend William Miller, now residing permanently in Monitor, was elected secretary of the Leviathan company.

The contractors on the Mowyer ledge are engaged in cutting across the ledge, and find it very slow work. The quality of the rock improves as they approach the center of the ledge. As a rule the pay vein of ore in all of our main ledges lies next the hanging wall, the distance to which in this case is not known. All interested are hopeful.

The Mullan Tunnel is now in a little over 300 feet, and by survey immediately beneath the croppings, the distance now to be overcome being merely the dip or pitch, which it is thought will soon be done.

The Silver Mountain *Bulletin*, published at Silver Mountain, gives the annual financial report of Buckeye No. 1, stating the amount of money which has been raised by assessments for the year ending November 11th, 1865, and the manner and purposes for which it has been expended. The example is a good one, and one which should be more universally followed.

The *Chronicle*, published at Markleeville, says that the survey of the route for the contemplated flume from Cary's mill, in this county, to Empire City, Nevada, is being pushed forward with every possible dispatch.

NEVADA.—The *Transcript* says the water mills in and about Nevada have now an abundance of water for power. Mr. Stiles is trying an interesting experiment by substituting stone instead of iron for shoes in his pans.

Some excellent quartz lodes have been prospected in the vicinity of Rogers' ranch, in Deer Creek. The Star Spangled Banner ledge promises to become one of the best in that section. The company will soon have up a first-class 20-stamp mill. The engine has already been purchased in San Francisco.

Some of the Nevada county papers are complaining, because the proprietors of the old Pittsburg claim in Nevada, residents of this city, allow that valuable mine to stand idle. It was last worked by Weeks & Co., on a lease of three years, at $150 per month. They took out $120,000 in the last eighteen months. The proprietors hold the mine at $75,000.

The Grass Valley *Union* says that the mine of Messrs. Welsh, Shurtleff & Mather, on Slate Creek, is being vigorously worked. The proprietors of the Kate Hayes mine, located on Kate Hayes Hill, are quietly but steadily pushing work in their claim. They have now an incline down one hundred feet, and have commenced the erection of machinery for hoisting and pumping. This machinery will be first-class, and will cost some eight thousand dollars.

A cake of retorted gold, valued at $3,000, is reported as the result of one week's crushing of rock from the Scudder Flat mine. Another cake, valued at $1,800, was the proceeds of forty lodes of rock from the Home mine, in Wood's Ravine, on Deer Creek.

The Hydraulic Mines.—The hydraulic miners in the vicinity of Quaker and Hunt's hills are commencing work. One set of diggings in Sargent & Jacob's claims have already been started, and three will soon be ready. The Dutch company have already commenced work, and a numbers of others are almost ready.

The Manzanita Hill claims have also been started. Maltman & Co. have water enough in their own ditch, and several large streams are plying against the bank. Work is started on these claims unusually early, and no doubt a large amount of gold will be taken out this season. Williamson & Co., owners of the Lost Hill claims, will resume work in a few days. Last season, these claims, which had not been worked for six or eight years were fitted up at an expense of four or five thousand dollars. This winter the claims can be worked to good advantage. The miners on Gold Flat have commenced operations. At Moor's Flat and all the way down the Ride to French Corral, water is abundant and everybody is busy.

Excelsior District.—Prospecting at Summit City has been suspended for the winter. Nearly all have left the place except those who propose to winter there. The owners of the California mill have made arrangements by which they will be able to continue running all winter—at least they will not be stopped by either cold weather or deep snow. Mr. Tibbetts, the enterprising express-man, has made arrangements by which he will be enabled to keep the residents there in communication with the outside world, until the returning spring shall again unlock the icy gates of winter to ordinary traveling. We trust his experiment will prove as profitable as it certainly is enterprising and daring; for it is no small thing to brave the winter storms of the upper Sierra.

PLUMAS.—The Crescent Quartz company, according to the Quincy *Union* of the 25th instant, had cleaned up during the previous two weeks over $17 000. The rock from the third level proves much richer than any hitherto taken from the mine. This level is one hundred and ninety-five feet from the surface. Another shaft has been commenced directly on the ledge at this depth, which is now sunk about twenty-five feet, and shows an increasing richness as they descend—the ledge still retaining the same thickness. This company has now fifty-six stamps running, and still the supply of rock seems inexhaustible.

YUBA.—We learn from the Marysville *Appeal* that the Sweet Vengeance company has resumed work, by letting a contract for sinking a new shaft. The same paper learns that during the week about 250 shares in the Pennsylvania company have changed hands at from $15 to $20 per share. The sellers are few, and at the rate of $15 there are evidently more buyers than sellers. Twenty dollars and upwards is generally asked.

The reputation of the Brown's Valley mines is evidently working to the "upper grade."

TULARE.—The Hate mine, in Clear Creek district, Tulare county, has been sold to Messrs Loveland, Hagerman and others, of San Francisco, for $20,000. The round sum of $100,000 has been offered and refused for the McKeadney mine. Neiswander, Pard and Donald have some fine leads on Neiswander Hill, which they are working with a 5-stamp mill, and clearing about $5,000 every week. Shafts are sunk on some of these last-mentioned leads to the depth of 175 feet.

VIRGINIA CITY AND VICINITY.

The Virginia City *Enterprise* says that prospecting in the State of Nevada is at rather a low ebb at present, and there will be but little done in the more snowy regions till spring.

We are able to glean but very few mining items of any especial interest, this week, from the Virginia papers. The *Enterprise* says that it has long been the conviction of many that an exceedingly rich quartz vein must pass through Cedar Hill, north of the town. The reasons for thinking so are that float rock full of free gold abounds on the eastern slope of the hill, and that the dirt on that side of the hill pays with but a small head of water $100 per day to the hand for washing. Although a considerable amount of work has been done on the hill, up to the present time the lead from which all this gold rock came has not been found. Teams are at present engaged in hauling rock and dirt to mills on American Flat from the old hydraulic diggings for crushing. There is a difference of opinion as to whether this rock and dirt comes from the top of a lead running through the hydraulic claim, or whether it is float or a slide from a lead above; but, be this as it may, it is certain that there is an exceedingly rich vein somewhere in the hill, which, sooner or later, will be found.

Some two or three companies on Cedar Hill are getting out ore for crushing.

A force of four men are now at work upon the Utah mine, drifting in ground hitherto unbroken, in search of the continuation of the Comstock vein.

The Gold Hill *News* says that a lot of rock from the Mammoth ledge, in Eagle district, has been received at Gold Hill to be worked by mill process. The rock looks well, and resembles Gold Hill top rock. An assay went upwards of $800. The company have a tunnel in some 900 feet, and think that in a short time they will strike the ledge. Several companies are at work in that district, running tunnels into their respective ledges. The impression appears to be that the mines in that district have a fine prospect ahead.

The experiment of working over the old quartz tailings below Gold Canon promises to prove a decided success. The editor of the *Union* has been the recipient of 6.78 ounces of amalgam, the proceeds of one thousand pounds of these tailings, worked by Mr. A. Basset, with his new barrel process, at his mill, in seven-mile canon. From experiments lately made by Mr. Basset in working tailings, the process that he is now using will undoubtedly prove a success.

REESE RIVER.

We give from the *Reveille* the following digest of the mineral resources of Lander county, prepared from the annual report of Charles O. Barker, County Assessor. He says that gold, silver, copper, sulphur, lead, iron, and almost every other mineral, are found within the limits of the county. Coal has not yet been found. There is one extensive salt marsh which is being successfully and profitably worked. An excellent quality of limestone is found in almost every section. The number of silver mines is legion; those most developed are about Austin. Some of the lodes are two hundred feet thick. The deepest incline as yet does not exceed 300 feet. Water is found at from 50 to 100 feet. The cost of milling ore average $75 per ton. There are now in operation in the city sixteen steam and three water-power quartz mills. He finds it impossible to give the whole number of mining companies, wild-cat, and otherwise.

The Ruby district, located about 100 miles north-east of Austin, is very highly spoken of. It contains an abundance of water, abounding with fish and fowl. It was discovered and located by Mr. Tennehill and party, who located twenty nine ledges for the Austin Mining company. The ledges are large, varying from five to twelve feet thick, and are generally found in feldspathic granite, and in slate and limestone. Assays have been made of the ores obtained from fourteen of the ledges, and they all exhibit silver in handsome quantities.

The Twin River district, according to the *Reveille*, continues to attract attention. Prof. J. E. Clayton, Mr. Clink—agent for parties in London—Col. Rust, and Mr. Herman Camp, of New York, and other persons of note, have recently visited and inspected the district with the view of purchasing mining property. The Murphy ledge is being worked with a large force, under the superintendence of Captain Shears. All the machinery for the company's mill had arrived. Work is progressing with energy and system on several other ledges, and the result generally is very gratifying. Some forty or fifty men will be employed during the winter on the different mines.

The Yankee Blade district has lately been visited and carefully examined by Mr. M. Angel, formerly editor of the *Reveille*, and a gentleman well qualified to judge correctly in mining matters. His report was more particularly devoted to a series of ledges belonging to the Hibernia company, eleven in number; but also contains general allusions to many other mines in the district. The mines generally are reported as promising rich developments, requiring only time and a reasonable amount of capital to prove their value.

In the San Francisco district the Liberty mine is said to present the largest body of rich chloride ore yet discovered in the entire Reese River country. No sulphuret ore has yet been found in the district.

The Nye County *News* mentions as a heavy mining transaction, the report that James P. Sargent, President of the Toiyabe Mining company, has sold to Col. Rust, on account of Eastern capitalists, four ledges situate in the Twin River district, the celebrated Vulcan, generally accounted one of the best there, going among the number. The precise terms of the sale have not been made public, but it is understood that they are such as are likely to prove advantageous to both parties, the erection of a 20-stamp mill on the part of the purchasers being a part of the consideration.

The first bullion from the Silliman ledge, on Union Hill, was recently produced. The ore was reduced at the California mill, and consisted of 500 pounds of first-class ore and 4,115 pounds of second-class ore. The assay of the pulp of the first-class ore gave $1,316, and of the second class, $165 of silver to the ton. The bar weighs 664 ounces, and is valued at $703 11. This valuable mining property belongs to a Boston company, of which Thos. D. Johns is Trustee, and Captain Alpheus Smith, Agent.

ESMERALDA.

Aurora, it would appear from the following summary, has neither been removed or burned, both of which disasters have recently been reported of it. We learn from the Esmeralda *Union* that Wells, Fargo & Co., a few days since, shipped from their office in Aurora four bars of bullion from the Diana claim at Blind Springs, which were worth, per assay, $1,990. The Diana is one of the richest claims in the world, and if it continues to pay for a few months as it is paying now, will make its owners wealthy.

A pack train arrived the same day from Silver Peak, loaded with fifteen boxes bullion from Martin & Co.'s claim—the aggregate weight of the bars being 1,050 pounds, and the estimated value about $40,000. At the time this amount was sent in the company had fifteen boxes more at their mill, which they could not ship for want of the means of transportation. This is all from one small mill. Next year, when larger and better mills shall have been erected out there, the Silver Peak country will astonish the world.

The Silver Peak district is located about 120 miles southeast from Aurora, on the eastern slope of the Red Mountain range. Although there are supposed to be many valuable mines there, as yet but few have been worked to any considerable extent. The mill above referred to, of Martin & Co., is, we believe, the only mill yet erected there. This mill runs ten stamps of 500 pounds each, and six of Verney's puns with their settlers.

The other claims in the vicinity are the Pocatilla, very rich on the surface, with a chimney out-crop of 150 feet across and 300 feet long; the Astor, Empire State, Confidence, Hudson, and Oakland, all, we believe, belonging to Martin & Co., and all said to be very promising lodes.

The Citizens' Prospecting Association made arrangements with the Golden Age and Empire company for the purchase of a suitable engine, hoisting and pumping apparatus, to be placed on the deep shaft, when the work, which has been temporarily suspended on account of water, will be resumed and vigorously prosecuted to completion.

The proprietors of the Coaster claim have made a new strike, and found another small vein on Last Chance Hill, from which they are getting some very rich ore.

HUMBOLDT.

The Montezuma, says the *Register*, is turning out considerable quantities of fine ore, though working light-handed at present. The boys will not rush the work much till Webber gets his mill and furnaces in running order, so as to make early returns from ore worked by him. At a depth something over 100 feet the ledge is a little over six feet, solid mineral, worth near $200 to the ton. The Montezuma will turn out more bullion next year than any ledge outside of Arabia.

More discoveries are announced in the Arabia district. Rutherford, Whitmore, and other Arabians, while burning coal, at the spring some five miles west of Arabia, made discovery of a remarkable ledge. It is fifty feet wide, apparently of solid quartz, and the quartz bearing ores of antimony, copper, lead, and silver. It has the appearance of being rich in silver, but no test has yet been made.

On the Jersey lode work is going on better than on any other ledge in the county. The Atchisons are putting it ahead in a business-like style—working from five shafts, and taking the ore to the Etna mill as fast as taken out. The ledge is six feet between casings, and solid ore—the red ore of the Montezuma. Shafts have been sunk to different depths within the past three weeks—one forty feet, one thirty eight, one twenty-four, and the others seven to eight feet deep—in different parts of the ledge. In all the walls are found good, well cased with clay, and the ledge solid mineral, as described. An incline will be started into the ledge next week. Work on this lode is being prosecuted under the energetic management of Mr. Geo. W. Fox, as superintendent.

Mechanical.

THE MODERN AGE OF IRON.

Most emphatically is the present an age of iron. By the use of this metal has man, within even the lifetime of the present generation, been able to impress into his service many of the forces of nature, which, till the dawn of the present century, were scarcely more than known to have an existence. The hidden power contained in wood and coal, and developed through the medium of steam, has been known to man from the earliest period of history; but never, until his mechanical genius had devised a way for the ready and cheap production and manipulation of iron, could he have contrived a harness within and by which it might be controlled and made his servant, as obedient and willing as the merest child. Without the improvements latterly introduced into the manufacture of iron and steel, the world must long have been kept back in the same old jog-trot rate of progress with which it moved, up to the commencement of the present century. Less than one hundred years ago iron was employed only in the manufacture of a few simple tools and appliances, such as were necessary to resist great wear or strain. Perishable wood was the almost universal material employed for constructive purposes. What a vast change has taken place within the last fifty years! Now we are hauled along with an iron horse, over an iron road, at fifteen or twenty times the speed formerly obtained over common roads. We go to sea in iron ships, and fight our naval battles in iron boxes, impervious to cannon of twenty times the destructive force of those with which our fathers fought. We live in iron houses, build iron fences, get our water from iron mains and pipes, and light our dwellings in the same manner, without the use of lamps. We build iron bridges, and even construct a track for the lightnings of heaven, across continents and under seas, of this same omnipresent iron. We stretch out our iron arms to bind together States and nations, and insinuate our tiny nerves of iron into a perfect net-work of electrical communication, by which our wants are conveyed, with the speed of thought, to the uttermost parts of the earth! Most emphatically is this an iron age.

Every one of these instances of immeasurable results, now fully realized, and hundreds of others in store, have been accomplished directly out of comparatively insignificant modifications of well known principles and means—all having direct and special reference to iron. For thousands of years the human race had moved quietly along, satisfied with the knowledge of employing this useful metal in the manufacture of a few of the most indispensable articles of trade and commerce, and hiding what little they did know of it among the secrets of art. From the present day back to the time of the Hebrew Samuel, when "there was no smith found throughout all the land of Israel;" by reason of which all the Israelites were compelled to go "down to the Philistines, to sharpen every man his plowshare and his coulter, his axe and his mattock," all the progress in the art of producing and manufacturing iron, is but a mere hagatelle in comparison to the result of Mr. Bessamer's recent discovery for converting iron into steel, and thereby increasing its durability and value for commercial purposes. It is a most astounding fact that this first successful attempt to improve upon the ancient method of accomplishing this work should date back but a single decade; and it is almost as much a matter of astonishment that the idea of converting iron into an alloyed metal of some twenty times its ordinary strength, as noticed by us last week in the article descriptive of ferro-manganese, should have been deferred to within about the same time.

The efforts, however, of Messrs. Bessamer & Kruff, in one direction, and those of Mr. Mushet and Dr. Preiger in another, would never have been consummated, or possibly even conceived of, had it not have been for the late extraordinary demand for iron and steel to meet the growing wants of this progressive age.

Work and Inventions.—Mr. Mills tells us in his "Political Economy," that the labor saving inventions of modern times have not yet lessened the daily labor of mankind. The steam engine does the work of about one thousand millions of men—more men than are in the world—and this inconceivable addition in the world's working force has all occurred in ninety years; yet no man finds his day's work diminished by it. On the contrary, we work harder than we did ninety years ago, and hardest where there are the most steam engines. The farmer on our western prairies, by the aid of the mowing machine, gets in, in one week, a crop which his father could not have got in by working till the grain dropped over-ripe from the straw; and then he thrashes, in six hours, more than his father could have flailed out in a whole winter. But he works harder than his father did, winter and summer. Ladies have made the same remark upon the sewing machine; they can sew at a pace that would have made their grandmothers gape to see, but their sewing is never any nearer *done* than it was when they set every stitch by hand.

We believe it will be so to the end of the chapter. We do not believe that any possible development of invention will ever much lessen the amount of human toil. As long as the world stands, we think the world will daily require, for carrying on its business, its entire daily revenue of force.

Iron and Steel Manufacture.—Prof. A. L. Fleury of New York, who recently contributed a series of valuable articles to the Oil City *Register*, Pa., is now in Europe and promises another series of papers descriptive of the various new processes of iron and steel manufacture and other matters of importance to manufacturers or miners, that he may meet with in his travels. The last number of the London *Mining Journal* says: A process for increasing the strength of cast-iron by the addition of an alloy of zinc, lead and tin, in the proportion of about 7 per cent. has been presented to the Franklin Institute by Prof. A. L. Fleury. This process is patented, and the amalgam prepared by Mr. W. M. Arnold, of the United States Composition Iron Company, New York. Prof. Fleury also described a process of manufacturing steel analagous to that of Bessamer, in which the decarbonization of the cast-iron was effected by introducing into it, while melted, pulverized oxide, whose oxygen served to combine with and remove the excess of carbon.

To Prevent Corrosion of Iron.—Mr. Neil McHaffie, of Glasgow, has patented the following process, and claims that "wrought-iron thus prepared, and without being coated or painted, on being immersed for a length of time in sea-water, is found to be free from shell-fish or marine animals, and also in a great degree free from corroson." He surrounds the iron with oxyd of iron or manganese or zinc, heats the whole to a full red heat, and keeps it hot for many hours, cooling it gradually.

There are a mile and a half of iron-clads now laid up in the Delaware River, at League Island—a mile and a half of warships whose ports are closed, whose guns are silent, from whose escape pipes no steam curls upward to the air. These vessels, which have done the country so much service, are practically dismantled, and left to rest in peace until they are again needed.

The Great Branches of Labor.—The great American branches of labor are as follows: Blacksmiths, 112,357; Carpenters, 252,958; Clerks, 184,485; Farmers, 2,423,895; Farm hands, 785,679; Laborers, 969,301; Miners, 147,750; Shoemakers, 164,680; Servants, 559,908; Tailors, 101,808; Teachers, 110,469.

Improved Iron.—We see in the London *Builder* a statement from a New York paper that Mr. J. D. Williams, of Pittsburgh, Penn., has made a sample of iron that bears 166,700 pounds per square inch, tensile strain. We have not seen any mention of the matter in any American journal.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

Office of the Mining and Scientific Press—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be witheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The office secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against citizens of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we a cause thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequaled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, as may be required; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first instalment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the owner.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc., and our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos... $10
On every application for a design, for seven years... 15
On every application for a design, for fourteen years... 30
On every application for a patent, for seventeen years... 15
On every caveat... 10
On issuing each original patent... 20
On filing a disclaimer... 10
On every application for a re-issue... 30
On every additional patent granted on a re-issue... 30
On every application for an extension... 50
On the grant of every extension... 50
On appeal to the Commissioner from Examiners-in-chief 20
On every appeal to the Judges of Circuit Court, D. C... 25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, No. 505 Clay street, corner of Sansome, San Francisco.

Hot-Air Engine.—MM. Burdin and Bourget have presented for the opinion of the Academy of Science of France a plan of hot-air engine, from which they believe an economy of at least one-half the fuel may be obtained, and which they desire to construct and experiment upon at the expense of the Government. The plan has simplicity at least. "Let there be an ordinary furnace, such as is used for steam engine boilers, the products of combustion of which escape into the chimney, after descending along an inclined pluns. Let the atmospheric air be first compressed to two atmospheres in small parallel tubes lodged in the fine, the air entering at the lowest point, and consequently rising." Then follows a very rational calculation of the length and diameter of the tubes necessary, and a more complicated account of the engine. The theory is excellent; if it should succeed in practice we will return to it.

Raising of the U. S. Frigate Cononess—A Great Mechanical Feat.—The wreck of the frigate Congress, which was sunk in Hampton Roads during the encounter with the rebel ram Merrimac, about four years ago, having been raised now lies at the Norfolk (Va.) Navy Yard. She sunk in about 30 feet of water and the men who have been employed in the raising worked with 20 or 30 feet of water over their heads. The wreck was laden with large tanks full of water, cables, anchors, hundreds of barrels of provisions, large quantities of powder, shot and shell, in her forward magazins, and in addition her decks were occupied by many bushels of oysters. The action of the tide had filled her almost up to the top with sand.

The divers commenced their operations upon her by carrying off the ragged and torn timbers at the point where she was blown in two, and having made them square, built a complete bulkhead, closing up entirely the end of the ship, and making it tight—working all this while under water. The water was then taken from her by steam pumps, and the great ship rose to the surface. The contents of her hold are now being removed, and already over 100 tons of chain cable have been taken from the wreck. The contractors for raising the vessel will make a profitable job of it.

Pronuction of Steel.—The proceedings o the Franklin Institute notice a process for the production of steel directly from the ore, proposed by Mr. G. Hand Smith, of Philadelphia. Pure oxide of iron, such as the magnetic oxide, for example, is crushed, washed, and packed in layers alternating with charcoal in the ordinary cementing furnaces; after heating, a porous mass is obtained, which may then be rolled into plates.

Trevithick invented and built the first English locomotive that worked on a railway; and Roberts was the first to build a locomotive with such mechanical skill that it could work without enormous cost for repairs.

Square Cannon Balls.—The Emperor Napoleon has ordered trials to be made with a new square-mouthed gun, which has been invented by an officer of the French navy.

Steam engines to the value of £990,671 were exported from Great Britain during the first six months of this year, as against £733,155 in the same period of last year.

The immortal old frigate Constitution, on her recent voyage from Newport to Annapolis, notwithstanding her age, passed everything on her route, going at the rate of thirteen and a half knots an hour, and acted as though she would like to have another bout with her old foes.

Plumbago.—The Dayton *Tribune* has seen a beautiful specimen of pure graphite taken from a well-defined ledge four feet thick and encased in the hardest of granite, twelve miles below Dayton, on the Carsou. The specimen cuts and writes equal to that in Faber's best, and was taken out at three feet from the surface.

Mining and Scientific Press.

W. E. EWER, ... SENIOR EDITOR.

Terms of Subscription:

One copy, per annum, in advance, ... $5 00
One copy, six months, in advance, ... 3 00

☞ For sale by Carriers and Newsdealers. ☜

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for Inventions can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For references, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

VIEWS OF PRACTICAL MINERS---THE ANCIENT GRAVEL BEDS OF CALIFORNIA.

We clip the following interesting and suggestive article from the Sonora *Herald*, in which paper it appears as a communication over the signature of "S. B.":

As a practical miner, I have often been led to wonder why it was that there has not been some mode adopted for a more free interchange of opinion between the geological corps in the employ of the State on the one hand, and the intelligent portion of that class of citizens on the other, that are engaged in bringing to light the hidden mysteries of the earth's interior. The common miner occasionally meets with existing facts, which are quite likely to escape the knowledge of the geological corps, which if known to them might throw a fund of light upon mooted questions in geology.

That most of the Placer gold of California was once, or is now, included in the debris of an ancient drift, extending the length of the region of the placer mines, is a fact perhaps known to the common reader of the journals of the day. Now, it may fairly be held that questions touching the age of that drift do not effect the question of the existence of gold within it, or the probable amount; but in the interest of science it is of immense importance that its geological age should be established.

Immediately above the auriferous gravel which forms the underlying portion of this drift, is a sedimentary formation, the cretaceous appearance of which, in many places, seems to stamp it as identical with the chalk series; yet its fossil botany (exhibiting as it does dicotyledonous plants of the present order) indicates that it is one of the more recent of the tertiary formations. Notwithstanding the fact of its tertiary character, however, there are facts within the knowledge of the miner, that stamps the period of this drift as being anterior to the time when this region was inhabited by that huge species of mammalia known as the mastadon. The whole region of the placer mines was once covered by a drift from the north, running at right angles to, and in disregard of, the present course of our mountain streams. The drift was at least fifty miles wide, and therefore must have been the deposit of an oceanic current; since which time the western slope of the Sierras has been gradually raised, until now the central portion of the drift is about two thousand feet above the level of the sea, and exhibits a dip to the westward. The raising of this plateau above the water level, and the immense elevation of its eastern margin, has given the water passing over it immense denuding power, and has caused the stream to cut deep gorges, and has carried toward the sea much of the debris of the drift, leaving the gold it contained in the beds of the streams. These gorges are frequently cut deep into the rocky crust of the earth, hundreds of feet below the bed of the drift, exposing a bluff composed of the varied quantities [classes?] of hypogeneous rocks, of which primary limestone is the one I propose to notice. The drainage thus afforded has had the effect to establish springs along the margin of the bluffs, and where it flowed from limestone, coming (as water flowing from limestone always does) charged with lime, this lime is precipitated when exposed to the absorption of atmospheric oxygen, forming travertine or calcareous tufa, immense depositions of which are now going on along the bluffs of some of our mountain streams. The springs that I have described were the most accessible points for the wild animals inhabiting the region to obtain drink; and here the bones of the elk, the Indian, and the mastadon are found buried beneath the travertine beds that I have described; while high on the hill above the miner is disemboweling the ancient drift—tertiary though it be.

Near Gold Springs, and also near Springfield, both in this county, are large deposits of this travertine, from which numerous bones of the Indian, as well as the mastadon, have been exhumed. Why should our savans ransack Europe, and be left in ignorance of facts that can be demonstrated at our very doors?

REMARKS.

We have often wondered at the fact, that the intelligent, practical miners, who are so frequently met with among the hills and gulches of the Pacific slope, do not oftener communicate to the public their observations, and more freely interchange opinions with regard to the great interest of mining in which we are all so deeply interested. We have often been both interested and instructed by conversations with intelligent, practical miners, and can bear evidence with the writer above quoted, to the fact that observing miners, who have never made the science of geology a study, except so far as they have found it written out by the slow-moving finger of time, on the broad pages of Nature, often meet with important facts which have escaped the observation of the the scientific geologist. As we write, we have a case in point in our mind, where our present geological survey was, and one in which any survey, circumscribed in time and means as they are, would probably have been led widely astray, had it not have been for the accidental communication of the observations of a practical student of nature, who had examined a certain field more closely and leisurely than it would have been possible for the survey to have done. Other like cases, no doubt, exist in the history of this, and probably all similar scientific corps, which have ever been organized to examine a field already occupied by active industry.

It is always with pleasure that we receive the practical ideas and suggestions of our correspondents in the various fields of mining enterprise; and we know that we have the thanks of our numerous readers for placing such information before them. We also make it a point to note every thing of the kind which we find in the columns of our cotemporaries, and give such information the benefit of a wider and more extended circulation among miners throughout the State than any local paper can hope to attain.

It is much to be regretted that the State Geological Survey has not been so organized as to give at least a preliminary report upon the great auriferous drift which is made the subject of the article, which we give above, from the Sonora *Herald*. Although it may not be so important, in a scientific point of view, as have been the learned and undoubtedly valuable researches of the survey into the paleontology of the State, we are, nevertheless, fully of the opinion that even a mere superficial examination of this interesting field of research, with a carefully-written report, would have proven of so much practical value as to have placed the survey at once upon such a high altitude of popular appreciation as to have secured for it all that could have reasonably been asked in the way of legislative appropriation for its future progress.

By far the largest portion of the placer gold that is now taken out in the State, is obtained from this remarkable deposit, which must at one time have been spread over almost or quite the entire western flank of the Sierra Nevada, extending from the extreme southern portion of Tulare county on the south, to Shasta on the north, and from the foot-hills to the very summit of the Sierras. It has long been known that much of the southern portion of this drift has been covered, to a greater or less depth, with volcanic debris, of which Table Mountain, near Sonora, is a most noted example; and more latterly the same has also been found true of its northern extremity. The plateau of the Sierra Nevada, or high table-land of Plumas and the eastern part of Shasta, we are told, is covered with a volcanic deposit, which has buried the golden sands of the ancient drift still deeper in places than they are found beneath Table Mountain,—so deep, that the miners can reach it in a few places only, where the streams have cut through this debris to the underlying rock, upon which the auriferous deposit rests. In all the intermediate region we also see, at frequent intervals, immense masses of volcanic ash, in what is known to the miners under the general name of cement and pipe-clay, reminding us of the immensity of the volcanic action which has, at a comparatively recent period, wrought such changes in the topography of the entire State.

This ancient drift deposit, which has supplied the greater part of the gold which has been, and still continues to be, taken out of our rivers and gulches, covers probably 1,000 or 1,500 square miles of territory—not a twentieth part of which has yet been even prospected! The chief part of the gold found in this deposit lays upon the bed-rock, and more abundantly in broad channels or narrower ancient river courses. The broader channels, seemingly, partake something of the bayous or feeders to the more direct and continuous river beds. The country through which these rivers ran was, probably, at first quite level. Their fall, very likely, was gradually increased by the slow subsidence of the present Pacific Ocean shore, rather than by the upheaval of the Sierra Nevada, as "S. B." of the Sonora *Herald*, seems to think. For the elevation of that range was due probably more to contractive than upheaval forces.

But it was not our intention, at this time, to theorize upon the matter. It was rather our design to call attention to its magnitude and importance as a field of research, in connection with California's great leading industry. A topographical and geological mapping out of this region, giving the relative bearings and bed-rock elevation and depression of the different points already explored, with the directions of the secondary drift movements, etc., could not fail to be of vast service to miners and prospectors in their search after the precious metals.

It is to the deep diggings in this drift that we are hereafter to look for, perhaps, nine-tenths of all our placer gold. If this field of exploration is outside of the limits of that of the present survey, the State, in our opinion, could not do a greater service to the mining and to the public interest at large, than to appoint a special survey for this specific purpose.

We should like to hear from some of our mining friends upon this subject. There are a large number of intelligent, practical miners engaged in this class of mining. Their opinions with regard to the probable utility of such an outlay would, at least, be interesting. Would it, or would it not, *pay*—aside from its scientific aspect? Our own impressions are that it would. What say you, men of the hydraulic hose!

MINING EXPERIMENT.—Mr. Stiles, of Nevada is trying an interesting experiment at his mill in that city. He has substituted *granite* shoes in one of his pans, instead of iron, and intends to thoroughly test the relative economy and efficiency of the two materials for such use. It is claimed by many experienced miners that stone is much superior to iron.

PAYING WITNESSES.—A number of sailors, who had been detained as witnesses against the captain of the whaling bark Mercury, were, last week paid for their time, at the rate of one dollar per day, by United States Marshal Rand, in accordance with an order of the United States District Court, issued by Judge Hoffman.

THE RAIN FALL FOR NOVEMBER.—We believe the month of November just passed, has witnessed the largest fall of rain throughout the State, of any other month since a correct record has been kept, with the single exception of November, 1861, when a fraction over 17 inches fell, according to records kept in Grass Valley and Nevada. The fall for the present year has been reported as follows, in the localities named:

	INCHES.
San Francisco	2.67
Healdsburg	10 00
Grass Valley	11 97
Nevada City	12.79

The late storm appears to have been much more severe in the northern portion of the State, than in the central or southern; for while the upper Sacramento and Feather rivers rose to a greater hight than they have attained for several years, the Yuba and American, and other rivers further south, were less affected than has heretofore been the case.

It is to be regretted that records are not more generally kept throughout the State, so that the inequalities of the rain fall in the various sections may be more fully noticed. The Oakland *News* expresses the opinion that more rain falls in that neighborhood than in San Francisco, and regrets that no one there has a "rain guage," by which the fall may be tested. If our cotemporary will procure a common tin lard can—the deeper the better—and place it in an open situation, at a distance from any house or tree, where the rain can fall into it unobstructedly, he will have a "rain guage" which will answer a very good purpose, where no better can be had. We have kept such a guage, and found that by carefully measuring the water which fell into it, we kept exceedingly close tally with a regularly constructed instrument. A strip of glass graduated to eigbths of an inch, and set into a removed section of the side of such a vessel, will greatly facilitate the measurement of the rain fall.

THE RUSSO-AMERICAN TELEGRAPH.—The Russo-American Telegraph fleet, which, aided by a land force, has been engaged during the past summer in exploring the northwestern coast of this continent, and seeking out a track across the narrow strip of ocean, just south of Behrings Straits, for the proposed telegraph which is to place Europe, Asia and America in direct electric communication, is now at anchor in the harbor of San Francisco. The entire fleet consists of five vessels, viz: the steamer Gen. S. Wright, the barques Golden Gate, Clara Bell, Palmetto, and the schooner Milton Badger, all of which are now in this port, where they will remain until spring. The two first mentioned arrived here on Thursday; the Golden Gate is the flag-ship of the fleet; she is commanded by Capt. C. M. Scammon, of the U. S. Revenue Service, and by especial authority from the Secretary of the Treasury, is permited to bear the revenue flag while engaged in this service. The expedition, during the summer, has accomplished all that could have been desired in furthering the great enterprise in which it is engaged, great energy has been displayed, much progress made, and a large amount of information gathered, of especial value to the company and of no little importance to the cause of science. Col. Bulkley, the Chief of the expedition, arrived on the George S. Wright.

INSURANCE AGAINST ACCIDENTS.—This particularly new feature in the American Insurance business seems to meet with popular success. Its benefits are so self-evident that we are not surprised at the fact. The NEW YORK OCCIDENTAL INSURANCE COMPANY insure against death or injury by accident. In case of disablement a weekly compensation is provided, and in the event of a fatal injury, a fixed sum is secured to the family of the assured. The rates of premium are light, and within the reach of all prudent-minded individuals of all classes. Messrs. Bigelow Brothers, corner of Montgomery and Sacramento streets, will receive applications for policies, and politely furnish any further information that may be desired about this class of insurance.

THE CALIFORNIA OIL INTEREST.

It is stated that there are now in California about seventy-five associations organized and actively engaged in exploring for oil, with an aggregate capital of $50,000,000. Some thirty-three of this number are located in Humboldt county, about twelve in Colusi, and the balance scattered through other counties, on both sides of the coast range, and extending as far south as Los Angeles county. The chief interest appears to center in Humboldt county, where the largest number of wells is in progress, and where the highest natural grade of oil is produced; although the most copious natural flow and the best surface indications generally, are found in the counties south of San Francisco.

We understand that six barrels of oil were pumped from the Lexington well, on Wednesday last, the accumulation, we suppose, of several days, and yet the oil was not exhausted. That well is now 425 feet deep. The collector of the second district, in which this well is located, reports that 191 barrels of petroleum, of 45 gallons each, were produced from the various wells in that district during the month of October. We have nothing definite of late, from any other wells to the south of this city.

From the Humboldt *Times* we learn that in the

MATTOLE DISTRICT

The Mattole Creek Company are just starting their well. The Petroleum Company are putting in new pipe, preparatory to pumping out the oil which they have struck in considerable quantities. The Joel's Flat Company, better known as "Noble's well," have oil in paying quantity and are preparing to put in their new pump. They are down 270 feet. The Brown & Knowles Company are progressing well, and have good indications.

The Yosemite, in Upper Mattole, is just commencing to work with machinery. The Sacramento, on Conklin creek, is in progress; the Buckeye, on the same stream, has a shaft sunk and machinery nearly ready to commence boring. In digging the shaft they cut oil for a great portion of the distance down. The Jeffrey well, down 240 feet, has flattering prospects; the Sutter & Allen wells on McNutt gulch, four in number, are looking finely.

The Comet, located on Langdon's creek, is down sixty feet, and has abundant evidence of oil. The Irwin Davis well, on the North Fork of Mattole, is 250 feet deep. The Knowlee well is down about ninety feet. The Mattole Petroleum Company, (McNeirs') east of Joel's Flat, at 170 feet depth has a fine prospect of oil.

The Union Mattole Co.'s wells, three in number, are in depth respectively as follows: Number one, 135 feet, from which they are taking about 100 gallons of oil daily; number two, 167 feet, has oil in small quantity; number three, twenty feet deep. The Paragon, adjoining the Union Mattole, next above, has reached the depth of about ninety feet and affords every promise of success.

BEAR RIVER DISTRICT.

The Hawley Company are down 210 feet, with good indications; Webster Company, down 125 feet, and doing well; Dick Johnson Company are down 100 feet, with indications sufficient to justify the expectation of striking pay oil at any moment; Jennings Company on Oil Creek, are commencing operations again with a new drill of the Fargo pateat—prospects good; Elk Horn Company is now sinking a shaft—already down 78 feet; Wm. H. Smith, on the Cassin Farm, 270 feet; the Fortuna, on the Webster Farm, 130; Kirk's, on the Richard Johnson Farm, 100 feet; the Jenning's, eighty-five feet, and the Oil Creek Company's well, one hundred and seventy feet. The last two are each about commencing another well. All the above named companies in the Bear River District have every encouragement that success will ultimately reward their labors. The *Times* learns that the Union Mattole Company has about one hundred barrels of oil on hand at Centreville and at the well.

"THE LIGHTNING DISENGAGING EYE."—Last Saturday there were several successful experimente made with this novel and useful invention under the direction of the inventor, Mr. Samuel Brown, on board the United States steam revenue cutter Shubrick, Capt. Andrews, in presence of a large number of scientific men and members of the press. All who were present expressed their unreserved satisfaction with regard to its success, and its value for the purpose for which it was designed. At first the invention was attached to the cutter (small boat) fore and aft, secured to the keelson, having cords attached to the levers, which disengaged the "eyes," by means of a ring in the center of the boat. The lower hook of an ordinary bont tackle was inserted in these eyes, the Shubrick placed under a full head of steam, the cutter lowered near the water, and at a given signal by Lieut. Metcalf, the ring was lifted, when the little craft dropped into the water along the steamer's side, gracefully cutting the water and shooting far ahead as if striving to out-do the speed of the steamer itself. Again, the eyes were taken from the keelson of the cutter, and attached, as in the ordinary way, to the tackle, and the boat lowered and dropped into the water with the same signal results as before described. The Shubrick steamed up, passing the shipping in the harbor, Mr. Brown making several launches amidst the salvos and clapping of hands by shipmasters and others congregated to witness its effect.

The inventor has applied for letters patent through the MINING AND SCIENTIFIC PATENT AGENCY, and has assigned one-half interest in his invention to Mr. Leon Level, a gentleman well known in our midst as one who accomplishes whatever he undertakes to perform. Mr. Level sailed in the last steamer for the East to place this inveation before ship-owners in the Atlantic States.

A further and still more practical test of this inveation was given upon the departure of the steamship Golden City on Thursday last. A boat belonging to the Shubrick was attached to the Golden City by means of Brown & Level's patent detaching apparatus. When off Meigg's wharf, and the steamship was under full speed, Capt. Bradbury gave the word of command, when the boat was instantaneously lowered and detached without the slightest difficulty or danger.

WASHOE MINING ASSOCIATION.—This association, the preliminary steps to the formation of which we have already noticed, was fully organized on Monday evening last, by the adoption of a Constitution and By-laws, and the election of the following officers for the first term of its existence: President, P. L. Buckminster, of the Imperial. Vice President, John B. Winters, of the Yellow Jacket. Secretary, L. B. Hastings, of the Savage. Treasurer, J. A. Ralston, of the Bank of California. Surveyor and Mineralogist, Mr. Stutch. Directors, Louis Janin, of the Gould and Curry; Wm. Blanding, of the Ophir; Thomas G. Taylor, of the Crown Point. The association is made up of the superintendents of the various mines in Storey county, Nevada. The movement is a most excellent one, and should be imitated in every important mining district on the coast.

READINGS.—A few evenings since, in company with some friends, we listened to a short series of readings, from several authors, by Mrs. Weaver, wife of Rev. A. J. Weaver, of this city, which, for compass of voice and inimitable style of execution, is scarcely surpassed by first-class public readers. Her recitation of "Hiawatha," by Longfellow, and "Floyd Ireson," by Whittier, fully expressed the meaning and ideality of the characters of the different actors in these persons. We understand that Mrs. Weaver intends soon to give the people of Stockton a chance to hear her read in public

ALTITUDES IN PLUMAS COUNTY.—The *Union* says Quincy is above the level of the sea 3,178 feet; Meadow Valley, 3,701; summit between Meadow Valley and Buck's Ranch, 5,328; Buck's Ranch, 4,998.

LIST OF OFFICERS OF MINING COMPANIES AND INCORPORATIONS.

[PUBLISHED IN THE FIRST ISSUE OF EACH MONTH.]

[Below we give the date of recent meetings held in this city and the names of officers chosen or appointed. Every business company is invited to send us the result of their election, to be thus put on record, gratuitously, with any other facts of general interest.]

COLORADO M. & M. Co.—November 13th. Trustees: Charles McCormick, A. J. Coffee, G. M. Burnham. President, A. J. Coffee; Secretary, G. M. Burnham; Treasurer, G. M. Burnham.

CONFIDENCE SILVER M. Co.—November 15th. Trustees: J. Greenebaum, Wm. Surryhne, S. B. Whipple, J. E. Clark, Edward Barron. President, J. Greenebaum; Vice President, S. B. Whipple; Secretary, R. Wegener; Treasurer, Agency Bank of California; Superintendent, John Nelson.

FLORIDA G. & S. M.—Nov. 1st. Trustees: John C. Morrison, Jr., A. J. Bryant, F. W. Crosby, G. S. Bradley, Albert Miller. President, John C. Morrison, Jr.; Secretary, John Gorman; Treasurer, John Gorman; Superintendent, George T. Terry.

GOLD CANON CONS. M. Co.—Nov 15th. Trustees: A. C. Whitcomb, Isaac Glazier, Edward J. Pringle, Andrew E. Thayer, and J. W. Stephenson. President, A. C. Whitcomb; Secretary, Josiah H. Applegate; Bankers, Tallant & Co.; Superintendent, John Rule.

LADY BELL M. Co.—Nov. 23d. Trustees: D. A. Macdonald, S. Williams, J. McNerny, J. McGill, Jno. W. Farren. President, J. McGill; Secretary, C. Heywood; Treasurer, D. A. Macdonald.

SANTIAGO M. Co.—Nov. 28th. Trustees: S. Heydenfeldt, L. Maynard, W. E. Barror, A. E. C. Peachey, Chas. Mayne. Secretary, S. Heydenfeldt.

TRIUNFO G. & S. M. Co.—September 6th. Trustees: Edw. P. Flint, Geo. L. Keuny, C. S. Capp, Jas. W. Towne, Geo. C. Potter. President, Edw. P. Flint; Secretary, Edw. Quackenbush, 24 Government House.

YANKEE BLADE M. Co.—November 22d. Trustees: J. P. Greenman, W. H. Forbes, W. T. Atwood, D. E. Avery, W. P. Prichard. Secretary, H. B. Forester.

RECENT INCORPORATIONS.

OCEAN VIEW PETROLEUM Co., State of Cal. Nov. 1st. Trustees: Emil Grisar, Adolph Wapler, Spencer W. Clark, Oscar Steinbach, Frederic Lewis.

HAYWARD PETROLEUM Co., Santa Barbara Co., Cal.—Nov. 7th. Trustees: George H. Wheeler, Wm. O. Mills, A. I. Easton, A. N Coleman, A. Hayward.

PACIFIC CONGRESS SPRINGS, Santa Clara Co., Cal.—Nov. 9th. Trustees: O. P. Griffin, A. I. Easton, W. G. Graham, Samuel Knight, A. Hayward.

MOUNTAIN PETROLEUM Co., San Fernando District, Los Angeles Co., Cal.—Nov. 24th. Trustees: Thom Coles, G. C. Clarke, James Walsh.

MISSION CREEK NAVIGATION Co., San Francisco. Nov. 21st.—Trustees: Donald McLennan, Henry Keyser, Claus Spreckels, John Center, I. N. Thorne.

THE PROPOSED MINERS' CONVENTION.—In accordance with the suggestion of some of the more captious of our cotemporaries, who give various (disinterested?) reasons for not accepting the time and place suggested by us for holding the proposed Miners' Convention, we have referred the matter of the "Call" to the association lately organized in this City and known as the "Mining Bureau." That body, we presume, will carefully consider the question, and issue a call for the assembling of a convention when and where, in their judgment, it may seem best. If they act in the matter, and we trust they will do so, we shall heartily and earnestly urge the meeting of the miners as they may suggest. We look upon an early meeting in convention, of the miners of this State, for the consideration of the general welfare of those who represent that industry as a matter of the utmost importance, and shall do whatever lays in our power to bring it about and make it a success.

FAMILY LAUNDRY BOOK.—This is a convenient memoranda book for the purpose indicated by its title. Published by A. N. Rood & Co., price twenty-five cents.

QUINCY HALL continues to sell a large share of the best and most fashionable clothing disposed of by the trade in this city.

What "They Say" of the Mining and Scientific Press.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the Press, and would like to have a full file.—[Napa Reporter.

The public should support the enterprise of the MINING PRESS, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

Under the management of Messrs. Dewey & Co., the Press has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

A good paper for this country.—[Humboldt Register, Nev.

Those who would have a good paper of this character, should subscribe now.—[Marysville Appeal.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will be second to no scientific record now published on this continent.—[Los Angeles News.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The Press fills the bill.—[Reese River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

Interesting and important to miners and Mountain men.—[Butte Record.

The publishers intend to make it the "Scientific American" of the Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information as to pick and shovel fraternity.—[Trinity Journal.

Should be taken by every man owning "feet" [and brains] in this State.—[Beacon.

In no other ten journals can the reader find the same amount of reliable mining news as in the PRESS.—[Contra Costa Gazette.

Every stockholder in different mines will find it will pay to take and read this mining journal.—[Contra Costa Gazette.

The PRESS is to the Pacific Coast what the "Scientific American" is on the Atlantic. It deserves its success.—[Aurora Daily Times.

It is fully up to the times, and furnishes the latest mining improvements and intelligence.—[Calaveras Chronicle.

Every miner should subscribe for the PRESS.—[Calaveras Chronicle.

It presents a channel through which all mining notices may be cheaply consolidated into one sheet for the convenience of all stockholders.—[Mountain Messenger.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics.—[Placer Herald.

ENGRAVED TO ORDER.—Persons who desire to illustrate their individual establishments or business, should give us their orders for Engraving and Printing, and we will guarantee good work and reasonable prices.

DEWEY & CO.,
Patent Agents, Publishers and Job Printers, 505 Clay st.

WILLIAM P. BLAKE,
MINING ENGINEER,

Will make Surveys and Examinations of Mines, or give advice regarding their working, the erection of Machinery, etc.
Office at Union Iron Works, corner of First and Mission sts., or Lock Box 2,077 Post Office, San Francisco.

MINING BLANKS
For Sale
AT THE
OFFICE OF THE MINING AND SCIENTIFIC PRESS
No. 505 Clay Street, corner of Sansome.

Blanks for Mining Companies, Secretaries, Shareholders and others, always on hand, or printed to order, at our office.

Among others are those of the following forms:

Shareholder's Proxy.

Know all men by these presents, that I, ... do hereby constitute and appoint ..... my attorney and agent, for me and in my name, to vote as my proxy, at a meeting of the ..... Mining Company, to be held ..... 186 , according to the number of votes that I should be entitled to cast were I there personally present.

In witness whereof I have this day hereunto set my hand and seal. .....[Seal]

Dated 186

Assessment Notice.

..... Company

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the ..th day of ..... 186 , an Assessment of .....per share was levied upon the Capital Stock of said Company, payable on the ..th day of .....186 , in United States gold and silver coin to the Secretary.

Any stock on which said Assessment shall remain unpaid on Saturday, the ..th day of ....., 186 , will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on ....., the ..th day of ....., 186 , to pay the delinquent Assessment, together with the costs of advertising and expenses of the sale. By order of the Board of Trustees.

.....Secretary.

Office.....

NOTICE.—There are delinquent, upon the following described Stock, on account of assessment levied on the ..th day of ..... 186 , the several amounts set opposite the names of the respective shareholders as follows, to wit:

Names.	No. Certificate.	No. Shares.	Amount.
Theophilus Thisllo	23	14	$140 00
Peter Pipe	2	3	30 00

And in accordance with law and an order of the Board of Trustees, made on the ..th day of ....., 186 , so many shares of each parcel of said stock as may be necessary, will be sold at the.....
....., on ....., the ..th day of ....., 186 , at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

.....Secretary.

Office.....

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled, by mail or express, as may be desired.

GUNPOWDER.—Mr. L. Ehrhardt, of Bayswater, proposes to take about equal parts of tannic-gallic acid or resin, or chlorate or nitrate of potash finely powdered; these ingredients when mixed together form a highly explosive compound, but taken separately are perfectly inexplosive and harmless; this mixture is well adapted for blasting purposes, and is not patented.

As pictures are slid into a magic lantern, and reflected upon a wall, so many people think God slides graces into the heart, and that man's life only reflects them. But graces are not interjected pictures. Their forms and colors are the substances of the heart.

To Delinquent Mining Companies.

We hereby give especial notice to the Secretaries, Trustees and Shareholders, of such Mining Companies as are owing us bills for advertising of OVER SIX MONTHS STANDING, that we shall commence action, according to law, to collect the amounts due, if the same are not immediately settled.

DEWEY & CO.,
Office Mining and Scientific Press, Nov. 25, 1865.

Notice.—The interest of E. D. Waters, Jr., in the job printing firm of Dewey, Waters & Co., has been purchased by A. T. Dewey. The business of the late firm will be continued under the title of "MINING AND SCIENTIFIC PRESS JOB PRINTING OFFICE."

San Francisco, November 18, 1865.

Deserved Testimonial.

GRIZZLY FLAT, Oct. 18, 1865.

MESSRS. HEWGERFORD & HENLY—*Gentlemen:* We have run your Concentrator for several days past, in our 5-stamp Mill, and, as far as can be ascertained at present, it is a perfect success. When running at the rate of from two hundred and ten to two hundred and twenty-five revolutions per minute, we have lost neither quicksilver nor sulphurets. Formerly, when using copperplate riffles and blankets, we found that in spite of the utmost precaution, quicksilver would escape over them all. Wishing you all success, we remain Your obedient servants,

E. A. BIGLER.
17v11qy S. F. DAVIS.

Metallurgy.

EUROPEAN METALLURGICAL WORKS,
—AND—
Practical Mining School,
Bryant Street, Between Third and Fourth,
SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

S. P. KIMBALL, J. R. MURPHY.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the Press, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

NEW YORK PRICES.

Economy in Advertising.—The MINING AND SCIENTIFIC PRESS is the best and most economical mining advertising medium in this city. Our terms are less than ONE HALF the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The PRESS contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

Machinists and Foundries.

H. J. BOOTH. GEO. W. PRESCOTT. I. M. SCOTT.

UNION IRON WORKS!
Corner First and Mission streets,
SAN FRANCISCO.
ESTABLISHED IN 1849.

HAVING INCREASED OUR FACILITIES IN EVERY Department, we are now prepared at the shortest notice and at the most reasonable rates, to furnish all kinds and description of Machinery, including Steam Engines, Quartz Mills, Mining Pumps of all kinds, Hoisting Gear, Gas Work, Laundry Machinery, Architectural and Ornamental Castings, Sugar Mills, Saw and Flour Mills, Water Wheels of all kinds, Hydraulic, Hay, Rag, Screw and Drop Presses, Coining Machinery, Pile Drivers, Bark and Malt Mills, and all kinds of Castings.

Engines.

Marine Engines, Oscillating and Beam; Stern and Side Wheel Boats, Locomotives, Stationary Engines, Horizontal, Upright, Oscillating and Beam, from six to fifty inches diameter. Also, Scott and Eckart's Adjustable Cut-off Regulator—best in use; W. R. Eckart's Balance Valve for Stationary Engines; Woodward's Patent Steam Pump and Fire Engine.

Boilers.

Locomotive, Flue, Tubular, Upright, Cylinder and Cornish, and every variety of Boiler Work. All sizes of tubes and pipes for pumps.

Amalgamating Machinery.

Wheeler & Randall's improved Tractory Curve Pan, Zenas Wheeler's improved flat bottom pan, Beldin's pan, Veatch's tubs, Prater's concentrators, Wahlee's pans, Beers' pan, German Barrels, Arastra Scrapins, Chile Mills, Settlers of all descriptions, Retorts of all sizes and shapes, for Silver and Gold, Portable Stamp Mills, Straight Batteries, for wood or iron frames, Dry Crushing Batteries, or machines with the latest improvements, every variety of Stamps, Mortars, Cams, Pans and Tubs.

BLAKE'S PATENT QUARTZ CRUSHERS, of all sizes.

Oil Boring Tools and Machinery,

Of the latest and most approved construction, made from drawings lately made by Prof. Blake at the oil wells in Pennsylvania.

We have the facilities for working gold and silver quartz and other ores, to test their value, by the hundred weight or ton.

Russia Iron Screens, of all degrees of fineness and of all qualities of iron.

All work done in the best manner at the lowest cash prices.

21v10 **H. J. BOOTH & CO.**

Miners' Foundry
—AND—
MACHINE WORKS,
First St., between Howard and Folsom Streets,
SAN FRANCISCO.

EVERY description of Iron and Brass Machinery, the BEST and MOST ECONOMICAL, manufactured in the State of California, will be furnished with dispatch at the MINERS' FOUNDRY AND MACHINE WORKS, such as

Steam Engines and Boilers, Flour, Saw and Quartz Mills,
Machinery, Mining Pumps, Amalgamators,
Retorts, Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

*** Parties desiring to test their ores practically, in small quantities, will be afforded ample facilities, FREE OF COST.

All parties desiring accurate and highly finished drawings and superior Machinery, at most reasonable rates, are cordially invited to call before contracting elsewhere.

HOWLAND, ANGEL & KING.

Vulcan Iron Works Company
[ESTABLISHED 1850.]
First, Natoma and Fremont Streets.

IRON FOUNDERS,
Steam Engine and Locomotive BUILDERS,
Boiler Makers, and Workers in Sheet Iron, Brass and Copper.

Removed from Oregon street, between Front and Davis.

CHEAP INDELIBLE INK.—The following is the recipe for the indelible black ink, for marking linen used in the Prussian military hospitals. One drachm of indigo in fine powder is dissolved in half an ounce of the strongest oil of vitrol (Nordhausen), which solution is diluted with half a pint of water, and digested with iron filings until the acid is saturated. The liquid, after pouring off from the remaining iron, is mixed with a decoction of four ounces of bruised galls, and two of ground logwood in a pint and a half of water, boiled down to one pint. Enough green vitrol is then added to make the ink black, and finally one ounce of gum arabic and half an ounce of sugar to give consistence.

A WOMAN in Ayr, Scotland, found in the centre of a potato a gold wedding ring, which the ambitious tuber must have inclosed in the process of growth.

OUR NEW YORK AGENCY.

Mr. GEO. M. NEWTH is our authorized agent in New York City, and will receive advertisements and subscriptions for the MINING AND SCIENTIFIC PRESS at regular rates. The proprietors assure their patrons that the Lick House shall not be excelled in any of its appointments, or in polite attendance or attention to all the comforts of its guests.
15v1t

HENDY'S
IMPROVED BLOW-PIPE.
This Convenient Helpmeet
—TO THE—
ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the PRESS of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth piece and the pipe, enabling the blower to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continous current of air is forced from the nozzle of the pipe by the more contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

Price, Complete.....$5.00.

THE PACIFIC IRON WORKS,

First & Fremont Sts., between Mission & Howard, San Francisco.

The proprietors of the above Works invite the attention of all parties interested to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting Machinery of the most approved construction. Flour, Saw, and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated

Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully Solicited.

MITCHELL'S
COMBINED
FAUCET AND MEASURE.

This is one of the most useful inventions of the day, and is destined to go into universal use on this coast, as it has in the Eastern States.

The invention consists of a combined Faucet and Measure, so arranged that the liquid contents of any cask or other vessel can be drawn and accurately measured without the use of measures or funnels other than such as are embraced in the Faucet itself. While it obviates altogether the use of measures, it operates much more perfectly than the old method of drawing and measuring such liquids as have a tendency to foam up when drawn, as coal oil, linseed oil, etc.

The Proprietor has made arrangements with GALLAGHER, WEED & WHITE, of the California Brass Foundry of this city, for the manufacture of this Faucet, and is prepared to furnish the article or sell territories. Here is a chance for men with small capital to invest in a good business.

COMMERCE OF THE PLAINS.—The Leavenworth *Bulletin* says that more than 50,000,000 pounds of freight have been shipped from Leavenworth across the plains this year. This is only a small part of the vast stores sent from the various points on the Missouri river to the mines of Montana, South Boise, Colorado, and to Mexico and Salt Lake. The draught animals that started from Leavenworth amounted to 70,000 head of cattle, and 50,000 mules and horses.

A BIT OF TELLING PHILOSOPHY occurs in a late address by the eccentric George Francis Train, where he says:—"England comes here, takes our cotton, carries it from our seaboard on an English ship across the ocean, over an English railway thirty miles to Manchester, manufactures it by English capital, and brings it back on an English railway and an English Cunard steamer, to our shame, be it said, to clothe the Fenian Brotherhood of America!"

W. S. MCCORMICK, the inventor of the famous reaping machine now generally used in the Western prairies, and by which he made an immense fortune, died lately in the Illinois State Lunatic Asylum.

Calendars for 1866.—The MINING AND SCIENTIFIC PRESS Job PRINTING OFFICE is prepared to execute every manner of Counting-house Calendars and advertisements for various business men, on short notice and moderate terms.

MINING LAWS AND FORMS.

Third Edition revised and enlarged.

Compiled by H. H. CONGDON.

THIS Edition contains all the laws of the *STATE OF CALIFORNIA* and *NEVADA TERRITORY*, relative to Mining Corporations together with the Mining Ordinances of Mexico, complete; Digest of Decisions of the Supreme Court; Forms etc. 16 mo. flexible cloth, 192 pp. $2.50.

Published by H. H. BANCROFT & CO.

New Mining Advertisements.

Continued Mining Advertisements will be found under another head

Chipionena Mining Company, District of Ures, Sonora, Mexico.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 2d day of November, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Buzzolini, D	11	30	$150 00

And in accordance with law, and an order of the Board of Trustees, made on the 16th day of October, 1865, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, by Messrs. Olney & Co., at No. 626 Montgomery street, San Francisco, Cal., on the 24 day of December, 1865, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

AUGUST KUNAST, Secretary.

Office, 540 Washington street. nov18

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements at their earliest convenience. Now advertisements should be sent in as early as possible.

Oroville Gold, Silver and Copper Mining Company.—Location of Works: Oroville, Butte County, California.

Notice.—The Annual Meeting of the Stockholders of the UNITED STATES MINING COMPANY, will be held at the Office of the Company, on Monday, December 25th, 1865, at 3 o'clock, P. M.

J. M. BUFFINGTON, Secretary.

San Francisco, November 25th, 1865. no25

United States Mining Company---Location, Virginia, Storey County, Nevada

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 15th day of November, 1865, an assessment of fifty cents per share was levied on each and every share of the capital stock of said Company, payable immediately, in gold or silver coin of the United States, to the Secretary, at his office, or to F. A. MARSTON, Virginia, Nevada.

Any stock upon which said assessment shall remain unpaid on the 16th day of December, 1865, will be advertised as delinquent, and unless paid, will be sold on Saturday, the 30th day of December, 1865, to pay said delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

J. M. BUFFINGTON, Secretary.

Office, No. 10 Government House, corner Sansome and Washington streets, San Francisco, Cal. nov18

Wide West Gold and Silver Mining Company, Silver Mountain District, Alpine county, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 11th day of November, 1865, an assessment of one dollar ($1) per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at his office, or to the Superintendent at the mine.

Any stock upon which said assessment shall remain unpaid on Saturday, the 16th day of December, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 30th day of December, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

JOSEPH GREEN, Secretary.

Office, 330 Davis street, corner of Washington street, San Francisco. no18

Wide West Mining Company, Esmeralda District, Esmeralda County, Nevada.

And in accordance with law, and an order of the Board of Trustees, made on the 18th day of October, 1865, so many shares of each parcel of said stock as may be necessary will be sold, at the salesrooms of John Middleton & Son, No. 404 Montgomery street, San Francisco, on Monday, the 4th of day December, 1865, at the hour of 12 o'clock M. of said day, to pay said delinquent assessments thereon, together with costs of advertising and expenses of sale.

J. P. DAVIS, Secretary.

Office, No. 103 California street, San Francisco. no18

Yuba Gold and Silver Mining Company, Brown's Valley, Yuba County, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of November, 1865, an assessment of two dollars and fifty cents ($2.50) per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, No. 210 Pine street, up stairs, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 16th day of December, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 30th day of December, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

P. R. RINGSTROM, Secretary.

Office, 210 Pine street.

N. B.—The above assessment is for the purchase of Machinery, nov18

Office Zenith Gold and Silver Mining Company, Mountain Ranch District, Calaveras County, California.

At a meeting of the Board of Trustees, held November 6th, 1865, it was "Resolved, That all previous assessments levied upon the stock of this Company, being

No. 1, September 24, 1863—25 cents per share;
No. 2, October 13, 1863—20 cents per share;
No. 3, December 2, 1863—30 cents per share;
No. 4, January 8, 1864—$1 per share;
No. 5, May 3, 1864—50 cents per share;
No. 6, August 15, 1864—50 cents per share;

be, and the same are hereby annulled and declared void, and that all moneys paid to the Company on said assessments be placed to the credit of the stock on which it was paid, and apply as a credit upon the next assessment levied by the Company. By order of the Board of Trustees.

M. G. ELMORE, Secretary.

Office, No. 7 Stevenson Block, San Francisco. no11 4w

Zenith Gold and Silver Mining Company, Mountain Ranch District, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 6th day of November, 1865, an assessment of three dollars and twenty-five cents ($3.25) per share was levied upon the assessable stock of said Company, payable immediately, in United States gold coin, to the Secretary, No. 7 Stevenson Block, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 9th day of December, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 23d day of December, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

M. G. ELMORE, Secretary.

Office, No. 7 Stevenson Block, San Francisco. nov11

Book Printing should be considered and treated as one of the higher branches of the "Art of Arts," and its execution entrusted only to experienced and intelligent workmen. Strict attention will be given to all orders for BOOK AND PAMPHLET PRINTING entrusted to the Mining and Scientific Press Job Office.

To Blacksmiths.

An excellent, strong lad, from the interior, 17 years of age, desires to learn the Blacksmith's trade. His parents wish him to engage with a reputable firm, and learn his business thoroughly. Address, or inquire at the office of the MINING AND SCIENTIFIC PRESS. 2v11tf

BE ALIVE.—This world is not made for a tomb, but a garden. You are to be seed, not a death. Plant yourself and you will sprout. Bury yourself, and you can only decay. For a dead opportunity there is no resurrection. The only enjoyment, the only use to be attained in this world must be attained in the wing. Each day brings its own benefit; but it has none to spare. What escapes to-day is escaped forever. To-morrow has no overflow to atone for the lost yesterdays.

DEWEY & CO., Publishers.

QUARTZ OPERATOR'S

HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,

Authors and Publishers.

BOUND IN CLOTH—144 PAGES, DUODECIMO.

THE QUARTZ OPERATOR'S HAND BOOK is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

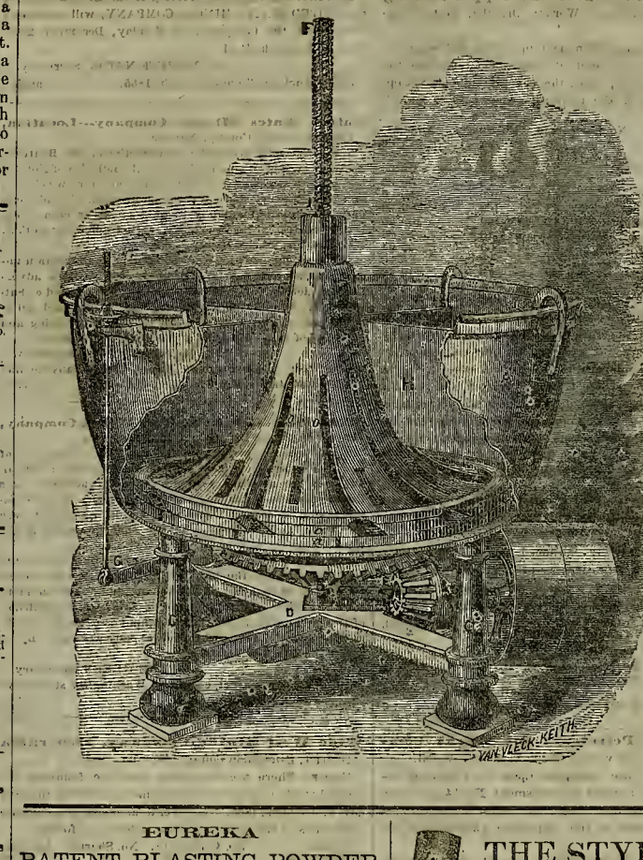
The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. F. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable QUARTZ MINER'S HAND BOOK.

The Table of Contents of this book will be found on pa 415 of the MINING AND SCIENTIFIC PRESS of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11



THE EXCELSIOR

GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings.

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

IDAHO ITEMS.—The Idaho papers afford the following: Mining is carried on successfully this season, at Idaho City, and the creeks adjoining Matthewson & Ingersol are working about ninety hands, and cleaning up from $3,000 to $4,000 every 24 hours, on Moore's creek. Friend & Allen's, and other claims, are also paying largely on the same creek. The work on the Chickahominy or the Cobden Company's mine, is progressing very rapidly. The machinery is all on the ground and winter quarters nearly completed. The Union Gold Mining Company's mines (the Astor, United States and other ledges) are being speedily developed, and buildings erected for the reception of the machinery, which is on the road.

THE swan subdues the eagle when he attacks her on her own element; so that the weakest may subdue the strongest too if he but keep his place and do his duty.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government requirements and revenue laws, as well as other new and imperative regulations. These discrepancies, although resulting from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with some but active and experienced solicitors. The MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

ELECTROTYPE CUTS, ENGRAVINGS, ETC.—Our Job Printing Office is abundantly supplied with elegant engravings, ornaments, and other embellishments to suit the various branches of industry in this State.

To Printers.

We have for sale, at a bargain, a Second-hand Half-Medium (largest size), Ruggles' Engine Job-Printing Press, of most approved pattern. It is in excellent condition, and warranted to work as good as new. Apply soon, at the office of the MINING AND SCIENTIFIC PRESS. 19v11tf

Removal.

The Office of the MINING AND SCIENTIFIC PRESS has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive JOB PRINTING OFFICE.

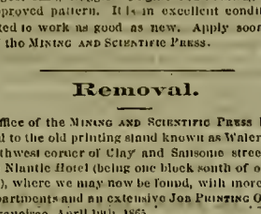
San Francisco, April 10th, 1865.

New Volume

—OF THE—

Mining and Scientific Press

Issued every Saturday. Each number contains 16 pages and 64 columns (size of Harper's Weekly).



PUBLISHED BY

DEWEY & CO.,

Patent Agents, Publishers and Job Printers
505 Clay Street, San Francisco.

THE ELEVETTH VOLUME

Of the MINING AND SCIENTIFIC PRESS commences under advantages most gratifying to its publishers, who assert, with pleasure, that a continued improvement in this journal may be anticipated by its numerous and rapidly increasing readers.

We shall continue to devote a large space in our columns to the various and best methods of treating ores and saving gold and other precious metals in every form, furnishing valuable hints to millmen, prospectors, oil-workers and miners generally, not to be found in any other publication.

New machinery, latest inventions and discoveries, and all matters pertaining to the mechanical, manufacturing and industrial resources of the Pacific States, will receive careful attention.

Stock market reports will be published as received from the official records. Our carefully compiled "Mining Shareholders' Directory" will prove a faithful monitor to parties holding stock, and a desirable record for reference to brokers.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

☞ BOUND VOLUMES FOR SALE. ☜

Machinery.

HUNTER'S
PREMIUM
CONCENTRATOR, AMALGAMATOR
AND SEPARATOR,

Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERATION daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 20 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste free gold and amalgam is amalgamated on the copper plates; not one of ground mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, when with the greatest IRREGULARITY OF SPEED the best of results were given.

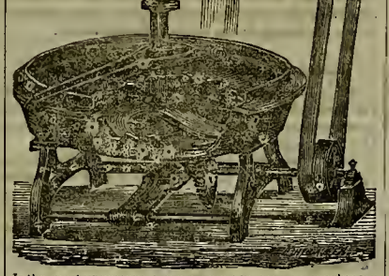
5th. There is no clogging or stopping to clean out the sulphurets and sand; consequently no waste from any inattention on the part of the attendant.

6th. In exhibiting the working of the machine it is not run empty, all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see fit to test the machine with.

Give it a trial, and satisfaction is guaranteed. All orders and any information required, address,

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15v11-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD'S
Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time. It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jeffersonian Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada City; Crail's Gravel Cement Works, Nevada county; Watkinson's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works, Miners' Foundry and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8-6dl

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
— AND —
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th.

Illustrated in the Mining and Scientific Press, April 9th, 1864.

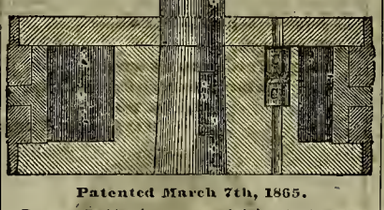
Stevens' Pressure Packing.



Patented March 7th, 1865.

Pressure Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight.

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which now have this packing in use—some of which have been running from three to twelve months without being opened, or showing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Almeda Railroad, or at the VULCAN IRON WORKS, where they can be seen, at any time, in course of construction.

10df **ANDREW STEVENS.**

STOW'S
PATENT CHAMBER DRILL.

The greatest Labor-saving Machine ever invented for Quartz Mining. By using this Drill in shafts, tunnels, and all other rock blasting, three fourths of the labor and over one half of the powder will be saved. The Drill makes a chamber directly at the bottom of the hole, at any depth you wish, six times the area of the original hole, in all kinds of rock, in less time than a man can drill a 2½ hole two inches deep. Requiring no tamping, it will be impossible to have a premature blast.

AT THE STATE FAIR held in Sacramento, September, 1865, a Committee, after examining both the Lincoln and Stow's Chamber Drills, reported as follows:

We, the undersigned, Committee on Mining Tools, do award to Henry M. Stow, of San Francisco, the FIRST PREMIUM for the best Chamber Drill for blasting rock, for the following reasons:

1st. For simplicity of construction.
2d. For durability of drill;
3d. For strength of drill.

The above Drills will be sent to any part of the State for $20, with one set of Cutters or Chisels that will chamber from 75 to 100 holes. Extra Chisels furnished at $2 50 per set.

The Drill may be seen at Mr. BUFFINGTON'S Office, No. Government Block, corner Sansome and Washington streets, and at No. 511 Market street.

Drills will be delivered to any part of this State free of expense to the purchaser. Any information desired, or orders for Drills, address

STOW & COLLINS,
San Francisco

Oil Wells! Oil Wells!!

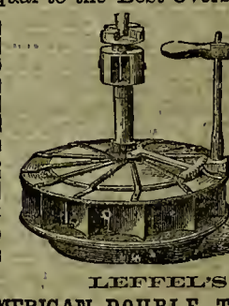
I received at the last STATE FAIR a special Premium for the best Expanding Drill for boring oil wells. The above Drill will bore the hole from ¾ inch to 2 inches larger than the inside of the pipe or tubing of the well, if desired, making the bore perfectly straight and round. The Drill can be attached to mud work with any common drill at an expense of from $25 to $50. I will furnish all machinery for boring, or will take contracts for boring wells, and furnish steam engines and all tools required. Address,

HENRY M. STOW,
14v11 San Francisco.

WATER WHEELS!

Equal to the Best Overshot Wheel

POWER PLEDGED IN EXISTENCE.



LEFFEL'S
AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 80¼. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds, will yield from 10 to 30 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
At Vulcan Iron Works, office 137 and 139 First street, San Francisco. 4v11tf

VARNEY'S
PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is driven down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setlers made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setlers for themselves, at the **PACIFIC FOUNDRY,**
1v1 San Francisco.

New Invention.

ROSENFIELD'S PATENT SAFETY WHIPPLETREE—The greatest thing out. The attention of all owners of Horses and Buggies is called to this valuable LIFE and Buggy saving invention, and which can be attached to all buggies and vehicles without any change in the harness or buggy, and can be easily secured to any carriage in fifteen minutes. The great value of this Whippletree is, that a runaway horse can be instantly detached from a carriage without taking any portion of the vehicle. The public are invited to call and see it, and orders for the Whippletree left at No. 420 California street (northeast corner of California and Leidesdorff streets), Room No. 1, from 10 A. M. to 5 P. M., will be promptly attended to. Letters dropped through the Post Office, Box 1,941, will be promptly and fully answered. 18v11-1m

OIL WELL BORERS.

A CONTRACT WILL BE LET TO A RESPONSIBLE party to sink an Oil Well, as deep as may be required, on land belonging to the "Eel River Oil Company," situated in Humboldt county, Cal. For particulars, inquire at the office of the Company, No. 436 Jackson st., up stairs.

12v11-1m E. H. WILSON, Secretary

The treasure receipts at this city from the interior for the past week, have been $950,000; making an aggregate for the month of November of $4,350,000.

EDITORIAL CHANGE.—Wm. J. Beggs has assumed editorial charge of the *Stars and Stripes*, published at Auburn.

PATENT RIGHT FOR SALE.—The exclusive right for the manufacture and sale of "Hutchinson's Wine and Cider Mill and Press, for the States of California and Oregon, is advertised for sale in another column. It is a valuable patent, and the offer affords a fine chance for business.

Traveling Agent.

MR. ROBERT LATTIMORE is now on a canvassing tour for the PRESS through Butte, Colusi, Tehama, Shasta, and Siskiyou counties, and we recommend him to the favorable consideration of our friends.

Oakland Water-Cure.

APRIL 1ST, 1864, WE OPENED A HYGIENIC BOARDING House and Ladies' Health Institute in Oakland. The great advantage we have experienced since that time, in the treatment and cure of all those diseases peculiar to females, as well as those common to all, over that of San Francisco, induced us to give up the treatment of gentlemen in the city. We have accordingly removed our entire Bathing, Electro-magnetic, and Gymnastic Apparatus, which we used especially in the management made to our Health Institute across the Bay, and have found, after a trial of seven months, that gentlemen as well as lady patients recover, at our Fountain Farm Cure, one-third faster than in the city of San Francisco. The climate here is the most even and bracing to be found in the State. The grounds command a view unsurpassed in the world. The Institution is furnished with an abundance of pure, soft water, from numerous springs; and we now offer to Ministers, Teachers, Lawyers, Singers, Merchants, Mechanics, Farmers, and all other worthy persons, who desire to try the advantage of the only *rational* system of medicine, the hospitalities of our Hygienic Home and Cure. Young men who have become debilitated or lost their health by excessive toil, exposure, or enervating habits, contracted through ignorance of Physical Laws, may with us find more of the encouragements they need, and means that will restore them to health, than elsewhere in California.

We claim for Water-Cure and Hygienic Medication superior advantages over all systems of drug medication in the cure of all disorders, whether acute or chronic, that it is followed by none of those debilitating diseases, such as Piles, Chronic Diarrhœa, Torpid Liver, Constipation, intense Nervousness, Neuralgia, etc., nor those terrible secondary Diseases, known as Varicose Swelling of the Veins, Necrosis, or Decaying of the Bones, Ulceration of the Limbs, Mercurial Rheumatism, Urethal Strictures, etc., which we well know result from the free use of mercury and other metallic drugs, together with calomel and vegetable poisons given to overcome acute diseases.

The Oakland Water-Cure and Eye Infirmary is by far the most complete in its facilities for the cure of all diseases commonly treated in all Eastern Water Cures of any like establishment on this coast, and the only one in California conducted according to the Theory and Practice of the New York Hydropathic College. We use all forms of Warm and Cold Wet Sheet Packs, the Electro-Chemical Bath, Steam Baths, Improved Sitz Baths, Douch Baths, a Patent Spray Bath, and Magic Baths. The last named was in tituted by Dr. Smith with special reference to the cure of those diseases peculiar to miners, namely: Rheumatism, Inflammatory or Chronic, Stiff Joints, Paralysis, Mercurial, Lead, and Oak Poisonings. It is a sure cure for Ague and Fever. It sids more than any other Bath we have yet used in eradicating all kinds of drugs and infectious poisons, and in the cure of all disorders induced by exposure to dampness and water, foul air, absence of light and electricity, recovering metals, the malaria of rivers and low marshy grounds. Where there was a fair constitution left, even when drugs had been applied for months at d years without a cure, we have, in the past seven years, treated successfully the following diseases: Chronic, Inflammatory and Mercurial Rheumatism; Paralysis; Lung, Bronchial and Catarrhal Affections; Diseases of the Heart, Kidneys, Liver; Dyspepsia, Constipation, Erysipelas, Scrofula, Piles, Inflammation of the Bowels, Chronic and Acute Diarrhœa, and all diseases and weaknesses peculiar to males and females. No physician in California is so favorably situated to furnish so many home comforts and hygienic condition that are indispensable to the speedy recovery of nervous and chronic invalids. We have the only truly healthful boarding place in the State for men, women and children, with plenty of saddle and carriage horses for the use of patients and boarders.

To that class of Diseases and Weaknesses peculiar to females, and the medication that Hydropathic or Hygienic physicians employ in their cure, do we wish to call the special attention of patients and their friends. The ease and rapidity with which females suffering from general or special debility, recover in the bracing climate of the Bay, under Hygienic Medication, together with the universal success that has attended the treatment of females at Dr. Smith's Institutions, (both in Sacramento and San Francisco) has induced us to make this class of human affections a specialty of our Institution. We have treated (mostly in the cure), over 300 females, several of whom had been "bed ridden" for months and years, and all have been decidedly benefited, and with but few exceptions, returned to their homes in from two to six weeks, so far recovered as to long or to need a physician. We have never yet learned of a single instance of a relapse into their former condition.

There is not one female invalid in twenty that has been suffering from nervous debility or diseases peculiar to her sex, that cannot be permanently cured by spending from four to six weeks at our Cure, and at the mere cost of $10. This statement we make in confidence, from an experience of the last seven years. From the many who have been treated at our Cure, we have yet to learn of a single regret from husband or wife at the time or means they have expended in Hygienic Medication.

NEW YORK, Aug. 1, 1858.

To all whom it may concern:

This certifies, that Dr. Barlow J. Smith is a graduate of the New York Hygieo-Therapeutic College, which College has a regular Charter from the Legislature of the State of New York, and is authorized to grant Diplomas, conferring on its students all and the same privileges and immunities in relation to the practice of the Healing Art, that are conferred by the Diplomas of any Allopathic or other Medica College in the country.

Dr. Smith has also devoted much attention to Phrenology, especially in its connection with Physiology and Pathology, a portion of the time under the instruction of Fowler & Wells, of this city, and has labored successfully as a teacher and lecturer on these subjects.

R. T. TRALL,
Principal New York Hygieo-Therapeutic College.

To all whom it may concern:

I have known Dr Barlow J. Smith, both in our office a a Student, and a practical Phrenologist in the country, an from what I know of him I can cheerfully recommend him a a real honest, faithful delineator of character, and as such can cheerfully recommend him to the public.

For the good of Science.

L. N. FOWLER, 308 Broadway, N. Y.

Dr. Smith spends a part of each day in San Francisco, attending to family practice and to Phrenological and Physiological examinations at his office, Room 13 Armory Hall up stairs, corner Montgomery and Sacramento street. Office hours from 11 A. M. to 2 P. M. Circulars sent on application. Address,

BARLOW J. SMITH,
20v11tf San Francisco, Box 473.

1852. 1865

Thirteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

THE GOLDEN ERA is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

IN THE GOLDEN ERA,

"THE FAIR LILIAS;"

Or, "LIFE IN DEATH,"

A New Story, by PIERCE EGAN, Author of "The Poor Girl," "The Flower of the Flock," "Lady Maud," "The Snake in the Grass," "Such is Life," Etc.

PIERCE EGAN is undoubtedly the most fascinating and attractive Novelist of the age. His stories are eagerly sought for, read and admired by hundreds of thousands in England and America. "THE FAIR LILIAS; or, Life in Death," surpasses, in exciting interest and thrilling situations, all of the productions of the celebrated author, and is Pierce Egan's masterpiece.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

NEW PERPETUAL CALENDAR.—We received a call on Tuesday last from Mr. W. F. Brockway, formerly of Sonora, who presented us with the neatest thing in the way of a calendar that we have ever seen. It is calculated with the greatest precision, giving the means of determining the date or day of the week of any day in the nineteenth century, without thought, calculation, or hesitation of any kind, and all comprehended in a single page, about eight by ten inches in size. This calendar is arranged on an entirely new principle, and is in truth a mathematical curiosity. There are but seven days known to us by name, and every month, year, or century must begin with one of these days. Seven columns are arranged, the first of which gives the names and numbers of the days of a month beginning on Monday, the second of one beginning on Tuesday, and so through the week. These columns are numbered 1, 2, 3, 4, 5, 6, 7, from left to right. Every day of every year (except leap-years) beginning on a certain day, will bear the same name as the corresponding date of any other year (except leap-years) beginning with the same day of the week. Thus, the year 1801 begins on Thursday, consequently the days of January of that year correspond with those in column 4, which represents the days of a month beginning on that day. The number of the year is written down, and in a horizontal line with it, the names of its months, and the number of the column corresponding to each. In the same horizontal line are arranged the numbers of all other years of the century beginning with the same day of the week (except leap-years). Those years beginning with each of the other days of the week are arranged under these in separate horizontal lines, under the name of each month being placed the number of its corresponding column, which column will be the calendar for that month. A similar table is arranged for the leap-years on the same principle, and the calendar is completed. In using it, we first find the number of the year, under the head of "Years," and passing the pencil along the same horizontal line till it comes directly under the name of the month, the figure there found is the number of the column corresponding to that month, in which the date is readily found.

THE "REVEILLE."—This useful and spirited little daily, published away out on the extreme eastern portion of Nevada, has entered upon its fifth volume. The *Reveille* is one of the most active and useful local journals which reaches our table. The liberal use we make of its columns bespeaks the estimation in which we hold it as a co-laborer in the development of the great mining resources of the Pacific coast.

THE WASHOE MINING ASSOCIATION.

We have already made mention of the conception and organization of this association. We have now before us, in the columns of the Territorial *Enterprise*, the Constitution and By-laws of the association, from which we are enabled more fully to learn the plan and object of the same. The association is composed *exclusively* of the superintendents of the mines on the Comstock vein, and the object appears to be, incidentally, we suppose, to promote pleasant and useful intercourse among said superintendents; but primarily to "induce concert of action in matters affecting the mining interests; to encourage and facilitate the interchange of opinion on subjects connected with the working and development of the mines; to procure from every available source all facts and knowledge, both scientific and practical, that may contribute to the better understanding of the Comstock vein and its accessories; to provide and maintain a library of books, periodicals and papers devoted to mining and scientific knowledge, and to obtain a cabinet of minerals and other curiosities illustrative of the nature and character of the Comstock vein and the surrounding country."

It appears that these important ends are to be gained by holding regular monthly meetings for the transaction of general business, and the discussion among members of matters connected with mining interests in general, and for listening to addresses from scientific persons who may be invited to favor the society in that manner. It is also in contemplation to employ a competent engineer to propose and "keep up the maps (working plans, we suppose, of the various mines) of the association, with the monthly developments made in the mines." It is further provided that this officer "shall procure the necessary data either from personal inspection of the mines or from information given him by the engineers of the various companies. He shall make as many sections of the Comstock vein as will tend to show its structure, and the various bodies of porphyry, quartz and clay seams that are explored, which have in them points of interest to the Association. He shall also be required to collect accurate statistics relating to the production of ores from the earliest time, including the difference in the yield of the ore, the change in their nature, etc. Also, all statistics showing the amount of work done in drifting and shafting in the various mines, the consumption of materials of different kinds, and on all other points of general interest. When practicable the offices of engineer and mineralogist shall be united in the same person, and when this is the case, the salary of the position shall be fixed at $300 per month.

Article VIII of the Constitution says: It shall be the duty of each member of the Association to promote its objects and purposes to the extent of his power; to contribute to the collection of specimens and other objects of scientific interest. On or before the twentieth (20th) day of each month to deposit with the secretary maps and sections of the mine he represents, for the preceding month, upon which shall be indicated, as correctly as possible, the lodes of quartz, porphyry and other contents of the vein, the clay seams, the dip and thickness of the walls, etc., etc., to furnish to the Association all information and statistics in regard to his own mine and the developments therein, as may be practicable to furnish, and may conduce to the beneficial interests of the Association; upon the discovery of a new body of ore to give full information thereof, of the dip and strike of the ledge and other particulars concerning it, with in a reasonable time after such discovery, each member exercising a proper discretion as to what such reasonable time should be, with a due regard to his fiduciary obligations to the company he represents, and to cultivate harmony, good will and hearty co-operation among his fellow members in working out the aims of the Association.

Persons other than the "superintendents of mines on the Comstock vein" may be elected honorary members of the Association, with free access to the rooms, library, etc., except at the regular meetings of the Association, and may at any time, on the invitation of the Board of Directors, participate in the scientific and other discussions having a bearing upon the proper development and working of the mines, and other kindred subjects, but shall have no vote on the conduct of the affairs of the Association.

Persons from abroad of scientific attainments, and others distinguished for mining or mechanical knowledge, may be invited to visit the rooms of the Association by a vote of the Board of Directors, or by the President, and shall during their sojourn enjoy the privilege of honorary members.

The expenses are to be met by an initiatory fee of $200 for each mine, and the monthly dues are to be $25 per month for each member, to be paid by the Board of Trustees of each mine through its Superintendent.

The rooms of the Association are opened to members and privileged guests every day from 11 A. M. to 11 o'clock P. M. The regular monthly meetings will be held on the third Monday of each month. We look upon the association as one which, if fully and properly carried out, with due co-operation on the part of the Trustees and other officers of the various mines interested, must be productive of great good, and one which will do very much toward the out swindling and "inside operations which have hitherto been quite too characteristic of Washoe mine management. We do not altogether see the propriety of confining the association to the superintendents of the Comstock vein" alone; although it is perfectly proper that *some* limit of this kind should be fixed to keep the institution free of wild-cat and purely speculative operations. We have given the object and plan of the organization at considerable length, with the view of introducing fully to the notice of miners everywhere on the Pacific coast, and would suggest that such associations should be formed in every community when it could be made practical. We presume that full and complete copies of the Constitution and By-laws can be had on application to the Secretary of the association.

We understand it is in contemplation to organize a similar association, but more polytechnic in character, among practical miners and machinists, in this city, with the view of mutual improvement for discussions and lectures upon various subjects relating to mining, metallurgy and machinery. The plan embraces the collection of a properly classified mineral cabinet, a library, a reading room, an assay office and a model quartz mill, where all the various processes of crushing, roasting and otherwise treating minerals may be seen, studied and practiced. Such an institution, established here, would be of incalculable value, and might with propriety and public profit be fostered by pecuniary aid from the State, and be made the nucleus and basis of the much needed mining college, about which so much is said and so little done.

THE PRESIDENT'S MESSAGE.

President Johnson's Message is now before the country. It possesses the rare merits of brevity and of being well received by both the two great political parties into which the country now, as ever, is divided; nor do either the radicals, conservatives, the go-betweens who swing loose from all parties, find much ground for criticism. From the comprehensive synopsis which we have examined, the President distinctly shows himself to be a plain, outspoken man—a man for the country, and one as utterly devoid of partisan feeling as one can well be in a government such as ours. He regards the late rebellious States as erring sisters, never fully lost, but now desirous of returning once more to the family altar. In opening the door for their return he speaks kindly, but decidedly; interposes no unnecessary obstructions, but plainly intimates that evidences of future fidelity must be given ere the parental threshold is again crossed by them.

On the question of negro suffrage there is no dodging or equivocation. The Government cannot assume the power of granting the right of franchise to the Freedmen. If that portion of our population will exercise patience and display a sufficiency of manly virtues, they may soon win more from the States in which they reside than the federal government could possibly bestow and perpetuate upon them. The federal power, as in duty bound and constitutionally enabled to do, will protect them in all their newly acquired rights as citizens of a general government.

The Monroe Doctrine is virtually and distinctly affirmed. The President evidently intends that no more French troops shall be sent to Mexico, and that Napoleon shall be either induced or forced to let go his hold upon Mexico before the ides of March of 1869.

The Military Force.—The President informs the country that the military force of the field on the first of May last was 1,000,516 men. Over 800,000 of this number has since been mustered out, and the reduction is still going on. The navy, at the commencement of the present year, had in commission 530 vessels, armed with 3,000 guns, and manned by 51,000 men. The number of vessels now in commission is 117, with 800 guns and 12,128 men. The war estimate has been reduced from $516,000,000, in round numbers, to $33,000,000; which amount is considered fully equal to a peace establishment.

Financial.—The estimated expenditure for the fiscal year ending June 30th, 1866, will not exceed the receipts by a sum greater than $112,000,000; while it is gratifying to learn that the receipts of revenue for the next succeeding year will exceed all expenditures by the full amount of $111,000,000. This amount may be applied to the liquidation of the public debt, which, on the 31st day of October last, was $2,740,854,750. This financial exhibit, we are persuaded, is better than the most hopeful could have anticipated.

Communications.

EPARTMENT We invite the FREE DISCUSSION of all ects—correspondents alone being responsible for theories they advance.

[Written for the Mining and Scientific Press.]

Notes and Comments on the late Earthquake.

BY PROFESSOR ROWLANDSON.

The earthquake which occnrred on the 8th of October last, will ever be a memorable one to tbe then residents of San Francisco. During a residence of ten years in the city many shnkes hnve taken place of greater or less intensity, hnt falling short, as far as the writer's observatione have gone, of phenomena described as occnrring in countries where earthquakes more freqnently occnr. Believing tbat correct views respecting earthquakes are calculated to illustrate the mnnner in which mineral veins are formed, nnd partially filled with their valuable metallic contents, I have for many years, in fact long prior to my arrivnl on this coast, been desirous of personally witnessing an earthquake of intensity sufficient to afford a general impression as to the probable exciting cause which gives origin to the eccentric disturbances of the earth's snrface, such as was witnessed in San Francisco on the occasion under notice. I have felt more desirous to witness such nn event, as on almost all the previons occasions of terrene tremors, in this locnlity, my own impressions of the direction of "the wave" have been exactly the reverse of that reported hy the newspapers. Even on the late occasion, several—probnhly a majority—described the wave as passing in a direction the complete reverse of what I felt it to he.

I have waited to learn what might be reported from distant places, and sufficient time having elapsed to render it improbable that anything new will arise hereafter, I take thie opportnnity of recording my own impressions. Previous, however, to giving the detnils, I wish to call particular attention to one remnrkable fact—namely, that although the earth'e tremor was distinctly felt one hnndred miles north from San Francisco, and possibly exercised an influence at Mount Hood as well as more than one hundred miles to the westward from the Pacific shore, yet singular to relate, no report has appeared that the earthquake was felt south of the southern margin of the hay of Monterey; yet on the northern margin, not twenty miles distant, the earthquake exhibited its most violent and destructive effects—namely, at Santa Cruz and nlong the lower part of the Pajaro river. For the convenience of the distant reader who may be unacquainted with these localitiee, it may be mentioned that Santa Cruz and the Pajaro river lay about one hundred miles, in a direct line, south of San Francisco. Nor were the disturbances felt at any distauce from the coast; no ocean-going vessel having felt them; but coasting vessels, only a few miles from the land, and boats in the bay, felt their effects, which have been almost invariably described as resembling those which would occur if some huge sea monster was making a rubbing-post of the bottom of their different barques. I ehall hereafter briefly allnde to these circumstances, and shnll now proceed to describe my personal impressions and observations.

Owing to indisposition I had not left my bed, and was, consequently, as will be hereafter ehown, lying in a position better calculnted to remark the course of the two chief shocks than the bulk of people at mid-day. In corroho-rution, however, of my own observations, I may mention that a few minutes previous to the occurrence of the ebock, Mrs. R. had come into the room with a newspaper, and for the couvenience of light was reclining nn the bed in an opposite direction to tbat in which I was lying, her head pointing nearly dne east, mine nearly due west—both shocks were felt by me, first at the right shonlder, and thence passing off by the left foot; while Mrs. R. described the feeling as if the wave firet touched her left foot, nnd passed away over the right ehoulder. These facts, together with others which will be hereafter mentioned, have satisfied me that the two great waves of disturbance flowed in a direction from west to east. Previously, however, to the commencement of any disturhance occnrring in that direction, we hoth had our attention drawn to a kind of rubbing and lifting tnking place at the sonthwestern corner of the house, which must he pretty nenrly in a direct line north of the probahly initial point of disturbance, near the month of the Pajaro river. The ruhhing impression was stronger than could he expected to be occasioned by any ordinary-sized animal, and the lifting gave rise to one or two jerking sensations, as though the house and supporting posts had been bodily lifted from the grounn nbout a quarter of an inch, and afterwards snddenly dropped. This caused Mrs. R. to call my nttention to the snbject, inquiring what wus the cause; having simultaneously remarked the circumstance, I gave it, as my opinion, that it appeared like the commencement of an earthquake; sbe replied she thought it was something of the kind. Immediately succeeding the last remark tbe first west and east wave occurred, feeling much the same as what is felt on board a large vessel when a heavy sea overtakes and passes under her without breaking. The second wave, which soon followed, came more ahruptly, accompnnied with something like n sharp blow or thud, which was felt as though coming from immediately beneath, and was immedintely followed by a most indescribahle series of complex motions, ns if the house was dancing in a hroken sea, in a manner similar to tbat in which peas or sand are made to dance on a tambonrine, the bottom of which is being disturbed with slight blows or movements of the finger. At the climax of this singular disturhance, all motion suddenly ceased; the instantaneousness of which was probably as startling as any of the phenomena counected with the enrthquake. Prior to the ceasing of the movements which have been just described, I wns more than once upon the point of rising for the purpose of viewing the hay, and to ascertain what was occurring nt the surface of the earth aronnd me; for I was prepared to see the one greatly disturbed, and the other fissured. I wns however kept in my recumbent position, noting the fantastic flings and jigs which tbe room was makiug in its eccentric fandango.

On rising nnd viewing the bay, to my great surprise nothing unusual was noticenble. As, however, I stood nt a distance of fully one thousand feet from the margin, such an appearance is by no means incompat hle with the observations made hy others sailing over its surface—that it was covered with air bubhles and small hroken waves—both of which facts have been alluded to and reasonably accounted for in articles which have previously appeared in this journal. I have been minutely circumstantial in describing the occurrences as they happened to me at the commencement of the earthquake, in part from a desire to draw attention to the time which it has been stated to have occupied. The conversation named (which was not hurried) must have occupied full if not more than the fifteen seconds commonly attributed as the time which the disturbances occupied. Perhaps, however, the preliminnry, crushing motion from the south has not been included in the fifteen seconds mentioned ns the duration of the earthquake. In fact, excepting some neighbors to whom I mentioned the former circumstance, I have not seen or heard any mention nnde of the grinding or crushing motion alluded to as coming from the south; yet there wns such a motion, and accompanied by a pressure of grent power and intensity, the most marked exhibition nf wbich was displayed by some pieces of the rock, situate on the south eide of a stone-quarry which is opened in Centre street, between Jersey and Hampshire, being thrown out of plnce; and if the buildings, with one exception, together with the cracked walls, occasioned by being built on new and unconsolidated land, are excluded, it will be found that nearly all the damage which occurred took place on the east and south walls of the structures injured. The exception is Popper's building, on Third street, where a large part of the southwest front caved in. This was evidently occasioned more by the giving way of a pillar, or a slight arch, rather than by the earthquake shock. Two gentlemen of my acquaintance were conversing on the opposite side of the street at the time, nnd they describe the affair as a sliding down, apparently, in consequence of some weak part having succumbed, rather than as thrown down by the shock. One gentleman, driving n buggy near the Mission, assured me that he was not aware of the earthquake until informed of it on arriving in the city. Another, passing up Jackson etreet in a railway car, immediately preceding tbe falling of a wall then in course of erection, did not feel the ehock nor become aware of it until he made eome inquiries in consequence of observing several excited groups of people.

The great phyeical phenomenon, however, is the fact thnt from the northern shore of Monterey Bay to Mount Hood, a distance of more than six hnndred miles, the disturbnnces were more or less apparent, terminating at Mount Hood in volcanic action, and at Goose Lake, in the Sierra Nevada, in numerons water-sponts, whilst the shock was not sensible twenty miles sonth of that line.

This description has reached a greater length than I nnticipated, and compels me to omit some other incidents as well as suggestions respecting the erection of huildings, in fnture, in order to avoid accident as much as possible from enrthquakes.

[Written for the Mining and Scientific Press.]

Gold-bearing Sulphurets and their Reduction.

BY JOHN SCOTT, METALLURGICAL CHEMIST.

As much interest is manifested at the present time in the mining community of California, concerning the introduction of an effectual and economical method of extracting the precious metal from the large quantities of gold-bearing snlphurets of iron, which are so extensively found in various parts of this State, and which are almost valueless to their owners because no really practical and cheap method of working them has as yet heen successfully carried into effect, I hnve thought the following remarks in relation to their treatment might be of sufficient interest to your readers to secure a place in the columns of the PRESS. Having conducted numerous experiments during the lnst eight years on that class of minernls, for the purpose of arriving at a solution of the problem of their economical working, I shall ennmerats some of them, and endeavor to point out what I consider to he an effectual method for the purpose, describing first a process of my own invention, which gives the desired result, but which was abandoned by me on account of the grent expense attending it, and the tardiness of the operation. By means of this process the whole of the pyritous matter was converted into magnetic oxide of iron, the precious metnls being left in n "free" state, capahle of being extracted by amalgamation, none being lost during the operation by volatilization or otherwise. I took the sulphurets, mixed them with carbon and placed them in appropriate vessels, excluding atmospheric oxygen, while a current of steam wns made to act on the mixture, it heing maintained at a hright red heat. The use of the carbon wns to render the mnss permeahle hy vapor and prevent fusion of the proto-sulphurets; the hydrogen of the decomposed steam united with the sulphur of the mineral, and was carried off principnlly in the state of sulphnreted hydrogen, while the oxygen nnited with the iron, forming an oxide having the formula $Fe_3 O_4$.

The common method ndopted for desulphurizing the mineral is to roast it, in a finely divided state, with constant stirring, on the eole of a reverberatory furnace, with the assistance of heat and atmospheric oxygen, until it be completely per-oxidised. By means of this metbod the precious metals are "freed," when coutained in bi-sulphide of iron, and may be extracted by well known methods, but unfortunately (this being an almost universally admitted fact) from twenty to eighty per cent. of the precious metals, especinlly gold, is carried off, mechanically, in a fine state nf division, along with the dense fumes of sulphurous acid gas which are generated during tho decomposition of the mineral, and which is lost, unless eome means be employed for its collection.

Another method is the "Chlorination process," which demands, as in the former, a similar oxidation, and hence being subject to the same loss of gold previous to the treatment of the mass by chlorine and precipitation of the gold by proto-sulphate of iron. The gold by this process is obtained nearly pure, in the state of a fine brown powder, which is afterwards melted into ingots, while the silver that was associated with the gold is lost, unless it be afterwards recovered by treatment with some liquid capable of dissolving tbe chloride of silver formed, which would be an expensive process, when the argentiferons metal exists only in small quantities in the alloy contained in the mineral.

Several new "inventions" have been made lately in the shape nf furnaces, to do the work of desulphurizing and oxidizing the sulphurets; but I nm not aware that any have yet answered the expectations of the inventors. Among them I may mention "The Gold and Silver Separating Company's Furnace," (Dr. Hagan's), the performance of which I was requested to examine, in my professional capacity, the result of which may be interesting to many of your readers, and as I have the permission of the party for whom I made the examination to make it pnblic, I will do so.

The object was to ascertain if the mineral operated on (bi-sulphide of iron) was completely desulphurized; if not, to what extent; if any loss nf gold occurred during the treatment; the amount extracted hy amalgnmation, and the state of the refuse after amalgnmation. Samples were furnished me for the purpose. The mineral had been treated in lumps; heat, atmospheric oxygen and super heated steam being used. The mineral wns thus treated, as I was informed, during forty-eight hours. The result of my examinations was as follows:

First—Assay of the crnde sulphurets: Gold $301.72; Silver $3.76=$395.48 per ton.

Second—Analysis of the crnde sulphurets: Gold 0.065; Silver 0.010; Iron 33.570; Sulphur 38.370; Silica (quartz) 26.730.

Third—Assay of the mass after treatment: Gold $329 50; Silver $3.02=$332.52 per ton.

Fourth—Exnmination of the treated mass for sulphur only, which wns found to exist (partly in bi-sulphide of iron and partly in magnetic snlphuret) to the extent of 17.230 per cent.

Fifth—Assay of the bullion extracted hy amalgamation, its weight was 1.47 ounces—Gold 836 fine, value $25.40; Silver 131 fine, value $0.25; full value $25.65.

Sixth—Assay of the tailings $146.12 per ton.

From which I conclude that nearly sixteen per cent. of the precions metals wns lost dnring the treatment; that tbe mineral wns desulphurized to the extent of fifty-five per cent.; that fifty-two per cent. ($205.12 per ton) of the precious metals was extracted hy amalgamation, and that thirty-two per cent. wns left in the tailings. How can steam, superheated or not, he nnde to permeate a solid mass of ore, be the construction of the furnace what it may?

I will mention, in conclusion, some of the merits of a new desulphurizing furnace invented hy Mr. White, of New York, and described in your valuable journal of date Nov. 11th. The object sought to bc nttained by it is likewise oxidation of the sulphnrets, nnd isolation of the precions metals. It would be liable to the loss of gold, already mentioned, if it were not for the coil of pipe in the chimney, from which jets of cold water are ejected; and I have no besitation in asserting that hy means of the condensing effect of this arrangement nny fine particles of gold, mechanically carried off, would be precipitated into the trough below and recovered, nlong with the oxidized minernl. Its chief merit consists, in my opinion, in the mode of feeding the stamped ore, in small qnnntities at n time, and continuously, whereby every particle must come in intimate contact with the heated oxygen of the atmosphere, over and over again, during its passnge through the furnace, thus securing a complete oxidizement and consequent isolation of the precious metals.

Wishing prosperity to a successful reduction of the precious metals from the sulphurets of iron, I commend Mr. White's furnace to the attention of the miners of Californin ne heing the best invention for the purpose I have yet seen or heard of.

NARROW ESCAPE.—Some time last week a cave occurred in a drift in the Chollar-Potosi mine, shutting in back of it twn men who were working in it. This state of affairs was not discovered till the roll of the men was called for a change of shift of the morning watch, when it was found that there were two miners missing. Instant search was instituted for them, when it was discovered that their drift near where they hnd been at work had caved in for quite a distance. Men were set to work immedintely to relieve them, and a party dispatched for Dr. Broneon to be on hand to administer to these buried men, if nny medical aid was needed; hut after a short time working the men were rescned alive and without injury. It was a happy termination of an affair that looked so serious at first.—*Gold Hill News.*

COAL has been discovered in the Reese River country. It is described as being older than bituminous coal or lignite, and is undoubtedly anthracite coal highly silicified. The vein is about five feet thick. It is highly carbonized, yields a good degree of heat, and wholly burns to white ash.

MORE MALICIOUS MISCHIEF.—Some villains cut down and destroyed about 500 feet of the miners' ditch flume, near Snow Point, on Monday night last. It is supposed to have been done by the same parties who attempted, some weeks since, to destroy the Magenta flume.

Useful Information.

The Philosophy of Sleep.

NUMBER FOUR.

HOW TO PROTECT ONE'S SELF IN DEEP SNOW.

The following remarks by Dr. Maenish, in relation to this subject, are extremely interesting. The practical rule is excellent, and the fact explains how animals may hybernate in snow.

"If a person is unfortunate enough to be overtaken in a snow-storm, and has no immediate prospect of extrication, he should, if the cold is very great, and the snow deep, sink his body as much as possible in the latter, leaving only room for respiration. By this plan, the heat of the body is much better preserved than when exposed to the influence of the atmosphere, and life has a greater chance of being saved; for the temperature of the snow is not lower than that of the surrounding air, while its power of absorbing caloric is much less. It is on this principle that sheep live for such a length of time enveloped in snow-wreaths, while, had they been openly exposed, for a much less period, to a similar degree of cold, death would inevitably have ensued."

A CURIOUS EXPERIMENT.

Dr. Darwin mentions that a person placed upon a mill-stone, revolving rapidly, is thrown into sleep. I cannot find the facts upon which this statement is grounded. But I conclude that pressure upon the brain, and stupor, would be the natural physical and physiological consequences of such an experiment. Dr. Maenish observes, "By lying flat upon a millstone while performing its revolutions, sleep is soon produced, and death without pain would be the result, if the experiment would be greatly protracted." Sir John Sinclair says, "The celebrated engineer, Brindley, often saw the experiment tried, of a man extending himself across the large stone of a corn-mill, and gradually falling asleep by the stone whirling round, before the stone had gained its full velocity.

AN AFTER DINNER NAP SHOULD BE AVOIDED.

A hearty meal produces somnolency. The effect probably ensues from the temporary exhaustion of the brain, caused by the determination of the blood and nervous energy to the stomach. The sleep which follows is heavy and disturbed. It should not be indulged in. It carries no refreshment with it. The laboring digestion requires the stimulus of waking to help it. A hearty meal should therefore never be taken late at night;—*then*, in addition to the reasons against it, which have been stated, the system is already exhausted by the day it has toiled through.

FOOD A SUBSTITUTE FOR SLEEP.

A good meal at night, may be taken with another view. Suppose you have to watch, and not to sleep; it is sure that food is, to a certain extent, a substitute for sleep, and in that case, may be used as such. This means, however, can be resorted to by those only whose digestion is strong.

It has been remarked that those who eat heartily, and have strong digestive powers, usually sleep much. Those who do so, try their constitutions severely, and fall into dangerous plethora. The habit becomes gross and overloaded, and exposed to a troop of illnesses. One mode of relief is occasionally present in such cases in the shape of profuse perspiration. But this, as it is highly relaxing, lowers the tone of the system and weakens the person who so indulges in body and in mind.

PREPARATION FOR SLEEP.

A sleeping-apartment should be well ventilated; it is therefore desirable in winter to have a fire in a bed-room, or in a dressing-room opening into it. The bed had better stand detached from the wall for the same purpose. The curtains should not be drawn close; the quantity of covering should be regulated by the temperature of the weather. Dr. Rush observes, "Warm bed-clothes are especially proper to preserve or increase the heat of old people. From the neglect of this observance, they are often found dead in their beds in the morning, after a cold night, in all cold countries. The late Dr. Chovet, of New York, who lived to be eighty-five, slept in a baize night-gown, under eight blankets and a coverlit, in a stove-room, many years before he died."

It is best to sleep in a linen or cotton night-dress, which should be loose at the wrist and neck. Half the physical refreshment of sleep depends upon the laying aside the weight and constriction of ordinary dress.

It is best to sleep on a mattress,—but in this, as in everything else, change is preferable; in winter a feather-bed not too soft, in summer a hair mattress, may be used.

The shutters should be closed, in winter for warmth, in summer to save the eyes from the morning light.

During sleep, the pupil of the eye is instinctively diminished to a most minute aperture. This fact, which I do not think had been before observed, I learnt when living as house-surgeon in the Middlesex Hospital, in 1818.

The means that we use to induce sleep are founded upon principles which have been already explained.

We close the avenues of sensation, as far as we are able; we dispose our bodies in a posture of complete relaxation, and ease, and passive support, and endeavor to divert our minds from all subjects that excite activity of thought or disturbance of feeling. We strive to forget ourselves, by detaching our minds from thought, and endeavoring to be lost in the sensation of physical rest.

When sleep shuns us, and the mind falls into exciting trains of thought, the best plan is to rise, and read for a short time some work of a light and amusing character, that has no connected argument or story to engage the mind.

POSTURE, IN SLEEP.

The following rules relate to the posture to be maintained in sleep. They are from the Chinese. In substance they are excellent.

"As soon as you are in bed, you should lull the heart to sleep; I mean, you should compose it, and cast aside every thought which may banish sleep. Lie upon either side, bend your knees a little, and sleep in that posture; which will prevent the dissipation of the vital and animal spirits, and keep the heart in good case. Every time you awake, stretch yourself in bed. This will render the course of the spirits, and the circulation of the blood, more free. 'Sleep not in the posture of a dead man,' says Confucius; that is, lie not on your back. Let not your hands rest upon your breast or heart, and then you will have no frightful dreams, or fancy that some *yen*, or evil spirit, oppresses you, and holds you, as it were, benumbed, so that you cannot help yourself by shaking or changing posture."

DISTURBANCES IN SLEEP.

When our sleep is disturbed, either from indigestion, or uneasy thoughts, or uneasy bodily posture, a variety of sensations occur, to which we experience nothing parallel when awake.

The most agreeable of these sensations is that of flying; it is unattended with any idea of exertion, but consists in a sense of easy motion, in which we seem to glide, supported upon the air.

Another sensation which is much more common, is that of tumbling over and over; it has some analogy to the preceding; there is the same idea of want of support present, but instead of floating in the empyrean, we appear to fall headlong perpendicular, and awake startled.

Nightmare is a sense of oppression on the chest, felt during sleep, arising either from indigestion or from the posture in which we lie. It is always attended with a vague sense of terror, and of inability of exertion. Any kind of frightful dream may go with it. The extremity of suffering wakes us; and there is generally a brief but appreciable interval, between the imperfect recovery of our recollection of where we are, and the cessation of the seeming powerlessness. Immediately after being awake, we exert volition, move, and the uneasiness is at an end.

A frightful dream alone, is not nightmare. It becomes so when joined with an ideal effort at exertion, and a persuasion that it is impossible to make it.

[To be Continued.]

INDIA RUBBER.—A paragraph in the *North American Review* says there are now in America and Europe more than 150 manufactories of india rubber articles, employing from 300 to 500 operatives each, and consuming more than 10,000,000 pounds of gum per annum. The business, too, is considered to be still in its infancy. Certainly it is increasing. Nevertheless there is no possibility of the demand exceeding the supply. The belt of land around the globe, 500 miles north and 500 miles south of the equator, abound in trees producing the gum and they can be tapped, it is said for twenty successive seasons; 43,000 of these trees were counted in a tract of country thirty miles long and eight wide. Each tree yields an average of three tablespoonfuls of sap daily, but the trees are so close together that one man can gather the sap of eighty in a day.

A YELLOW PERPETUAL ROSE, it is said, has been produced by the celebrated culturist of roses, M. Lacharme, of Lyons. The color is represented as bright yellow, changing to pale buff, the form good, and petals of good substance.

Ameri an Wonders.

The greatest cataract in the world is the Falls of Niagara, where the water from the great upper lakes forms a river of three quarters of a mile wide, and then being suddenly contracted, plunges over the rocks in two columns to the depth of 170 feet each.

The greatest cave in the world is the Mammoth Cave of Kentucky, where one can make a voyage on waters of a subterranean river, and catch fish without eyes.

The greatest river in the world is the Mississippi. 4,100 miles in length.

The largest valley in the world is the Valley of the Mississippi. It contains 500,000 square miles, and is one of the most fertile and profitable regions on the inhabited globe.

The largest lake in the world is Lake Superior, which is truly an inland sea, it being 430 miles in length, and 1,000 feet deep.

The greatest natural bridge in the world is the Natural Bridge over Cedar Creek in Virginia. It extends across a chasm 80 feet in width and 250 feet in depth, at the bottom of which the creek flows.

The greatest mass of solid iron in the world is the Iron Mountain of Missouri. It is 250 feet high, and two miles in circuit.

The largest number of whale ships in the world were formerly sent out by Nantucket and New Bedford.

The largest single volume ever published is Webster's Unabridged Dictionary, an American work—the best in the language—containing as much matter as six family bibles.

The largest aqueduct in the world is the Croton Aqueduct in New York. Its length is forty and one half miles, and it cost twelve and a half million dollars.

The largest deposits of anthracite coal in the world are in Pennsylvania—the mines of which supply the market with twenty millions of tons annually, and appear to be inexhaustible.

The largest grain market in the world is Chicago.

The most gigantic tunnel in the world—in comparison with which the London *Times* calls the Thames tunnel the "shadow of a shadow"—is now being carried for two miles under the bed of Lake Michigan, for the benefit, and at the expense of the city of Chicago.

The most remarkable reversal of nature's works ever known is now going forward in the case of the river Chicago. Instead of flowing *into* Lake Michigan as nature made it, in a couple of years it will be made to draw water *from* the Lake and carry it into the Illinois and Mississippi rivers, thence into the Gulf of Mexico.

A REMEDY FOR CRACKED HOOFS.—A practical farmer at Pleasant Valley, Ohio, has discovered a remedy for cracked hoofs: Take a piece of copper four inches long and two inches wide, and bore eight holes in it, four at each end, so as not to interfere with the crack; then take a hot iron with a sharp edge, and burn the crack at the edge of the hair till it goes through to the quick. After this, let the horse run on pasture, and it will begin to heal up in a few weeks. This remedy I have tried, and it did the work complete, and I worked the horse all the time. Care should be taken to close the crack tight before the plate is fastened on.

FOOL-HARDY AND STARTLING.—The citizens of San Francisco, for the last few weeks, have been witnessing the foolish performances of several members of the "Buisley Family," suspended by ropes from a balloon in mid-air. These blood-curdling and fool-hardy exploits are productive of no possible good, and as an amusement, apart from the day on which they take place, are demoralizing in their influence, and have a tendency to weaken and break down the fine sense of susceptibility which should be the pride of every civilized community. The same class of performances are gone through with by others, and may be repeated by any skillful gymnast, who possesses a sufficient recklessness of danger to do so. They are accomplished, even more startling in character, by one Henry Leslie, in connection with the balloon ascensions of Prof. Lowe, from the New York Central Park. A late exploit is described as follows:

When the balloon was over a thousand feet high, two ropes were dropped out and Leslie threw himself from the car, catching one of the ropes in his fall. His first feat was hanging by one hand, when he changed his position, and hung by his feet for some time. Scrambling up the rope, he next placed the loop under the back of his neck, and there, swaying backward and forward, he remained for some time. His next feat was suspending himself by the chin, and at this time he could not have been less than half a mile high. In this position he dangled in the air, till finally, when in the neighborhood of High Bridge, he struck an attitude, placing his head in one loop, and his feet in the other, and in this horizontal position, allowed himself to be toyed with by the winds. At this point Lowe insisted on his returning to the car, and he did so.

Route and Construction of the Pacific Railroad.

The following extract from a most interesting letter from Samuel Bowles, Esq., editor of the Springfield (Mass.) *Republican*, and member of Colfax's overland party, contains some valuable information in regard to the Pacific Railroad:

As to difficulties of construction, heavy grades and high mountains, and the winter snows as obstacles to continuous use, the first third of the line, from the Missouri river to the Rocky Mountains, is merely baby-work. Three hundred men will grade it as fast as iron can be laid. It is a level, natural roadway, with very little bridging, and no want of water. It is a shame that all this section is not finished and running already. The first of January, 1867, ought now to be the limit for its completion. From here to Salt Lake, over the Rocky Mountains, there are apparently no greater obstacle to be overcome than your Western road from Springfield to Albany, and the Erie and the Pennsylvania Central have triumphantly and profitably surmounted. There are various contesting routes, northerly by the North Platte and the South Pass; by the South Platte and Bridger's Pass, which is the route we traveled in the stage; or more direct still, from Denver through the present gold mining region of Colorado by Clear Creek and over the Berthoud Pass; or again by a kindred route to the last, up Boulder Creek and over Boulder Pass, both these two entering the "Middle Park" of the mountains, and through that to the head waters of the Salt Lake basin. Our stage teams trotted up the hardly perceptible grades of the Bridger route without any effort. Coming down into Salt Lake Valley there would be rougher work; but there are several considerable streams along whose banks the track could be brought, I am sure, with no greater labor or expense than has been incurred in a dozen cases by our English railroads.

From Salt Lake to the Sierra Nevadas are two routes: southerly through the corner of Nevada, and striking Austin and Virginia City, the centers of the silver mining region—which is the present stage and telegraphic route—and northerly by the Humboldt river. The former would pass more directly through the chief present and prospective populations; but it would encounter a dozen or fifteen ranges of hills, to be crossed, and find little wood and scant water. The Humboldt route would be more cheaply built, and goes through a naturally better country as to wood, water and fertility of soil. It is generally conceded to be the true natural highway across the continent. The immigration has always taken it. If the railroad is built through it, Virginia City and Austin will be reached by branches dropping down them through their neighboring valleys.

Now we reach the California border, and the toughest part of the work of the railroad—the high-reaching, far-spreading, rock-fastened and snow-covered Sierra Nevadas. But the difficulties here are mitigated by plenty of water and timber, and by the near presence of an energetic population, and are already being practically overcome by the energy and perseverance of the California Pacific Railroad organization. I only wish the East would get to Salt Lake with their rail so soon as the West can and will with theirs. Let me state the condition of the work on each end of the line.

Congress has given princely bountiee to the enterprise, all that could be expected, everything that was asked. Government bonds are loaned to it to the amount of $16,000 a mile through the plains and $48,000 a mile in the mountains; besides which, half of all the land each side of the road for twenty miles deep is donated outright to the companies doing the work. The Union Pacific Railroad Company is reorganized at the East, and the Central Pacific Railroad Company here, as entitled to this bounty and respectively authorized to construct the road from their starting points until they meet. The companies are further authorized to issue their own bonds to an equal amount to those granted by the Government, and secure them by a first mortgage; the Government loan taking the second place in security.

THE Grass Valley *National* says: "A very singular kind of rock is found in a quarry near Dutch Flat, and is coming into use as building material, several houses having been constructed of it at Dutch Flat. It lies in masses, and is easily cut into blocks of any size by an axe, yet is sufficiently compact to serve every purpose to which brick or stone may be applied. It is both fire-proof and water-proof. Rock of a corresponding value, if not of similar quality, is found in the hills between Napa and Clear Lake Valleys.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, December 9th, 1865.

With this nnmher ths Stock Circular enters npon the third year of its existence. Dnring the past two years we have endeavored to present a faithfnl record of ths market, nnd aimed to impartially set jorth, from time to time, so far as it were possihle, the actnal condition of all claims commonly dealt in nt thc Board, and the same policy will be adhered to in the future.

Ths money market has presented no material changs since onr last reference. There is, if anything, a slight ahatement in the demand. The general inactivity of trade occasions a moderate reqnirement for business purposes, and there is no longer mnch excitement npon the Stock Exchange. Most merchants have done a profitahle hnsiness this year, and ars now in a comfortahle condition. Bank accommodations rnls for the most part at 1¼@1½ ₱ cent. per month, and out-door transactions are mads at 1½@2½ ₱ cent.

Receipts of treasurs from domestic sonrces, since the 30th ult., havs amounted to $1,550,000, including nearly one million dollars from the North coast. The Branch Mint in this city, during the same period, has taken some $450,000 for coinage. For the accommodation of the pnhlic, the Annnal closing of that estahlishment is postponed until Wednesday, Dscemher 20th, to which day inclusive deposits of hoth Crnde and Refined Bnlliou for coinage will he received.

Yesterday a good demand prevailed for Bullion, with a light supply on the market. Gold hars were held at 860 and 865, at which rates considerable transactions were made, and silver sold at ahout ½ ₱ cent. preminm for hars of average fineness. Currency Bills on ths Atlantic for this steamer were offered at 42@44 ₱ cent. premium on gold, and Telegraphic Transfers ruled as formerly, 3 ₱ cent. prsmium. Sight Drafts payahls in coin may he quoted at 1¾@2 ₱ cent. preminm, and Sterling Exchange at 48¼@48½d. for Bankers Bills; Commercial do. at 49½d.

Legal Tender Notes have heen rather mors nctivs this week, and largs sales were made within a range of 65c., seller 30, and 66½c. cash.

We are reqnested to givs notics to the Stockholders of the Chollar Silvsr Mining Company, and the Potosi Gold and Silver Mining Company, that nnless they shall, on or hefors ths 15th day of Decemher inst., present their certificates of stock and receive instead thereof certificates of ths Chollar-Potosi Mining Company, they will lose the benefit of the stipnlations for compromise, entered into hetween the two first-named companies. After ths 15th day of Decemher inst., no more stock of the Chollar-Potosi Mining Company will he issued to individuals holding certificates either of the Chollar Silver Mining Company or the Potosi Gold and Silver Mining Company.

The mining share market is still very much depressed, and a further decline has heen estahlished in a nnmher of stocks. With trifling exceptions, not much sustaining power is visihls, and yet recent developments in certain portions of the Comstock lode are thought to be more promising than for months past. Confidsnc in the futurs productiveness of all claims seems to he so severely shaken, that little or no attention is now pnid to their real value, and until a hetter feeling is inaugurated among dealers, no permanent improvement is likely to take plncs.

Gould & Curry has heen wsll maintained, nnd 10 feet wers sold within a range of $950@$975, closing yesterday nt $1,000 asked. Thers is no new features in this claim. The annual meeting of the stockholders, for the election of Trustees and transaction of other business, will he held at the offics of the company on ths 18th instant.

Savage has heen actively dealt in at cnhanced rates, nnd 125 feet changed hands; advancing from $640 to $740, receding to $720, rising to $800, huyer 30, dropping to $775, and selling yesterday nt $795@$760. In the lower level the hody of ore recently developed is said to he 70 feet in width and over 150 feet in length. An average of nearly 200 tons of ore is now daily hoisted to the surfacs from different portions of the mine.

Alpha is in less favor. Small sales were made within a range of $630@$675, closing at $615 hid. The McCurdy snit against this company, involving ahout 20 feet of ground, resulted in favor of the plaintiff. The 650-feet cross-cnt east of the engine shaft, has now explored ths lode from east to west, a distance of 200 feet, and it is found to contain a stratum of ore, some 40 feet wide, lying agninst the east or hanging wall.

Yellow Jacket has been active, and 130 feet were sold, advancing from $510 to $535, steadily receding to 477½, and selling yesterday at $455@$350. During the week snding Novemher 20th, 931 tons of ore wers extracted from the mine, and 844 tons wers worked—577 tons at Morgan mill, and halance at custom mills—yielding $24,579.25, or an average of $29.12. For the week ending Novemher 27th, 987 tons were extracted, and 1,266 tons worked—900 tons at ths Morgan mill, and halance at outside mills—yielding $36,280.68, or an averags of $28.64.

Crown Point has finctuated materially, and some 25 feet wers sold within a rangs of $700@$520, closing at $540@$520. Dnring ths week ending Decemher 2d, 362 tons of ore were raised from ths 230-feet level, and 10 tons from the 300 feet or lower level. From the 230-feot level the north incline is down 68 feet, the south 78 feet, nnd the west 55 feet, all of which are said to look well. Dnring ths month of Novemher 840 tons of ore were worked hy the Rhode Island mill, and 220 tons wers crushed hy the Crown Point mill. Belcher fell from $300 to $280, rallisd to $295, and closed nt $275.

Ophir fell to $350, rallied to $365, receded to $342½, ross to $350, and closed at nhout $340. A hody of ore has heen met with above ths 4th gallery, 90 feet from the surfacs, in ths south mine, some 60 feet in length and 3 feet wide. This is considered a valuahle discovery, as it may lead to vcry extensive hodies of ore, which, if they exist, ars yet unexplored in the upper levels.

Chollar-Potosi has heen exceedingly nctive, and 425 feet were sold, advancing from $226 to $245, declining to $195, rallying to $210, then dropping to $185, and selling yesterday at $162@$165. During the week ending Decemher 1st, 249 tons of ors wors sent to cnstom mills, 56½ tons first-class were sacked, 29½ tons were sold at $10 per ton, 56 at $6 and 393 at $5 per ton. The Grass Roots station is prodncing the nsual quantity of ore. Both ths lower and upper stopes of the Bajazette ground are said to look well, showing from four to fivo months' supply of ore in sight. Between ths 3d and 4th stations of the old works in ths Chollar, a senm of good ore has heen met with on ths east side.

Empirs Mill Mining company rose from $175 to $195, dropped to $180, rallied to $190, and sold yesterday at $185. The company's two mills are now reducing daily soms 56 tons of ore and tailings, the former heing mainly taken from the new deposit found in the upper part of the mine. Hals & Norcross has heen dealt in within a range of $190@$163, closing nt $165.

Imperial fell from $125 to 97½, seller 30, then sold at $104@103, and was dealt in yesterday at $106@$107. Receipts of Bullion last month amounted to some $75,000, hut were not deemed sufficient to warrant the payment of a dividend.

Bullion fell to $27, rose to $30, declined to $22, rallied to $27, nnd sold yesterday at $24@21. Overman declined from $46 to $29½, rallied to $32, then sold at $28½ and closed at $30. Confidence has heen dealt in within a range of $50@$47½, closing at $50.

Ths aggregate sales of Stocks, since Saturday last inclusive, amounted to $633,093.

*Those marked with an asterisk (*) are advertised in this journal.

POSTPONEMENTS.—We would again call the attention of Secretaries to a certain point of the mining law, too commooly overlooked, viz: The requirement that all postponements must be added previous to the expiration of the regular publication of assessmeot or sale notices.

BACK VOLUMES.

Back files of the MINING AND SCIENTIFIC PRESS, on nary 1st, 1864, to the present time, will be furnish per volume of six months; hound in cloth, $5

ASSESSMENT AND SALE LIST

Patent Agency and Job Printing Office, 505 Clay street, San Francisco. July 1 1865

Just and True Economy

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEES and SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by ONE HALF than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerns ing the mines and mining matters.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harper's Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it

Mining Summary.

CALIFORNIA.

YREKA.—Some of the richest claims in the county, situate on the lower part of Indian Creek, have been allowed to retain their wealth on account of the impracticability of working them, there being no way to drain them. This, says the Yreka *Journal*, is about to be remedied. Mr. S. S. Richardson is about to organize a company for the purpose of running a bed-rock drain from a point near the river up the creek, so that every claim will he thoroughly drained. The tunnel will be nearly two miles in length, and will cost a large amount, but its benefits will be incalculable.

PLACER.—The Placer (Auburn) *Herald* learns that several new locations, recently made, are regarded with much favor by those making them. The silver leads below Ophir have particularly engaged attention of late, and something like a mining fever is raging in the neighborhood. The Pacific Company is said to be taking out some splendid rock, very rich in silver.

The Boulder ledge, near Ophir, owned by Daniel Choate, and which was worked about nine years ago, was sold this week to San Francisco parties, for $6,000. This claim formerly produced good rock, but the imperfection of mining machinery, and the great expense attending quartz mining at that time, prevented its successful development. The new purchasers intend giving it a thorough prospecting, and are confident it will prove a valuable mine.

Great numbers of expert miners are visiting the regions about Auburn, Ophir, and Lone Star districts, of late, and so far, says the *Herald*, all seem to be favorably impressed, and generally express surprise that a region so prolific in quartz veins, and bearing so many favorable indications, should have lain so long comparatively neglected; and that, too, when it is the most accessible of any quartz region in the State.

CALAVERAS.—The County Assessor's report for this county sets down the number of quartz mills at thirty-nine, and the ditches at fifty-eight, the latter valued at $122,000.

The Keystone mine, at Copperopolis, under the efficient superintendence of Mr. Sheldon, has been at least partially redeemed from the condition in which it is said he found it, two years ago. Powerful hoisting works have recently been erected over the shaft near the Union line, and a number of miners below are engaged in stoping down the ore. It is the intention of the company to keep a sufficient force at work to extract five hundred tons of ore per month during the winter season, after which it is believed the mine will be sufficiently opened to yield a much larger amount.

TUOLUMNE.—Recent mining sales are reported in this county as follows: Blue Gulch mine, near Jacksonville, sold by Mathews & Allen, in Philadelphia, for $300,000; Rawhide mine, by Willis, Hodge & Fry, $75,000; Ripperdan mine, $11,000; one-half Shanghae, $27,000; Comstock mine, $125,000; Consuelo, by Gardiner, $300,000; Bonita, $280,000. The greater portion of this money will be expended in building mills, opening the mines, etc. These sales have taken place during the past summer. The *Courier* says if a stranger desires to know what is being done in the way of improvements he has but to visit the North Fork, near Summerville. Two large twenty-stamp mills are being constructed on the most improved plan. No expense is spared to make them the best mills in the county, and equal to any on the Pacific coast.

AMADOR.—We have quite a list of items from Amador, this week, which we condense as follows from the *Dispatch* and *Ledger:*

The work of putting in twenty additional stamps in the Oneida mill, at Jackson, is nearly completed—making it a forty stamper. The ore from the middle shaft looks well, and is reported to be paying well. A very large number of hands are employed at these works.

The Keystone, at Amador, is said to be paying better than ever. The Mahoney mine, at Sutter Creek, is now fully prospected to the depth of 60 feet. The rock at that depth is equal to the best, and since the recent rains their mill is grinding out bullion at a rate entirely satisfactory.

The Railroad is proving itself one of the finest mines in the county. The present run of about 200 tons will reach $20 per ton.

The Coney lead mill, at Amador, is now crushing, on an average, fifteen tons of rock daily, which pays from $12 to $15 per ton. The Blue Jacket, the first extension of the Coney, is owned by Dunning, Little and Burwell, and bids fair to soon become one of the valuable mines of Amador. Sixty-four tons of surface rock, crushed last week at the Kearsing mill, yielded over five dollars per ton. The boys say they can make five hundred dollars per month at that rate per ton, and they can. [They must be able to take out and crush their ore very cheap to do it.]

A Deep Shaft.—The proprietors of the Eureka mine, Messrs. Hayward & Chamberlain, will soon begin the work of sinking the south shaft, now about 960 feet deep, to a depth of 1,500 feet. This is a very important enterprise; and reflects much credit on the energy of the proprietors. We trust the enterprise will prove a profitable one. At Sutter Creek a large number of mines have been tested at depths from 200 to nearly 1,000 feet, and in no instance has any evidence been afforded to the contrary.

A correspondent of the *Dispatch*, writing from Volcano, says the Tellurium Company [mill, we suppose] has suspended operations for a short time; the Mountain Mill has also stopped work. The work in the mines is still progressing. We learn from another source that the Tellurium Company have struck it richer than ever in their lower tunnel.

LOS ANGELES.—We learn from the *News* that some rich diggings have reeently been taken up in the vicinity of San Fernando, and which have been thoroughly prospected, and found to yield well; paying placers exist in the gulches and at the foot of almost all the cañons of the coast range of mountains; many of them having been worked to profit in former years. A scarcity of water has delayed a rich product in gold from these placers, which obstacle may readily he overcome by a little enterprise in conducting water a short distance to the placers. At one of the points, in the vicinity above mentioned, where placer claims have been located, one nugget worth $250 was obtained, with numbers of a smaller denomination.

VIRGINIA CITY AND VICINITY.

During the month of November, Wells, Fargo & Co., according to the Gold Hill *News*, shipped from their Gold Hill office alone $483,307 worth of bullion. The *News* thinks this amount will he exceeded every month for the next twelve. The last quarterly yield of the mines of that district, according to the Virginia *Enterprise*, was $2,452,482.45. The average value per ton was $30.08 *ad valorem*, number of tons extracted, 71,495¼.

Some very rich rock has recently been taken from the Mexican mine, which shows considerable free gold. Seventeen tons of this class of rock has been worked at the company's mill, which has averaged $800 per ton. The company expects to keep its own mill working on the same class of rock all winter.

The Nye County *News* speaks of several piles of the finest ore, at the Pioneer mill, that can be found in the State of Nevada. The ore is from the Pleiades, Mountain Brow, Hobart, and Stonewall claims, in the Union district, and the Josephine claim, Mammoth district. The *News* hopes to obtain the figures for this week, when it is completed.

The same paper says that George W. Veatch, Superintendent of the Atlantic and Pacific Company, shipped a ton of ore, a few days since, to Goss & Lamhard, at Sacramento, from whence it will he shipped to New York. This ore was taken from the Silver Age, one of the claims belonging to that company, and located near the town of Union. A sample, assayed by Thomas Cahill, yielded at the rate of $4,711.35 to the ton. It will he reduced in New York, and the result will no doubt convince the capitalists at the East that Union district is justly entitled to the good reputation it has attained, both at home and abroad.

The Hale & Norcross Company have recently commenced hoisting ore from the upper level of the mine, 177 feet from the surface. This ore pays about $35 to the ton, and a body of it exists there forty-five feet long by eight or ten in width. One hundred tons of the ore is broken up and being hoisted, and the company hope to pay all expenses of running the mine as they go along. This is a continuation of the same body of ore which was worked in the upper level of the Potosi. We are not informed why this one has been allowed to lay so long in sight and unworked—perhaps, however, it was not known to be valuable.

ESMERALDA.

The new mining districts recently established around, and mostly to the northward and eastward of Esmeralda are rapidly attracting the attention of prospectors and capitalists. An entirely new and interesting district has just been organized about 100 miles east of Mono Lake, and in a region never heretofore explored. A more full account of this discovery will be found elsewhere in the present issue.

The Esmeralda *Union* notices some very rich discoveries of copper recently made near Mono Lake. The ledge crops out on a barren mountain about 1,500 feet above the valley and some four or five miles northwest of the lake. On the surface the ore assayed 20 per cent. and now at the depth of fifteen feet, where the vein is four feet wide, it assays, according to the *Union*, from 60 to 80 per cent., a great deal of it being almost pure copper.

HUMBOLDT.

The report of the Assessor of Humboldt county gives a very full description of the mines of this county. The document is very interesting. We copy the following, in place of our usual summary:

Gold.—Several gold ledges have been found in this county. But little work has been done on them. They are generally in a country rock called by some geologists quartzite, and by others metamorphic graywacke.

One of these ledges, in the Monroe claim, has been worked to a small extent. It cost $20 per ton to take the ore out and $20 more to crush and amalgamato it; but as it was necessary to haul it 30 miles to a mill, twelve tons only have been worked. The amount of bullion shipped from this county during the year ending September 30th—assayed—was $50,000; amount of crude bullion, unassayed, 50,000.

Lead.—Galena, much of which is highly argentiferous, is found here in considerable quantities—always a quartz ledge.

Copper.—Carbonates, sulphurets and oxyds of copper are found in large quantities in different parts of the county. Like Galena, these ores are always in a guage of quartz, and they generally contain a large percentage of silver.

Antimony.—Sulphurets and oxyds of antimony exist here in great abundance. Some of this ore is rich in silver, and there is scarcely any of it that contains less than $15 in silver per ton.

Sulphur.—Sulphur, in a nearly pure state, is found in large quantities. In the vicinity of sulphur deposits there are numerous remains of hot springs which are now extinct.

Salt.—Inexhaustible salt springs and salt deposits are found in different parts of the county.

Lime.—Limestone is one of the principal rocks in this section of the State.

Thus far the work done on the mining claims of this county has been almost entirely by way of exploring and prospecting the mines. Owing to the want of capital, but little has been done toward the systematic opening and working them, and, on account of this, some of the most promising mines in the county are not being worked. Recently, however, a considerable amount of capital has been invested in operations here, and there is reason to believe that some of our mines will soon he properly opened, and that several mills, adapted to the successful working of their ores, will soon he erected.

REESE RIVER.

We condense the following from the *Revielle*: Work upon the Vineyard series is being vigorously pushed. The Emma Seymour, Echo, and Cast Steel ledges are particularly spoken of.

Arrangements are being made to more thoroughly prospect the new Gold Mountain District. The assays from the croppings in this district are highly encouraging.

The Silver Hill Mill is a neat 10-stamp mill lately erected under the supervision of Mr. Chandler. It has probably commenced running by this time, with five stamps and two furnaces.

An eligible and fine location has been selected by Mr. Thurston, for the erection of a mill on the Colfax Silver Mining Company's ground, in Yankee Blade Ravine. The mill, when finished, will be one of the best in the district. The ore will be crushed dry, and then conveyed mechanically direct to the roasting furnaces. The whole arrangement of handling the ores is made according to the best devised plans of the Midas, Confidence, Keystone, etc. The furnace building has been designed for eight furnaces. The motive power will be supplied with a 130 horse-power engine.

Capt. Page and party have recently returned from the Eureka district. They pronounce the district very promising and have brought in great masses of ore from the Great Republic and Burning Moscow ledges.

Capt. Shears of the Murphy mine, at Twin river has brought in to Austin samples of the ore procured from the shaft which he is now sinking on the ledge, which fully equal the best yet obtained from the mine. The gangue is pure quartz, and the only perceptible mineral is antimonial silver, with the faintest blush of ruby. It is believed that this ore will assay as high as $1,000 in silver to the ton.

IDAHO.

A correspondent of the *Statesman*, published at Boise City, Idaho Territory, writing from Ruby City, I. T., says that operations in feet have been heavier there, of late, than ever before. The consequence of this demand for "feet" in that vicinity will he that an immense amount of mining property will soon be placed in the New York and other mining markets for disposal. The same correspondent says that no company has yet purchased mines in Owyhee and heen disappointed in finding them, upon inspection, to warrant the erection of mills. That some one may be yet taken in, he does not doubt, but there is no such thing as failure yet. All the companies that have sent their agents there for the purpose of inspecting their purchases have gone right to work to improve their property.

Mr. B. T. Dalton had heen at Ruby City, for some days, and had already secured [we presume, for sale in New York—ED. PRESS] a large amount of the best claims in this county, among which are six hundred feet in a north extension of the Oro Fino, four hundred feet in the first south extension of the Morning Star, two hundred feet south extension in the Hays & Ray, two thousand feet Home Ticket, eight hundred feet in the Dashaway, one thousand in the Rising Star. The above are not one-half of the whole amount, but are only some of those best known to be wide and good ledges.

Mr. Ryan, also from the same place, has secured for disposal about ten thousand feet, principally in the Flint District. If no more than one-half of these mines shall he sold, and work commenced upon them, next season will be one of unexampled activity and prosperity.

The Cosmos is the name of a new mill just commenced a short distance above Silver, by a New York company, William Musgrave, superinteudent. The company owns the first south extension of the Silver Legion, and the second south extension of the Morning Star, both known to be very rich. The mill will he in operation some time in January.

According to the *Avalanche*, published at Ruby City, one-stamp mills are becoming quite a feature in that region, as nearly every house has one, worked by man or hoy power, quicksilver flasks and short iron bars often comprise the entire machinery. Some, more pretentious, are fixing up "spring poles" to facilitate the work of reduction. A large amount of bullion is said to be taken out by these simple appliances, a fact indicative of the extraordinary mineral wealth of that region. Shoenhar's mill is in successful operation on Trask & Jennings' rock. The mill of Morse & Vess, at Silver City, are crushing rock for the Columbia ledge.

Mining Inventions.

The Idaho *World* makes the following suggestions to practical miners:

In the working of placer mines the spirit of invention lies dormant. Hydraulics, sluices, rockers, give not way to anything new or better; "stripping" the ground is not as yet aided by any machinery to lessen human toil. But the time may come when these huge hanks of dirt, which so much retard the miner by having to he moved by the single shovelful, will melt before the ingenuity of man like snow before a Chinook wind. Ways and means have ever been superinduced by necessity. Whenever laboring men will fully realize that within their own reach lies this great desideratum, that they must not depend on the professions and other vocations to invent great improvements, then we can hope for more general prosperity. Our intelligent politician does not know how long a time it requires to shovel a ton of gravel or a cord of dirt; our doctors don't pretend to explain what kind of oil is best adapted to gun-locks; nor our lawyers to know whether a sluice-head of water is twenty inches square or twenty square inches. Consequently it devolves upon the miner to give full sway to his inventive faculties if he would benefit his own class. He need not lay down the shovel to enable him to think; brain and muscle can work together; reason can control thoughts and bring them into the proper channel. It is the study of what we have read that expands the intellect. When men shall study cause and effect, instead of depending entirely upon the discoveries of the past, the pages of their hidden knowledge will be opened.

AN IMMENSE FUNGUS.—The editor of the Grass Valley *National* has been presented with an immense fungus—a mushroom—which measured twenty-one inches in circumference. The aforesaid editor assures his readers that he ate it—having been advised to do so by "a Frenchman."

Mechanical.

THE MANUFACTURE OF CAST STEEL.

THE BESSEMER PROCESS AN AMERICAN INVENTION.

The manufacture of cast steel is making rapid progress in all parts of the civilized world. Its manufacture in large masses is of quite recent date, and was first accomplished by Mr. Bessemer, under his *pneumatic* (nir) process. It is stated, on the authority of Prof. Fleury, of New York, that Mr. Kelley, of this country, has established his claim for priority of invention of the so-called Bessemer process, and that he is now prosecuting all who work in this country under the Bessemer patent. To Mr. Bessemer, however, and to his untiring perseverance, the most credit is due for the successful introduction of the pneumatic process in Europe, and had it not been for him, Mr. Kelley, or any other claimant of this important improvement, would very likely have been obliged to wait many years before it would have found a practical introduction into this country.

Steel is now manufactured in Pittsburgh, by the Bessemer process, which rivals the best European brands, and if they continue in their efforts to improve, it is not impossible that America will stand at the head of the steel trade. Messrs. Winslow & Holley, of Troy, N. Y., exhibited at the late American Institute Fair, in New York, specimens of cast steel made by this process, in ingots weighing two tons each; and they are now fitting up machinery for making *fifteen ton* ingots. A cast-steel axle of their make was submitted to the trial of being bent double, the inner sides meeting within an inch, without exhibiting a crack. Several square bars were bent double, others were twisted; all these bends and twists were made when the samples were cold. Several pieces of rail were twisted one turn in two feet. All the samples appear to bear as much bending and twisting as the best iron. There are samples of boiler plates worked into the most difficult forms with entire solidity. Their work was successfully submitted to many other trials of a similar character.

Notwithstanding the efforts and genius of Mr. Bessemer in England, Germany is now ahead of England in the production of cast steel. The Saxton cast steel manufactory at Doehlen, is now doing an extensive and profitable business, and a new manufactory, on an extensive scale, is being put up at Hagen, in Westphalia.

But the great, gigantic cast steel manufactory of the world is that of Mr. Krupp, at Essen. The *modus operandi* employed at this establishment, until recently, has been quite a mystery. The veil has now, however, been somewhat drawn aside, and the process employed disclosed, by a lecture given by Mr. Bug, at the last meeting of the Lower Austrian Trade Association. The establishment, with the buildings now in the course of erection, occupies an area of about seven hundred acres; there are altogether eight thousand hands employed on the premises, whose aggregate fortnightly wages amount to £12,000 sterling. Seventy-five steam engines, of from 3,000 to 4,000 horse power in the aggregate, and varying in capacity from one to 1,000 horse power, supply the motive power, while one hundred and fifty boilers consume six hundred tons of coal in twenty-four hours, and evaporate 170,000 cubic feet of water. The forging is done by means of thirty-five steam hammers, varying from one to fifty tons in weight; the last is reported to be the largest in the world; it rests upon a foundation weighing fifteen hundred tons, and cost £90,000. The steel is prepared in crucibles, for the reception of which two hundred and forty ovens have been built. The production of cast steel in 1863 amounted to 11,156 tons, and in the first six months of 1864 to 8,035 tons. Krupp's cast steel is well known in England, but his establishment is especially famous for turning out good guns.

The process adopted by Mr. Krupp for producing his mammoth ingots is said to be the employment of puddled steel, prepared in a great measure from *musen spiegeleisen*, and melted in crucibles, each containing seventy pounds or more of steel. It is stated that the contents of the crucibles are first poured into a ladle, similar in principle to that described under the Bessemer process; and that there is an arrangement by which, at a given signal, the crucibles can be raised up by the stokers in the cellar. He is also said to use the pneumatic process on a large scale. Krupp's tyres and rails have no equal, and are exported to all parts of the world.

TENACITY OF COPPER IMPROVED BY PHOSPHORUS.—A very interesting paper was read by Mr. F. A. Abel, at a late meeting of the "British Association for the Advancement of Science," wherein that gentleman gave the results of several experiments which he had made on the compounds of phosphorus and copper. The particular object of his experiments was to ascertain if phosphorised copper would be more effectual as a material for the manufacture of cannon than the copper alloy generally used for that purpose. In testing the tensile strength of phosphorised copper he ascertained that a bar of ordinary copper, one inch in sectional area, broke under a strain of 25,000 pounds; and that a similar bar of gun metal required 32,000 pounds to break it; while copper combined with five-tenths of one per cent. of phosphorus required 38,380 pounds to break it, and when combined with one and a quarter per cent. of phosphorus the bar withstood a strain of upwards of double that of pure copper! Mr. Abel further stated that notwithstanding the very superior tenacity of phosphorised copper, there were practical difficulties which would not admit of its being employed in gunnery. What that difficulty was, is not stated in the report before us. He also stated that phosphorised copper could not be employed for telegraphic purposes, for the reason that the presence of phosphorous greatly deteriorated the metal as an electrical conductor. These experiments still further illustrate the importance of still more extended and elaborate researches into the alloys of the useful metals, a matter to which we have several times alluded to in late issues of the PRESS.

THE OFFICIAL REPORT on the race between the Winoooski and Algonquin states that the economical performance of each vessel was equal, and that the arrangement of the Winooski machinery is the completest and most convenient possible, and its economy is fully equal to that of the very complex design of the Algonquin. The great inequalities in the relative power of the two engines, of their fire-grate surface, etc., renders them entirely unsuitable for any such comparative trial as they have been subjected to. Their trial has been a perfect waste of time and money, and proves nothing.

UTILIZING SLAG—A NEW PAVING MATERIAL. A new method of utilizing furnace slag has lately been introduced into some European cities, which may be described as follows: The slag is run into pits about eight or nine feet in diameter, when it is allowed to cool slowly. When quite cool it is removed and cut into blocks of a convenient form for pavements, for which it is said to answer a most excellent purpose. It has been used at Mentz and in Paris, and is said to be superior to the "grit-stones" usually employed in those cities for paving. It can be made economical only at points where good paving stones have to be brought from a distance, to supply the immediate locality of the furnace.

LIFE OF A LOCOMOTIVE.—The life of a locomotive on English roads is about twenty years. The *American Railway Times* says that the more careful and conservative of our railway managers estimate the annual depreciation of locomotives at eight per cent., and others think that estimate is quite too large. There are locomotives that have been running on American railways since 1840, and no doubt some may have been in service still longer."

SOMEWHAT late in the day, it has been determined to erect a memorial at Birmingham to James Watt, the "father and pioneer of mechanical engineering." Watt died in the year 1819.

SAN FRANCISCO MINING MACHINERY.—Mr. B. F. Dalton, a large capitalist, who has spent years in quartz mining, has recently left Ruby City, Idaho Territory, for New York, with the view of interesting Eastern capital in the mines of that section. In speaking of the relative value of New York and San Francisco mining machinery, he says: "It is the hight of folly to purchase quartz machinery in the Eastern cities; San Francisco is to be preferred every time." Speaking of the mines of the northern part of Idaho, he says they need not spend time in puffing their ledges, as they possess a merit that will tell their own story, and eventually force themselves into notice. He expects to back his opinion by the early construction of a mill which shall equal anything in that region, besides being the agent through whom many other mills will be put up in that place during the next and succeeding seasons.

THE LARGEST WIRE ROPE, probably, ever manufactured, was recently turned out from the wire factory of the Messrs. Hazard & Co., Pittsburgh, Pa. Two of nearly equal length and size were manufactured. The largest lacks but eighty feet of being a mile in length, is one and five-eighth inches thick, and weighs upwards of eleven tons. It is to be employed on the Canal Company's plain, near Wilkesbarre, Pa.

WELDING LARGE MASSES OF IRON—A NEW INVENTION.—An invention has recently been patented by Messrs. Standly & Prosser, of England, for the employment of hydrogen or its compounds, alone or mixed with oxygen or atmospheric air projected from blow-pipes, for the purpose of welding plates or masses of iron, or other metals. They prefer to mix the gases in a reservoir at the base of the blow-pipe.

EUROPEAN ENGINEERING COMPETITION.—The Baden Government recently advertised for proposals for constructing *forty-six* locomotives; the competition to be open to the world. Bids were sent in from French, German, and English manufacturers, as follows: Bids offered by the French, £1,800; by the Germans, £2,228; by the English, £2,828. A wide margin will be noticed between the bids.

STEAM POWER ON THE WESTERN PLAINS.—The recent discovery of coal among the mountains of Colorado, is destined to work a revolution in transportation across the western plains. A company has already been organized in Boston and New York, with a capital of $6,000,000 for the purpose of placing steam fraction engines on the roads between the Mississippi and the Rocky Mountains, a distance of 650 miles. An engine of thirty-two ton's weight is now in process of construction, and will be put in operation as soon as it and the necessary wagons are ready.

The route from Nebraska City to Denver has been recently surveyed, and it is reported to be well adapted to the use of fraction engines. The freight business across the plains is said to be very great—amounting, the present season, it is estimated, to 2,000,000 lbs. By the use of these engines, it is said that trains can cross the plains in six days, while mule and cattle trains occupy from forty-five to sixty days in crossing.—*Toledo Blade.*

PETROLEUM AS FUEL.—The English are persevering in their experiments to prove the practicability and economy of employing petroleum as a fuel for making steam. A late number of the London *Artizan* says that the petroleum boiler at Woolwich Dockyard, lately experimented with, is now undergoing considerable alteration, in order to assimilate it more to the simple form of the present marine boiler. The long course of experiments under Mr. Richardson's supervision, at Woolwich, has proved the present system to be not only available but utterly free from danger; the experiments are now to be carried on with great vigor. When the alterations are completed the boiler will be able to burn the Rangoon, Barbadoes, or Trinidad petroleum, together with the English coal and whale oils alternately, as well as every other kind of hydrocarbon, to obtain any degree of speed that may be required, and without waste.

WIRE BRIDGE.—Work is steadily progressing on the wire suspension bridge across the American river, immediately below the junction of the North and Middle Forks. It is contemplated to have the Bridge and road opened for the spring travel.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

OFFICE OF THE MINING AND SCIENTIFIC PRESS—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application to the Government, embracing a petition, specification, model, duplicate drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely consider his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that if another files the application described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on preseating an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we a cause thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficient, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, No 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the status of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even longer. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every application for a patent, for seventeen years...	15
On every caveat.....	10
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the veriest of a stranger which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

San Francisco:

Saturday Morning, Dec. 9, 1865.

A STATE MINING CONVENTION.

Pursuant to the request of several mining journals and representative mining individuals, the association known as the "California Mining Bureau," of this city, through their Board of Trustees, have issued the following call for a Mass Convention of the miners of California:

RESOLVED, That a Mass Convention of the miners of the State of California, be and is hereby called to assemble in the city of Sacramento, on WEDNESDAY, the 17th of January, A.D. 1866, at 12 o'clock, and that any person engaged in actual mining operations shall be eligible to a seat in said Convention.

JOSEPH W. LOW, Vice-President.
J. B. WHITCOMB, Recording Secretary.
San Francisco, December 6, 1865.

THE CONVENTION "CALLED."

In accordance with the particular request of the publishers of this paper, and at the suggestion of several of the local mining journals of the interior, as well as quite a number of representative mining individuals throughout the State, the California Mining Bureau Association of this city, at a meeting of its Directors, held on Tuesday evening last, took the responsibility of issuing a "call" for a mass convention of the miners of this State, to be held at Sacramento on the 17th of January next.

The expediency of this measure has been freely discussed and fully indorsed by nearly or quite every paper throughout the State; and now that it is fully "called," we trust that no effort will be spared on the part of the miners themselves to secure a large and full attendance. With regard to the place, we know of none which could be more central or convenient. The day fixed is quite as early as is compatible with due notice being given to all parts of the State. The fact that no person or persons were duly "authorized" to call a convention, naming, with particularity, the precise mode in which delegates shall be elected, their number, etc., has induced the association, which has been requested to take the initiatory action, to make the "call" as general as possible. Hence, a "mass convention" has been called of all persons actually engaged in mining, whether by wielding the pick and shovel, or furnishing the necessary means to enable others to do so. It is the intention of the callers that the convention shall include representatives of all classes who are directly interested in mining—the men of wealth, to whom we are to look for the treasure which must first unlock the great storehouses of nature before we can appropriate her riches, as well as the hard-handed toiler in the mine—the capitalist and the laborer—the mill-manager as well as the toiler in the mine or mill, not forgetting the hardy prospector, who risks life, health, and money to lead the way to wealth, in which others are to follow with comparative ease and safety.

We have no local interests or jealousies which are to be fostered or checked by a proportionately delegated representation of interests and numbers. Our interests are common; what is for the benefit of one section is for the benefit of all. So only that all *classes* are represented, we are right. That they *will* be, by the miners coming together *en masse*, we feel well assured. Thus constituted, the discussions and action of the convention cannot fail to accomplish much good in securing a uniformity of mining laws, a proper legislation—if any at all—at Washington, a thorough revision of our State laws, and full protection to miners from the threatened encroachments of railroad and all other incorporations or influences which shall aim to deprive the miners of their just right, and the country at large of the fullest benefit of the great public patrimony, which should be held forever in trust for the people to work under reasonable restrictions and with fixed guarantees.

It is to be hoped that our cotemporaries throughout the State will give the widest circulation to the "call," and that each mining district will take such measures as will secure, beyond peradventure, a full and prompt attendance at the time and place designated. From the fact that a *mass* convention is called, and that the doors will be open to all who may be interested, it should not be left to the mere chance collection of such as may *happen* to be in Sacramento at the time, but preliminary meetings should be called in every district, and efforts made to render a full attendance a matter of certainty.

ANOTHER COPPER STRIKE.—A correspondent from Jackson, Amador County, writes, under date of December 5th, that "the Randall Copper Mining Company, located one and one-half miles north of the Newton mine, on Friday last struck their vein by running a cross-drift from the bottom of the shaft. The lode is *eight feet* in thickness, of yellow sulphurets and black oxides, assaying from 27 to 40 per cent per ton. Immediate operations will commence to run the levels and be ready to take out ore for shipping in the spring.

"This mine has been worked for two and one-half years. Two shafts have been sunk to the respective depths of 150 and 160 feet, both of which can be used in hoisting ore by running short drifts. This is believed to be the largest vein of solid ore, assaying such a high percentage, that has been struck in this State. The mining interests of Amador County are looking up in a very satisfactory manner. This winter most of the mines are paying better than ever."

AS IT SHOULD BE.—The hotel keepers of San Francisco have in contemplation the preparation of a Bill to be presented for action by the present Legislature, to clearly and distinctly define their responsibility in cases of special deposits from their customers, to the end that there may hereafter be no misunderstanding with regard to their mutual relations under such circumstances. The late robbery of the What Cheer House has suggested this movement. A recent decision by the Supreme Court of the State of New York, in a parallel case, which may have a bearing here, was to the effect that when a guest handed the clerk a purse or package, with the simple remark that it contained "money," the hotel keeper was liable only for so much "money" as a man might ordinarily be expected to carry about him when traveling. We do not see how, when no specific receipt is given, a person is to prove the deposit of any particular sum, unless a witness stands by and sees it, just previous to the deposit. At all events it seems very proper that some special legislative action should be had in the matter, as contemplated in the movement alluded to.

BORAX.—About two hundred tons of borax have been shipped from the mine in Lake county during the past year. Fifty hands are now employed, taking out from three to five tons per day. So we learn from the Lakeport *Journal*.

QUICK WORK.—A telegraphic dispatch was received in Grass Valley, Nevada City, a few days since, in twelve days from the City of London.

CALIFORNIA LEGISLATURE.

This honorable body convened at Sacramento on Monday last. Most of the members were present and took the oath. The following is a list copied from the daily press, which is the most correct that we are enabled to obtain at this time:

SENATE.

Belden, David—*Nevada.*
Banning, P.—*Los Angeles.*
*Benton, J. E.—*Sacramento.*
Bradley, E. L.—*Placer.*
*Cunningham, Lewis—*Sutter and Yuba.*
Cutter, James H.—*San Francisco and San Mateo.*
Dodge, H. L.—*San Francisco and San Mateo.*
*Evans, O. S.—*Mono and Tuolumne.*
Ewer, Seneca—*Butte and Plumas.*
Freeman, J. W.—*Fresno and Tulare.*
*Hawes, Horace—*San Francisco and San Mateo.*
*Hartson, C.—*Napa, Lake and Mendocino.*
*Hale, James E.—*Placer.*
Heacock, E. H.—*Sacramento.*
Hardy, Thomas—*Calaveras.*
Hager, J. S.—*San Francisco and San Mateo.*
Johnson, James.—*El Dorado:*
*Jones, John P.—*Shasta and Trinity.*
*Kutz, Joseph—*Nevada.*
Knox, W. J.—*Santa Clara.*
*Leonard, W. H.—*Calaveras.*
*Lovett, William E.—*Santa Cruz.*
Murphy, P. W.—*Santa Barbara and San Luis Obispo.*
*Myers, Samuel—*San Joaquin.*
Mizner, L. B.—*Solano and Yolo.*
*Maddox. F. L.—*El Dorado.*
*Montgomery, W. S.—*Mariposa, Merced and Stanislaus.*
*Porter, Charles D.—*Contra Costa and Marin.*
Pearce, George—*Sonoma.*
Pratt, L. E.—*Sierra.*
Robinson, Henry—*Alameda County.*
*Rush, John A.—*Colusa and Tehama.*
Seaton, G. W. deceased (vacancy)—*Alpine and Amador.*
*Smith, F. M.—*Butte and Plumas.*
Shaw, Wm. J.—*San Francisco and San Mateo.*
*Tuttle, M. C.—*San Bernardino and San Diego.*
Tubbs, A. L.—*San Francisco and San Mateo.*
Tecgarden, E.—*Sutter and Yuba.*
*Wright, S. P.—*Del Norte, Humboldt and Klamath.*
Wolcott, Oliver—*Mono and Tuolumne.*
Wadsworth, E.—*Siskiyou.*

*The asterisk (*) denotes Senators holding over.

ASSEMBLY.

Anthony, William—*Santa Cruz.*
Ayres, Isaac—*Calaveras.*
Bosquit, John—*Placer.*
Bowman, James—*San Francisco.*
Bugbee, S. C.—*San Francisco.*
Brayley, M. A.—*San Francisco.*
Bledsoe, A. C.—*Sonoma.*
Brown, J. C.—*Tulare.*
Batchelder, A. J.—*Yuba.*
Brown, F. A.—*Contra Costa.*
Collier, M. M.—*Calaveras.*
Campbell, J. S.—*El Dorado.*
Clayton, Charles—*San Francisco.*
Chamberlain, C. H.—*San Joaquin.*
Chase, E. J.—*San Francisco.*
Corey, J. M.—*Santa Clara.*
Chappello, J. N.—*Shasta.*
Coghlin, John M.—*Lake and Napa.*
Dorr, J. C.—*Trinity.*
Downing, J. L.—*Sonoma.*
Dornin, George D.—*Nevada.*
Dutton, Henry—*San Francisco.*
Dwyer, David—*San Francisco.*
Eager, Thomas—*Alameda.*
Goodall, J. E.—*Mono and Tuolumne.*
Green W. E.—*San Joaquin.*
Goodwin, J. D.—*Lassen and Plumas.*
Holden, William—*Mendocino.*
Hogle, L. I.—*Mono and Tuolumne.*
Hatch, H. L.—*Nevada.*
Heustis, R. J.—*Humboldt.*
Hollister, Dwight—*Sacramento.*
Hunt, William B.—*Sacramento.*
Hansbrow, Thomas—*Sacramento.*
Hopper, P. J.—*Sacramento.*
Hawkins, Michael—*San Francisco.*
Hearst, George—*San Francisco.*
Hill, R. J.—*San Luis Obispo and Santa Barbara.*
Howard, George H.—*San Mateo.*
Hunt, A. B.—*Santa Clara.*
Hoag, O. H.—*Sonoma.*
Hamlin, Francis—*Sutter.*
Ireland, M. G.—*Monterey.*
Kurtz, D. B.—*San Diego.*
Kidder, J. F.—*El Dorado.*
Long, W. S.—*Colusa and Tehama.*
Lee Harvey—*Alpine and Amador.*
Leech, Reuben—*Nevada.*
Lupton, Samuel L.—*San Francisco.*
Lemon, James M.—*Solano.*
Luttrell, J. K.—*Siskiyou.*
Murch, L. H.—*Del Norte and Klamath.*
Maholmb, J. M.—*Sacramento.*
McClelland, J. A.—*San Francisco.*
Mace, R. P.—*Fresno.*
Meredith, G.—*Sierra.*
Miner, Frink, Jr.—*Alpine and Amador.*
Olds, D. Jr.—*Marin.*
Peterson, W. H.—*Los Angeles.*
Parrish, E. C.—*Los Angeles.*
Perris, Otis—*Mono and Tuolumne.*
Pattison, John—*Nevada.*
Reed, Charles F.—*Yolo.*
Singleton, M. A.—*Sierra.*
Steele, Thomas H.—*Siskiyou.*
Suttrell, J. K.—*Siskiyou.*
Sherwood, T. J.—*Yuba.*
Stewart, Orrin—*Yuba.*
Smith, E. L.—*El Dorado.*
Smith, George E.—*Butte.*
Sawyer, N. G.—*Calaveras.*
Sexton, William—*Placer.*
Satterwhite, J. W.—*San Bernardino.*
Tilden, W. P.—*Butte.*
Taylor, Ed. F.—*El Dorado.*
Wiggin, C. L.—*San Francisco.*
Wilson, John L.—*Alameda County.*
Wilcox, J. W.—*Mariposa.*
Ward, R. H.—*Merced and Stanislaus.*
Yule, John—*Placer.*
Zuck, John—*Santa Clara.*

On Tuesday the follow officers were elected, being the nominees of the Union caucus, which was held on Monday evening.

Senate.—Secretary, John White; Assistant Secretary, Charles W. Gordon; Enrolling Clerk, Albert Hart; Engrossing Clerk, M. E. Gelston; Minute Clerk, Martin Rowan; Journal Clerk, Wilbur F. Heustis; Copying Clerks, E. B. Edson and Bart Morgan; Segeant-at-Arms, John Moran; Assistant Sergeant-at-Arms, James Lane; Night Watchman, T. Mahoney; S. P. Wright, President *pro tem.*

Assembly.—Speaker, John Yule of Placer; Speaker *pro tem.*, J. W. Wilcox, of Mariposa; Clerk, M. D. Boruck; Assistant Clerk, John H. Roberts; Minute Clerk, J. W. Wood; Sergeant-at-Arms, Benjamin Dore; Assistant Sergeant-at-Arms, Charles Roberts; Enrolling Clerk, John E. Youngberg; Engrossing Clerk, B. S. Marston; Journal Clerk, Lieutenant John Drum; Copying Clerks, E. L. Selfridge and John C. Breen; Watchman, Isaac H. Hathaway. Dr. M. C. Briggs, of Sacramento, was elected Chaplain, and voted a salary of $5 per day.

The ballotings in the Senate stood 31 Union to 6 Democratic; in the Assembly, 59 Union to 19 Opposition.

Wednesday the Assembly passed the bill for the amendments to the Constitution of the United States, under a suspension of the rules, by the following vote:

AYES.—Anthony, Ayres, Batchelder, Bosquet, Bowman, Brayley, Brown of Contra Costa, Brown of Tulare, Bughee, Campbell, Chamberlain, Chapelle, Chase, Clayton, Coghlin, Collier, Corey, Dorr, Dornin, Dutton, Dwyer, Eager, Frink, Goodall, Green, Hamlin, Hanshrow, Hatch, Hawkins, Hill, Hogle, Hollister, Hopper, Howard, Hunt of Sacramento, Hunt of Santa Clara, Huestis, Ireland, Kidder, Kurtz, Lee, Leech, Lemon, Lupton, Luttrell, Maholm, McClelland, Meredith, Murch, Olds, Jr., Pattison, Perrin, Peterson, Reed, Sawyer, Sexton, Sherwood, Singleton, Smith of Butte, Smith of Eldorado, Steele, Stewart, Taylor, Tilden, Wiggin, Wilcox, Wilson, Yule, Zuck —66.

NAYS—Bledsoe, Downing, Goodwin, Hoag, Holden, Hearst, Long, Mace, Parrish, Satterwhite, Ward—11.

With few exceptions, the Legislature appears to be composed of men of sober earnestness and integrity.

Both branches adjourned from Wednesday to Friday, on account of our State and National Thanksgiving Day.

QUARTZ MINING IN PLACER.—We have already, from time to time, noted the renewed interest which has of late been awakened to the quartz mining interest in Placer county, and particularly in the vicinity of Auburn. We had the pleasure, a few days since, of an interview with Capt. W. Holdridge, a gentleman well known in this city as one of the chief originators and most efficient Directors of the Fireman's Fund and Home Mutual Insurance Companies, who has recently carefully examined most of the mines about Auburn. The Captain assures us that the value of those mines has not been at all over-estimated, and so well impressed is he of their richness that he left on the steamer of the 30th ult. for New York, with the view of interesting Eastern capital in their development. Previous to his leaving, some thirty gentlemen of this city, shareholders and directors in the insurance companies above named, with whom he has been long associated in business, joined in a testimonial letter expressive of their high regard of his capacity and integrity as a business man, and wishing him the fullest success in the new enterprise upon which he was embarking to enlist the assistance of Eastern capitalists in the development of our mines. We understand that two of the late heavy owners in Gould & Curry have recently made a purchase of two quartz mines near Auburn.

NOTICEABLE.—A severe earthquake occurred at Colima, Mexico, on the 8th of October (same date as the shock which disturbed San Francisco), which caused the river Colima to overflow its banks and destroy a number of small houses. Its occurrence, simultaneously with a similar disturbance here, is especially noticeable and highly suggestive.

THE TIDE TURNED.—The last month has given California a gain of some two hundred passengers by sea, and added considerably to the State's population from the interior Territories. The tide has turned.

A NEW MINING DISTRICT.

We have had placed upon our table some very fine specimens of silver ore from an entirely new mining district, lately discovered about one hundred miles easterly of Mono Lake, and at least seventy-five miles distant from any already existing district. It has been named the Pah-ranagat Lake District. the Indian name of the lake and valley near which the mines are located. The discovery was made in March last, by Messrs. J. Ely, W. McClosky, S. S. Shutt, and three others. The location, as ascertained by running out a line from a known point, is in lat. 37 deg. 34 min. north and 115 deg. 29 min. west, which places it in the southeast corner of the State of Nevada. The overland route to San Francisco will be by Mono Lake; the water route *via* the Colorado river. The distance from Crystal Springs, in the Pah-ranagat Valley, to Call's Landing, on the Colorado, is about 125 miles, following the course of the Muddy and Virgin rivers. Water and grass is abundant.

The ore from this newly discovered region is mainly silver-bearing, and judging from samples of the croppings before us, the mines must prove very rich in depth.

Assays have been made by Mr. G. Kustel from five different samples of ore, taken from as many different lodes, three of which present marked peculiarities, and duplicates of all of which are before us. We append the assays with a description of each sample:

No. 1.—Principally carbonate of lead and antimony, yielded at the rate of $867.10 in silver to the ton of ore.

No. 2.—Carbonate of lead, copper, and antimony. $282.25 in silver.

No. 3.—Carbonate of lead and copper, with argentiferous grey copper ore and copper, silver glance. $1,036.75 in silver.

No. 4.—A specimen presenting same characteristics as No. 3, yielded at the rate of $263.90 to the ton.

No. 5.—Another specimen similar to No. 3, yielded at the rate of $337.30 to the ton. The two last each presented traces of gold.

The chief point of general interest in connection with this discovery, is the fact that it opens up an entirely new mining district, from seventy-five to one hundred miles distant from any now worked. Not more than 100 pounds of ore has been brought in, all of which was taken directly from the croppings, no point having been opened more than five feet below the surface. We understand that arrangements are being made for the immediate development of this locality.

Twelve miles east of the mines lies a fine agricultural valley, containing about two hundred quarter sections of good farming land, with an abundance of water for artificial irrigation. This land has been claimed and settlers are moving in and taking possession of their ranches.

The region adjacent to Pah-ranagat has a decided mineral appearance, and it is believed that this hitherto *terra incognita* will soon prove very valuable.

A petition has been forwarded to Washington for mail facilities, and the necessary steps are being taken to insure the presence of a peaceable and prosperous community.

The Mechanics' Institute has appointed a Special Committee to draft a law to be presented to the Legislature, for the protection of mechanics against the schemes of contractors and owners of buildings to cheat them out of their wages. It is designed that the law shall be in the nature of a lien law. The annual ball of the Institute will take place at Union Hall on the night of Thursday, the 14th inst. The Directors of the Institute have been ordered to print a catalogue of the library forthwith, and a committee has been appointed to raise funds for the erection of Mezzara's statue of Lincoln in front of the Lincoln school. The Report of the Fifth Industrial Exhibition of the Institute is now being printed at the Mining and Scientific Press Job Printing office. Extracts from the reports will be published in future numbers of our paper.

Mr. Bancroft, the historian, is busily engaged at his country residence at Newport, upon the eighth volume of his great work. Mr. Bancroft is now in his 66th year, and enjoys excellent health.

The Album Stereoscope.—Many of our readers who visited the Pavilion last Summer, will recollect that neat and new optical instrument, the invention of Mr. Mills, of this city, which he has designated as "Mills' Album Stereoscope." It is only quite recently that he has been enabled to get any manufactured for general sale, and a few, only, are now offered, at the book store of H. H. Bancroft & Co., on Montgomery street. He will soon, however, be able to supply the fullest demands of the trade. This useful instrument is designed to accompany and render far more interesting and useful those elegant household treasures known as "Ladies' Photographic Albums." It consists of a plano-convex lens, a concave silver speculum, and a chromium; all arranged in a small box, turned out of solid rosewood or ivory, and so combined as to neutralize the shadows cast by the rough surface of the card and give a flesh-like softness, tone and life-appearance to the magnified picture, in place of the harsh, cadaverous and unnatural effect produced by the common magnifying lens or stereoscope. It is applicable equally to card pictures, ambrotypes and the new style of photographic miniatures on porcelain and ivory. In a *good picture* the apparent transformation from a mere picture to the living person, with his full, clear, natural expression, is wonderful, and the effect is in exact proportion to the excellence of the original.

Interesting and Important Discovery at the New Almaden Mine.—It was accidentally discovered, some time since, so we have heard, that the slag or refuse from the furnaces at the New Almaden quicksilver mines, contained a noticeable quantity of gold. Samples of this refuse have been submitted to a number of assayers, in this city, all of whom have returned gold, varying in quantity from $10 to $20 per ton. We have further understood that about a ton of this refuse has been sent hither to be tested by a working process, the result of which will soon be known. This refuse is so thoroughly calcined and desulphurized, in the process of extracting the quicksilver from it, as to be almost entirely soluble in water, becoming completely disintegrated. Hence it will require no crushing, but may be submitted directly to the simplest amalgamating process for the extraction of the gold, which is in a perfectly free state. The cost of such a process will be merely nominal. The quantity at the works can scarcely be less than 30,000 or 40,000 tons. This discovery, if it shall be verified, will be a most interesting and important one.

California Mining Laws.—A correspondent suggests that some public action should be taken, on the part of those interested in mining, to procure a modification of some of the State mining laws, which have been found inoperative or directly injurious to the mining interest. Preliminary action on the part of those directly interested is suggested as a guide for legislation. Particular attention is called to the necessity for a law which shall meet those cases where a locator or shareholder in an unincorporated company refuses to pay the necessary assessments for holding or developing the company's claim, or to sell out to any person who will; thereby compelling his partners to develop his interest with their own, they taking upon themselves all the chances of loss, while the laggard is enabled to come in for his full share of profit, should any ensue. The necessity for such a law is apparent to every one, and we presume this, with other matters, will come up for discussion and action before the miners' convention, which will meet at Sacramento on the 17th of January next.

Personal.—We had the pleasure, yesterday, of a visit from John Arthur Philips, Esq., one of the best metallurgists of the day, and one who has made the metallurgy of copper a especiality. He is well known to the world as in connection with that valuable work known as "Phillips & Darlington's Metallurgy of Copper." Mr. P. arrived on the last steamer, and leaves in a day or two for the interior, whither he goes to inform himself, by personal observation, with regard to the character and value of our mineral resources.

The New Collector.—Notwithstanding the frequent statements in the dailies of late, that the newly appointed Collector of this port, Gen. Miller, would assume the duties of his office on such and such a date, the General has persistently kept his own councils, and *outflanked* all the meddlesome reporters by closing his own time. He entered upon the duties of his office unheralded, on Tuesday morning last, taking the place of Col. James, who retires. No person ever took charge of the collection of the customs for this port, more free from the trammels of party and friends, than has Gen. Miller; and no one has ever entered upon the discharge of those duties in whose honesty and faithfulness the Government and community at large has felt at the time a more implicit confidence. The wisdom, integrity, and promptness which has heretofore guided him in his arduous and responsible duties, as a military officer, will not fail him in his new position of civil and commercial responsibility.

Natural Curiosities.—In the middle of the great Humboldt salt bed is a fine fresh water spring, about twelve feet in diameter. It has been sounded to the depth of 150 feet, without finding bottom. There are other smaller springs of fresh water, the bottoms of which have never yet been sounded by lead or plummet. Some of these springs are warm, others cold. On one side of this salt field is a volcanic mountain, now burnt out. The shape of the crater is still distinctly to be seen. One side of the mountain is split off, allowing the lava to flow out down the side of the mountain and far out into the plain, where it is yet to be seen plainly seen as when the mountain first burst asunder.

Fish Breeding, which has been so successfully practiced for years in France, is about to be introduced into this country. It has already been done to some extent by private enterprise. The Massachusetts Legislature has directed the appointment, by the Governor, of a commission to carry out the project. The appointment has been made, and the commission was recently looking around among the rivers and lakes of New Hampshire, and are soon going to take measures to introduce salmon and other fish into Massachusetts waters.

Earthquakes at the East.—Our Eastern friends are occasionally experiencing the sensation of earthquakes. We lately mentioned the occurrence of quite a severe "shock" in the Mississippi valley. On the 17th of October last, nine days after the severe one here, the citizens of Lancaster and Charter counties in Pennsylvania were treated to quite a "tremblor," which was attended with a heavy rumbling noise and a considerable shaking of the houses. A committee of the Linnean Society was appointed to collect all the facts with regard to it.

Palatial Residence.—The finest residence outside of San Francisco, and, in fact, as fine as any in San Francisco, says the Chico *Courant*, is being erected by General Bidwell, at a cost estimated all along from forty to one hundred thousand dollars.

To Correspondents.—We will endeavor to comply with the suggestion of our correspondent "X. Y. Z."

Our correspondent J. A. B., from Summit City, will find his suggestion fully covered by the "Call for a Convention," which we have placed at the head of our columns this week. The call, he will notice, is for a mass convention. The propriety of such a call is elsewhere alluded to.

Important Real Estate Sale.—Quite an important real estate sale took place at the corner of Mission, Sixth and Jessie streets, in this city, a few days since. The property extended 275 feet on Mission street and 235 on Sixth, divided by Jessie street. It was sold in thirty-three separate lots, for the aggregate sum of $79,030.

Patent Right for Sale.—The exclusive right for the manufacture and sale of "Hutchinson's Wine and Cider Mill and Press, for the States of California and Oregon, is advertised for sale in another column. It is a valuable patent, and the offer affords a fine chance for business.

Hansbrow's Hydrostatic.—Hansbrow's Hydrostatic air water pressure engine quartz mill, at Rocky Falls, (Irishtown) Amador county, according to the *Ledger*, has been in successful operation the past week, so the long mooted question as to whether it is a "practical machine" is settled. The mill is a model one and worthy a day's travel to look at.

The Result.—The railroad projects of the English capitalists, who recently visited the West, are summed up in a double track on the Erie road from New York to Salamanca, the construction of a bridge at Buffalo, and the extension of the branches of the Atlantic and Great Western road.

Engraved to Order.—Persons who desire to illustrate their individual establishments or business, should give us their orders for Engraving and Printing, and we will guarantee good work and reasonable prices.

DEWEY & CO.,
Patent Agents, Publishers and Job Printers, 505 Clay st.

OUR NEW YORK AGENCY.

Mr. Geo. M. Newton is our authorized agent in New York City, and will receive advertisements and subscriptions for the Mining and Scientific Press at regular rates. Sample copies of our weekly and monthly issues can be procured by calling upon him, at the office of the "Stockholder," No. 72 William street.

PHILADELPHIA AGENCY,

Parties wishing to subscribe or advertise in the Mining and Scientific Press can be accommodated by calling upon our Agent, Mr. Turner Hamilton, at the Assembly Building, 106 South Tenth street, Philadelphia, Pa., where sample copies of our publications can always be found.

The charges for drafts or orders, payable at any *distributing* post office in the United States, are as follows: Sums under $10, ten cents; over $ 0 and under $20, fifteen cents; over $20 and not exceeding $30, twenty cents. No orders for over $30 will be issued. The orders are payable in U. S. Legal Tenders, or the bills of the National Banks, and are purchasable at par for like funds; in other words, you pay $10, $20 or $30, and the registry fee, in greenbacks, and get an order for a corresponding amount in the same funds.

Traveling Agent.

Mr. Robert Lattimore is now on a canvassing tour for the Press through Butte, Colusi, Tehama, Shasta, and Siskiyou counties, and we recommend him to the favorable consideration of our friends.

To Blacksmiths.

An excellent, strong lad, from the interior, 17 years of age, desires to learn the Blacksmith's trade. His parents wish him to engage with a reputable firm, and learn his business thoroughly. Address, or inquire at the office of the Mining and Scientific Press. 2v11tf

STANDARD SOAP CO.'S
WASHING POWDER.

Facts that can be Proved:

One Pound of the Standard Soap Co.'s CONCENTRATED ERASIVE WASHING POWDER will do the work of two pounds of Bar Soap, saves half the time, labor and expense; does not injure the clothes, but turns them out sweet and clean. No additional Soap needed; works equally well in hard and soft water; excellent for woolens, as it contains no resin; splendid for dishes, milk cans and dairy fixtures. Ten pounds will produce a barrel of fine Soft Soap in ten minutes.

Manufactured and put up, with full directions for use, in pound papers and packages of 10, 12 and 24 lbs., by the

STANDARD SOAP CO.,
2v11-1m 207 Commercial street San Francisco.

HENDY'S
IMPROVED BLOW-PIPE.
This Convenient Helpmeet
— TO THE —
ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the Press of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth-piece and the pipe, enabling the blower to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continuous current of air is forced from the nozzle of the pipe by the mere contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

Price, Complete.....$5.00.
Call and examine samples.
Sent by mail, if desired. Address

DEWEY & CO.,
16v10-tf No. 505 Clay street, San Francisco

THE artesian well, at the western limits of Chicago, is one of the great curiosities of our country. It is bored to the depth of 711 feet, and is flowing at the rate of 600,000 gallons pure water daily, which is forced to the height of twenty-five feet above the grouud level. Two other wells are being sunk near by; one for oil and the other for water. The latter has been drilled to the depth of 650 feet, and about ten feet are added to it each day.

IT is stated that no flag of a Vermont regiment was ever in the keeping of the enemy during the war.

To Delinquent Mining Companies.

We hereby give especial notice to the Secretaries, Trustees and Shareholders, of such Mining Companies as are owing us bills for advertising of OVER SIX MONTHS STANDING, that we shall commence action, according to law, to collect the amounts due, if the same are not immediately settled.

DEWEY & CO.,
Office Mining and Scientific Press, Nov. 25, 1865.

Notice.—The interest of E. D. Waters, Jr., in the job printing firm of Dewey, Waters & Co., has been purchased by A. T. Dewey. The business of the late firm will be continued under the title of "MINING AND SCIENTIFIC PRESS JOB PRINTING OFFICE."

San Francisco, November 18, 1865.

Deserved Testimonial.

GRIZZLY FLAT, Oct. 18, 1865.

MESSRS. HUNGERFONN & HENDY—*Gentlemen:* We have run your Concentrator for several days past, in our 5-stamp Mill, and, as far as can be ascertained at present, it is a perfect success. When running at the rate of from two hundred and ten to two hundred and twenty-five revolutions per minute, we have lost neither quicksilver nor sulphurets. Formerly, when using copperplate riffles and blankets, we found that in spite of the utmost precaution, quicksilver would escape over them all. Wishing you all success, we remain Your obedient servants,

E. A. BIGLER.

EUROPEAN METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

Economy in Advertising.—The MINING AND SCIENTIFIC PRESS is the best and most ECONOMICAL mining advertising medium in this city. Our terms are less than ONE HALF the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The Press contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

A Business Compliment.

And in accordance with law and an order of the Board of Trustees, made on the ..th day of ..... , 186 , so many shares of each parcel of said stock as may be necessary, will be sold at the.....

....., on ....., the ..th day of....., 186 , at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

.....Secretary.

Office.....

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled, by mail or express, as may be desired.

To Publishers.

An editor and practical printer, of good experience and recommendation, desires a situation and will accept a moderate salary on trial. Address this office.

AN EXPENSIVE BANQUET.—At the farewell dinner which Sir Morton Peto and the English capitalists gave in New York, the other day, two hundred and fifty guests were present, and the dinner cost about $25,000, just $100 for each person, being, no doubt, the most elaborate and complete banquet ever given in this country. At least twenty-four kinds of wine were drank, and the price of some of the brands, the imperial Tokay for instance, was $50 per bottle.

STEAM WHALERS.—During the past summer a screw steamer, the Wolf, was sent out from St. Johns, New Foundland, and engaged in the Greenland whalefishery. She returned after an absence of two months, having been on the fishing ground only one month, with a full cargo, valued at $40,000. Whaling, by steam, we believe is something new.

SISTER OF MAJ. GEN. GRANT.—Some time ago an item was circulating to the effect that Maj. Gen. Grant had a sister living in Sutter county. The Marysville *Appeal* ascertains that it is true that Maj. Gen. Grant has a sister in California, and that the lady, Mrs. Dent, resides in San Joaquin county.

AN eagle was observed floating down Napa river, on a log, during the flood of Wednesday, and he had become so dreuched and exhausted by the copious rains as to be easily captured.

IRON WATER PIPES are about to be introduced into Grass Valley to take the place of the wooden ones, which have done very imperfect duty for the past six years.

THE owners of several mines recently rejected at Mazatlan by the French Commissariat have preferred a protest, which will be sent to the City of Mexico.

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements at their earliest convenience. New advertisements should be sent in as early as possible.

Monnt Davidson Gold and Silver Mining Company. Location of Works: Virginia District, Storey County, Nevada.

And in accordance with law and an order of the Board of Trustees, made on the 25th day of October, 1865, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, at the Salesroom of J. Middletou & Son, 404 Montgomery street, San Fraacisca, on the 9th day of December, 1865, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

JOHN F. LOHSE, Secretary.

Office, 318 California street, up stairs. no25

United States Gold and Silver Mining Company.—Mine located in Ravenswood and Santa Fe Districts, Lander County, Nevada.

Notice is hereby givea, that at a meeting of the Board of Trustees of said company, held on the 23d day of November, 1865, na assessment of one dollar and five ceats ($1.05) per share was levied upon the capital stock of said company, payable on the 25th day of November, 1865, in United States gold coin, to the Secretary, at his office.

Any stock upon which said assessment shall remain unpaid on Saturday, the 30th day of December, 1865, will be advertised on that day as delinquent, and unless payment shall ba mada before, will be sold on Monday, the 15th day of January, 1866, to pay the delinqnent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

T. L. BIBBINS, Secretary.

Office, 618 Merchant street, San Francisco, Cal.

Sharcholders who have paid the former assessments, or who hava advanced money to the Company, will be credited for tha same upon this assessment.

de2 T. L. BIBBINS.

Notice.—Tha Annual Meeting of the Stockholders of the UNITED STATES MINING COMPANY, will be held at the Office of tha Company, on Monday, Decemher 25th, 1865, at 3 o'clock, P. M.

J. M. BUFFINGTON, Secretary.

San Fraacisco, November 25th, 1865. no25

United States Mining Company.—Location, Virginia, Storey County, Nevada.

Notice is hereby given, that at a meeting of tho Board of Trustees of said company, held on the 15th day of November, 1865, an assessment of fifty ceats per share was levied on each and every share of the capital stock of said Company, payablo immediately, in gold or silver coin of tha United States, to the Secretary, at his office, or to F. A. MARSTON, Virginia, Nevada.

Any stock upon which said assessment shall remain unpaid on tho 16th day of December, 1865, will be advertised as delinquent, and unless paid, will be sold on Saturday, the 30th day of December, 1865, to pay said delinquent assessment, together with costs of advertising and expeases of sale. By order of the Board of Trustees.

J. M. BUFFINGTON, Secretary.

Office, No. 10 Government House, corner Sansoma and Washingtou streets, San Francisco, Cal. nov18

Wide West Gold and Silver Mining Company, Silver Mountain District, Alpine county, Cal.

Notice is hereby given, that at a meeting of tha Board of Trustees of said Company, held on tha 11th day of November, 1865, an assessment of one dollar ($1) per sharc was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at his office, or to the Superintendent at the mine.

Any stock apon which said assessment shall remain unpaid on Saturday, the 15th day of December, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 30th day of December, 1865, to pay tha delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

JOSEPH GREEN, Secretary.

Office, 330 Davis street, corner of Washington street, San Fraacisco. no18

Yaba Gold and Silver Mining Company, Brown's Valley, Yuba County, Cal.

Notice is hereby given, that at a meeting of tha Board of Trustees of said Company, held on tha 15th day of November, 1865, an assessment of two dollars and fifty cents ($2.50) per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin to the Secretary, at the office of the Company, No. 210 Pine street, up stairs, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 16th day of December, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 30th day of December, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

P. R. RINGSTROM, Secretary.

Office, 210 Pine street.

N. B.—The above assessment is for the purchase of Machinery, nov18

Book Printing should be considered and treated as one of the higher branches of the "Art of Arts," and its execution entrusted only to experienced and intelligent workmen. Strict attention will be given to all orders for BOOK AND PAMPHLET PRINTING entrusted to the Mining and Scientific Press Job Office.

LARGEST VINEYARD IN THE WORD.—It is said that the Buena Vista Vineyard, in Sonoma County, California, is the largest in the world. It consists of 6,000 acres, with 272,000 vines planted previous to 1865, and 700,000 planted or to be planted this year. Last year the yield was 42,500 gallons of still wine, 60,000 gallons of sparkling wine, and 12,500 gallons of brandy. One hundred men are constantly employed, and double that number during the vintage. There are 8,000 fruit trees, and large varieties of grapes.

COLD WEATHER.—San Francisco was visited, during the first of the present week with the coldest weather ever experienced here. On Monday morning, the water in the horse-troughs on the streets was covered with sheets of ice in some instances half an inch thick, and the ground, wherever moisture had accumulated, was covered with hoar frost.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

REMOVAL!

QUARTZ OPERATOR'S HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL, Authors and Publishers.

BOUND IN CLOTH—144 PAGES, DUODECIMO.

THE QUARTZ OPERATOR'S HAND BOOK is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

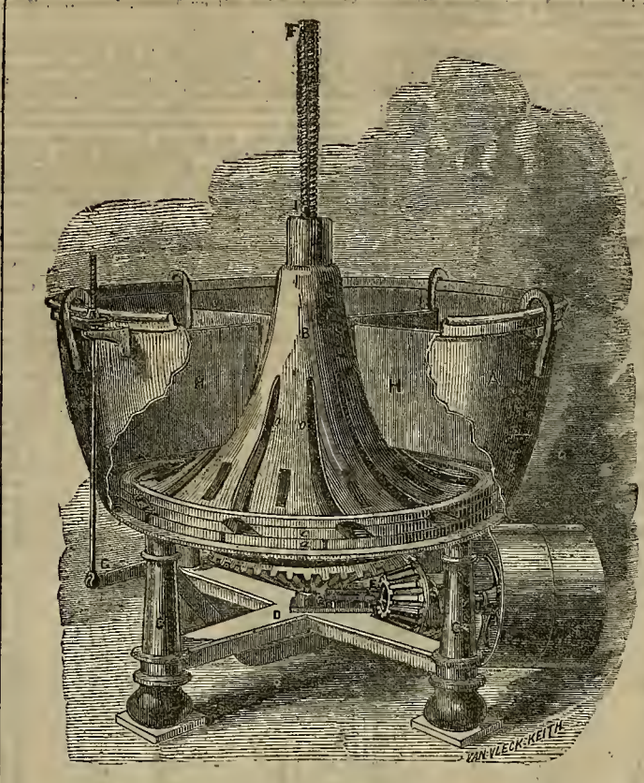
The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs. W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Bolshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable QUARTZ MINER'S HAND BOOK.

The Table of Contents of this book will be found on page 415 of the MINING AND SCIENTIFIC PRESS of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings,

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

WHEELER & RANDALL.

SAN FRANCISCO, June 13, 1865.

EUREKA PATENT BLASTING POWDER,

Price $3.50 Per Keg.

Office, southeast corner Battery and Commercial streets.

Room No. 9, with San Francisco Chemical Works,

CHAS. A. JAMES.....AGENT

For underground blasting in Tunnels, Mines, etc., this Powder possesses very great advantage—on account of it giving out scarcely any smoke after the blast. By using the same quantity in bulk as the gun blasting powder, you produce a much greater effect. 2v11qy

A NEW PROCESS.—Mr. Laffin, of Chicago, formerly of powder notoriety, is the inventor of a new process which saves nearly all the gold and silver in the ores. It consists in pulverizing as by present methods, and passing thus reduced *through melted lead.* It is said that ninety-five per cent. of the gold and silver contained can be saved. The process has been patented and will be tested here some time this summer. The question of cost will again come up, and may be the one on which the practicability of the process will depend. So says the Denver (Colorado) *Gazette.*

As flowers never put on their best clothes for Sunday, but wear their spotless raiment and exhale their odor every day, so let your life, free from stain, ever give forth the fragrance of the love of God.

Removal.

The Office of the MINING AND SCIENTIFIC PRESS has been removed to the old printing stand known as Waters' Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Minutie Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive JOB PRINTING OFFICE.

San Francisco, April 10th, 1865.

New Volume

— OF THE —

Mining and Scientific Press

Issued every Saturday. Each number contains 16 pages and 64 columns (size of Harper's Weekly).

PUBLISHED BY

DEWEY & CO.,

Patent Agents, Publishers and Job Printers
505 Clay Street, San Francisco.

THE ELEVETTH VOLUME

Of the MINING AND SCIENTIFIC PRESS commences under advantages most gratifying to its publishers, who assert, with pleasure, that a continued improvement in this journal may be anticipated by its numerous and rapidly increasing readers.

We shall continue to devote a large space in our columns to the various and best methods of treating ores and saving gold and other precious metals in every form, furnishing valuable hints to millmen, prospectors, oil-workers and miners generally, not to be found in any other publication.

New machinery, latest inventions and discoveries, and all matters pertaining to the mechanical, manufacturing and industrial resources of the Pacific States, will receive careful attention.

Stock market reports will be published as received from the official records. Our carefully compiled "Mining Shareholders' Directory" will prove a faithful monitor to parties holding stock, and a desirable record for reference to brokers.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

MITCHELL'S

COMBINED

FAUCET AND MEASURE.

This is one of the most useful inventions of the day, and is destined to go into universal use on this coast, as it has in the Eastern States.

The invention consists of a combined Faucet and Measure, so arranged that the liquid contents of any cask or other vessel can be drawn and accurately measured without the use of measures or funnels other than such as are embraced in the Faucet itself. While it obviates altogether the use of measures, it operates much more perfectly than the old method of drawing and measuring such liquids as have a tendency to foam up when drawn, as coal oil, linseed oil, etc.

The Proprietor has made arrangements with GALLAGHER, WEED & WHITE, of the California Brass Foundry of this city, for the manufacture of this Faucet, and is prepared to furnish the article or sell territories. Here is a chance for men with small capital to invest in a good business.

Residence, 320 Taylor street, near O'Farrell street.

D. C. MITCHELL, Prop'r.

San Francisco, Aug. 22d, 1865. 10vII.3m

HUNTER'S

PREMIUM

CONCENTRATOR, AMALGAMATOR AND SEPARATOR,

Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERATION daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 20 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste free gold and amalgam is amalgamated on the copper plates; no trace of ground mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, when with the greatest IRREGULARITY OF SPEED the best of results were given.

5th. There is no clogging or stopping to clean out the sulphurets and sand; consequently no waste from any inattention on the part of the attendant.

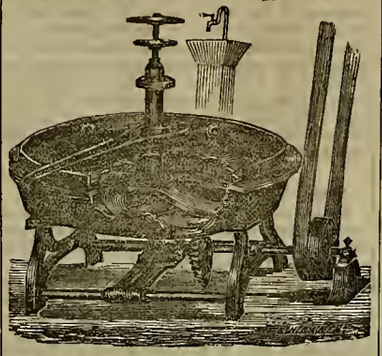
6th. In exhibiting the working of the machine (it is not run empty), all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see fit to test the machine with.

Give it a trial, and satisfaction is guaranteed. All orders and any information required, address

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15vII-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD'S

Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jeffersonian Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada City; Crail's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works, Miners' Foundry and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8-6df

BLAKE'S

QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
— AND —
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

Hepburn & Peterson's

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th. [Illustrated in the Mining and Scientific Press, April 9th, 864.]

HEPBURN & PETERSON.

HUNT'S PATENT

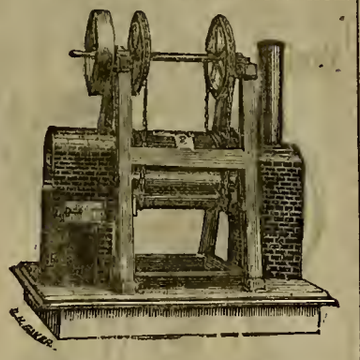
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 28 Second street, San Francisco

The Mechanics' Institute
AWARDED A
PREMIUM SILVER MEDAL
TO BRUCKNER'S
MECHANICAL ROASTING FURNACE.



Parties wishing to erect such Furnaces, are requested to leave their orders with

T. KALLENBERG,
12vII 416 Market street, San Francisco.

HUNT'S

IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

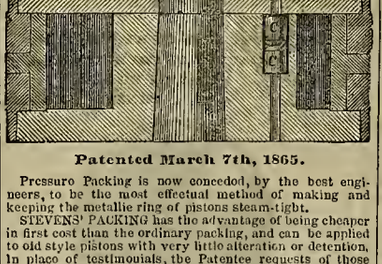
Stevens' Pressure Packing.



Patented March 7th, 1865.

Pressure Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight.

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which now have this packing in use—some of which have been running from three to twelve months without being opened, or showing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Alameda Railroad, or at the VULCAN IRON WORKS, where they can be seen, at any time, in course of construction.

10df **ANDREW STEVENS.**

SALMON'S

PROPELLOR AMALGAMATOR

— AND —

Challenge Settler

Has been in use and thoroughly tested, both in California and Nevada, with entire satisfaction to all parties concerned. These Machines are

Made entirely different from any others,

And with the same power will grind, amalgamate, settle and separate, more gold and silver ore than any others now in use. Manufactured at the SAN FRANCISCO FOUNDRY, where Machines can be seen in operation. Address

STOW'S

PATENT CHAMBER DRILL.

The greatest Labor-saving Machine ever invented for Quartz Mining. By using this Drill in shafts, tunnels, and all other rock blasting, three-fourths of the labor and over one-half of the powder will be saved. The Drill makes a chamber directly at the bottom of the hole, at any depth you wish, six times the area of the original hole, in all kinds of rock, in less time than a man can drill a 1¾ hole two inches deep. Requiring no tamping, it will be impossible to have a premature blast.

AT THE STATE FAIR held in Sacramento, September, 1865, a Committee, after examining both the Linscott's and Stow's Chamber Drills, reported as follows:

We, the undersigned, Committee on Mining Tools, do award to Henry M. Stow, of San Francisco, the FIRST PREMIUM for the best Chamber Drill for blasting rock, for the following reasons:

1st. For simplicity of construction.
2d. For durability of drill;
3d. For strength of drill.

The above Drills will be sent to any part of the State for $30, with one set of Cutters or Chisels that will chamber from 75 to 150 holes. Extra Chisels furnished at $2 50 per set.

The Drill may be seen at Mr. BUFFINGTON'S Office, No. 9 Government Block, corner Sansome and Washington streets, and at No. 511 Market street.

Drills will be delivered to any part of this State free of expense to the purchaser. Any information desired, or orders for Drills, address

STOW & COLLINS,
San Francisco

Oil Wells! Oil Wells!!

I received at the last STATE FAIR a special Premium for the best Expanding Drill for boring oil wells. The above Drill will bore the hole from ¾ inch to 2 inches larger than the inside of the pipe or tubing of the well, if desired, making the bore perfectly straight and round. The Drill can be attached to and work with any common drill at an expense of from $25 to $50. I will furnish all machinery for boring, or will take contracts for boring wells, and furnish steam engines and all tools required. Address,

HENRY M. STOW,
14vII San Francisco.

WATER WHEELS!

Equal to the Best Overshot Wheel,

POWER PLEDGED

IN EXISTENCE.

LEFFEL'S

AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 30¾. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds, will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
At Vulcan Iron Works, office 137 and 139 First street, San Francisco. 4vIItf

VARNEY'S

PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Settlers made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and settlers for themselves, at the **PACIFIC FOUNDRY,**
1vI San Francisco.

HUTCHINSON'S

Wine and Cider Mills.

FOR SALE,

THE EXCLUSIVE RIGHT FOR CALIFORNIA AND OREgon, or both, to Hutchinson's Wine and Cider Mills and Presses. To a person of small capital an unparalleled opportunity for a most profitable investment offers.

OIL WELL BORERS.

A CONTRACT WILL BE LET TO A RESPONSIBLE party to sink an Oil Well, as deep as may be required, on land belonging to the "Eel River Oil Company," situated in Humboldt county, Cal. For particulars, inquire at the office of the Company, No. 436 Jackson st., up stairs.

12vII-1m E. H. WILSON, Secretary

From Arizona.—The Marysville *Appeal* has seen a letter of late date from Prescott, Arizona, in which the writer says that any one who has the means to take a mill to that place can obtain any terms he may desire, and on the best leads in the country. The writer is well assured that they have rich mines there. All that is required is a little capital in mills, etc., to develop them. There are two mills running at Wickenburg crushing rock from the "Vulture." The first clean-up was made by Tyson & Co., a few weeks since, from a run of thirty tons, when they got $2,700. Chase's mill has not made a clean-up yet. Bowers & Co., have a little two stamp mill, crushing rock from the "Occidental," on Lyon's creek, about twelve miles from Prescott, and are doing well. Things are looking up considerably at present, and the Arizonians begin to think there is a better day near at hand for that country. The Indian difficulties are the chief obstacle to progress and success, and when they are to cease is still a problem.

What "They Say" of the Mining and Scientific Press.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the Press, and would like to have a full file.—[Napa Reporter.

The public should support the caterprise of the Mining Press, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

Under the management of Messrs. Dewey & Co., the Press has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

A good paper for this country.—[Humboldt Register, Ma.

Those who would have a good paper of this character, should subscribe now.—[Marysville Appeal.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will be second to no scientific record now published on this continent.—[Los Angeles News.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The Press fills the bill.—[Reese River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

Interesting and important to miners and Mountain men. [Butte Record.

The publishers intend to make it the "Scientific American" of the Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information to the pick and shovel fraternity.—[Trinity Journal.

Should be taken by every man owning "feet" [and brains] in this State.—[Beacon.

In no other ten journals can the reader find the same amount of reliable mining news as in the Press.—[Contra Costa Gazette.

Every stockholder in different mines will find it will pay to take and read this mining journal.—[Contra Costa Gazette.

The Press is to the Pacific Coast what the "Scientific American" is on the Atlantic. It deserves its success.—[Aurora Daily Times.

It is fully up to the times, and furnishes the latest mining improvements and intelligence.—[Calaveras Chronicle.

Every miner should subscribe for the Press.—[Calaveras Chronicle.

It presents a channel through which all mining notices may be cheaply consolidated into one sheet for the convenience of all stockholders.—[Mountain Messenger.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics. [Placer Herald.

1852. 1865

Thirteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, The Golden Era is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

The Golden Era is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

The Golden Era is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render The Golden Era a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome The Golden Era as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the Golden Era, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the Golden Era are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

IN THE GOLDEN ERA,

"THE FAIR LILIAS;"

Or, "LIFE IN DEATH,"

A New Story, by Pierce Egan, Author of "The Poor Girl," "The Flower of the Flock," "Lady Maud," "The Snake in the Grass," "Such is Life," Etc.

PIERCE EGAN is undoubtedly the most fascinating and attractive Novelist of the age. His stories are eagerly sought for, read and admired by hundreds of thousands in England and America. "The Fair Lilias; or, Life in Death," surpasses, in exciting interest and thrilling situations, all of the prodnctions of the celebrated author, and is Pierce Egan's masterpiece.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

GUIDE BOOK OF THE PACIFIC.—This is the title of a very neatly printed and elaborately prepared work, published in this city, by Sterling M. Holdridge. The book comprises 200 pages, and contains accurate statistics of almost every class of interest to persons traveling in any part of the United States and Territories west of the Rocky Mountains. The table of contents displays an amount of research and information which could be obtained only at the cost of much labor and expenditure. Full statistics are given of the ocean steamship routes and lines on the entire Pacific coast, tables of distances on the principal routes and lines around the world, interior steam routes in the Pacific States, railroads, express companies, stage lines, etc. It also contains thirteen carefully drawn maps, including all the Pacific States and Territories. The map of Arizona is the most complete and reliable of any yet issued. The maps, although designed merely for illustrating road and river travel, yet contain the location of many points not heretofore laid down on any other maps. Many novel and important features are introduced, which will be readily appreciated by every merchant and traveler into whose hands the book may fall. It is really a valuable hand-book, which should find its way into the possession of every merchant and traveler on the Pacific coast. In order to keep up with the changes of the times, it will be published semi-annually.

INSURANCE COMPANIES AND BANKS AT THE SOUTH.—All the insurance companies, but one, the "Virginia Fire and Mutual," and with three or four exceptions, all the banks which existed at the South, previous to the rebellion, have been ruined by the war, and swept out of existence forever. In their places, companies from the North, organized with Northern capital, are now going in and establishing themselves, to reap the rich harvests that are already ripening in the renewed business which is springing up everywhere in the late revolted States. The world never before presented so rich and large a field for the investment of capital as the South does to-day, and it is being promptly occupied by an energetic, active moneyed power, which will stamp its influence so deeply, so indelibly and so entirely different from all pre existing policies, as to cover up, within a single generation, all past and conflicting institutions.

CORRECTION.—In the notice which we made last week of the remarkable fresh water springs, etc., in the center of an immense salt plain, and erroneously placed the location in Humboldt county, Nevada—we should have said in the Silver Peak mining district, about 120 miles southeast of Aurora.

LATEST FROM THE OIL REGIONS.

The steamer which arrived on Tuesday last brings very encouraging news from the Humboldt county oil wells. The *Journal* of the 7th instant says that Messrs. Noble & Anderson, at Joel's Flat, have struck a fine vein of oil in their well, at a depth of 210 feet; they have filled all the barrels and casks on hand, and are now in search of more. Everybody think they have "struck it" in earnest.

The Oil Creek Well Company has sent for a steam engine and machinery.

The prospects of the Elk Horn Company are better than ever.

The Hawley Farm well has reached the depth of 275 feet, and has good prospects.

The Jeffreys well is 276 feet deep, and the prospects very encouraging.

The Erwin & Davis (Mattole) Company has reached a depth of 250 feet. They are working away with a hearty good will, and from the indications have every reason to hope soon to strike a paying vein of oil.

The Fortuna Well Company have attained a depth of 178 feet with most encouraging prospects.

The Paragon, Davis and others were obtaining flattering indications just previous to the storm. Many companies have suspended operations for the present, some perhaps on account of the weather, and others, no doubt to await the developments of their more energetic neighbors. The utmost confidence appears to be felt with regard to ultimate success in obtaining oil in paying quantities. The *Times* in speaking of the "strike" in the Noble's well, at Joel's Flat, says:

This begins to "pan out" oil of a very superior quality and in quantities sufficient to satisfy any man of moderate expectations. After pumping this well three or four times and exhausting the water, an increased quantity of oil was obtained each time. They had no conveniences at hand, however, to save the oil except three kegs, two boxes and an old tub. These they filled to overflowing at once, and pumped a considerable quantity on the ground, but the supply continuing, they determined to suspend pumping and provide means to save the oil, and they accordingly commenced building a tank out of such materials as they had at hand. As soon as this is completed a better opportunity will be afforded of judging of the capacity of the well.

OIL IN COLUSI.

The Colusi *Sun* of the 2nd inst., says: "The Antelope Valley Petroleum Company have now a steam engine with all the appliances for boring. The engine and the boiler were brought overland from Sacramento, and the other machinery came up on the boat. This company went down over two hundred feet by hand, and the prospects were such as to warrant them in going to an additional expense of five or six thousand dollars for an engine and other machinery. The other companies in that county are all steadily at work and there is not a man of them but is confident of striking oil.

OIL IN LOS ANGELES.

The Los Angeles *News* reports the oil prospects of that vicinity are proving very encouraging. Maj. Strohle, at Cañada de Brea, is making fine progress in boring, with the most encouraging prospect of obtaining a fine stream. We notice that the shipment of crude oil from the San Fernando Petroleum District, is increasing; orders are being filled here for cans and vessels, to the amount of several thousand gallons, to be used by former shippers, in addition to the vessels already in use by them. The oil which has been dipped from the open springs in the San Fernando district, it will be remembered, yielded at the refinery of Messrs. Hayward, Coleman & Co., in this city, forty-five per cent. of illuminating oil, and forty per cent. of lubricating oil, and was sold at the time in its crude state for one dollar per gallon, although it is not worth that much now.

Agates and Diamonds.

The Reese River *Reveille* is informed that about three miles north of Ione, there is an isolated mountain, some five hundred feet high, which is called Agate Mountain. Its entire surface, upon all sides, from summit to base, is covered with agates and concretions, and on digging into the soil they are found like potatoes in a hill. The agates are usually oval and sometimes globular in form, and varying from one to four inches in diameter, and are generally beautifully banded and striped. In the hands of a skillful lapidary they could be fashioned into pleasing ornaments. The various concretions are found in great abundance, and many of them are particularly beautiful. In their sphericity they are sometimes found as perfect as a ball, though generally the spherical shape is quite distorted. They are hollow and usually filled with crystals. On breaking them open, their interior is often found to be irregularly hollow and lined around with a layer of quartz crystals, forming what is termed a geode—a "little crystal grotto." Some of those hollow concretions contain a smaller concretion inside, which rattles when shaken in the hand.

A MINE OF DIAMONDS—PERHAPS.

Appropos to the above we condense the following, for which the Owyhee *Avalanche* is responsible:

Governor Lyons, of Idaho Territory, who has lately returned from the East, recently exhibited to the editor of the *Avalanche*, a diamond about the size of a pea, which he informs the editor was picked up about twenty miles, in a southerly direction from the Snake river ferry, by a man named Sam'l Wilson, who, while prospecting in a gulch in the foothills for gold, had selected *seven* from the gravel as curiosities, not knowing what they were.

Their history is as follows: In May last, while the governor was on the steamer bound to the East, this man Wilson, recognizing him, made himself known, and showed the governor these specimens, not suspecting what they were. The governer expressed the opinion that they were diamonds. On arriving in New York they both went to a jeweller, who pronounced them diamonds and bought one of them, paying therefor $1,000. The governor then made arrangements to meet Wilson on their return to Idaho, when both were to go again to the spot where they were found for further research. Wilson took passage on the unfortunate Brother Jonathan, and was lost, and the governor has now but the above clue as to where the specimens were found. Some of the Idaho folks have got "diamond on the brain," and will probably go in search of the "diamond" mine. Those who knew Wilson, have full faith in his sincerity and truthfulness.

QUERY.—The opinion of experts is solicited as follows: Can vapor, as distillation, be realized without an access of a certain degree of cold? The querist opines that heat, of itself, cannot produce vapor; that is, it cannot produce vapor without the contact or presence of cold; neither can cold produce congelation without the access or presence of a certain degree of heat.

QUERIST.

THE Moses Taylor sailed yesterday, and carried passengers at the following rates: First cabin, $125; second cabin, $75; and steerage, $25.

RICH SPECIMENS.—Mr. John H. Bradley, of Jackson, has shown us a box of specimens, forwarded to him by Mr. John Colehower, from the famous Poor-Man's ledge, near Ruby City, Idaho. Among others we notice the finest specimen of ruby silver with which we have ever met, and other specimens showing native silver and black sulphurets, such as would seem to fully warrant the reports of the extraordinary richness of that lode. The box also contained specimens from the Oro Fino and the Crook & Jennings; also, some fine specimens of stream tin from the mines of that metal lately discovered in that region. These ore specimens are to be deposited in the Odd Fellows' mineral cabinet, in this city.

GOLD FROM AN OIL WELL.—No small degree of excitement has recently been created in Western Pennsylvania, by the fact that gold bearing quartz has been struck in several oil wells, which were recently being sunk near Meadow Run, in Greene county. Several very rich specimens of quartz from one of the wells, brought up from the depth of 550 feet, have been exhibited to the editor of the Pittsburgh *Commercial*, and a barrel of borings from the same well have been sent to the U. S. Mint at Philadelphia, for scientific examination and assay. The same vein of quartz has been struck in two or three other neighboring wells; and much excitement has been produced in the neighborhood, owners of land there holding them at fabulous prices, much in advance of their value as oil lands.

MECHANICS' FAIR REPORTS.—The official reports of the Fifth Industrial Exhibition of the Mechanics' Institute are now in press, and will shortly issue. The work will embrace the Opening Address of Hon. F. M. Pixley, the Rules of Exhibition, an Alphabetical Catalogue of Articles Exhibited, Art Gallery Catalogue, reports of the Executive Committee, Treasurer and Examining Committees. It will doubtless form a neat and valuable work. We shall continue to publish portions of the most important reports in our columns, from week to week.

TRIAL TRIP OF THE STEAMBOAT CAPITAL.—The new steamer Capital made her engineers' trial trip on Thursday, and performed admirably. She is a splendid boat, equal in her fittings and furniture to any in the world, but not so spacious as some on the Hudson river. She is one-third larger than the Chrysopolis.

STATE NORMAL SCHOOL.—The closing exercises of the State Normal School will be held in Lincoln Hall to-day, commencing at twelve o'clock M., and continuing until four o'clock P. M. They will consist of reading, original compositions, valedictory, calisthenics, free gymnastics, and exercises of the class from the Model School, with an address to the graduating class presentation of diplomas, etc. The public are requested to be present.

THE call for the Miners' Convention to be held at Sacramento on the 17th of January next, the day and place suggested by us, appears to meet with the universal approbation of the press everywhere, and we doubt not it will be responded to by a large and full assemblage of the miners from all parts of the State.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

Mining in the Pacific States, etc., Past, Present and Prospective.

BY PROFESSOR ROWLANDSON, F. G. S. L.

Independent of many other reasons which could be adduced, the advent of a Mining Convention would be a sufficient one for reviewing, at the present moment, the past and present aspect of mining affairs on this coast, with a view towards a prospective improvement, especially as no inconsiderable amount of the mismanagement hitherto pursued may fairly be attributed to a general misconception on the part of the public respecting mining resources; exaggerated and mistaken ideas having prevailed, which even in California have not yet been fully sobered down by the existing adverse aspect of affairs—an adversity produced in the most noted and remunerative mines on the Comstock lead, more through the error alluded to, than from culpable and willful mismanagement. That a not inconsiderable amount of extravagance has prevailed, will, perhaps, be conceded without a dissentient voice being heard against the charge. The extravagance alluded to, however, chiefly originated in the inflated notions which prevailed respecting the extraordinary rich quality and inexhaustible quantity of silver ores attainable, which it was erroneously and generally supposed would increase in value as well as quantity, in proportion as the mine was developed in depth, a delusion still harped upon, and far from being generally dissipated, notwithstanding the incontrovertible evidence of the emphatic fact, patent to all, that after the rich superficial bonanzas had been pierced on the Comstock lead, every subsequent fifty feet penetrated exhibited a slight but sensible depreciation in the value of the ore obtained at every successive advance in depth; not averaging in value, at the present time, more than fifty dollars per ton at an average depth of probably not more than 300 feet. This state of affairs called forth, a short time ago, the following comments in the commercial article of the *Alta California:*

"The singular position of the mining stocks to which we recently alluded is not generally borne in mind. It is that the value of the property is not one-fourth what it was some time since, notwithstanding that the product of gold is quite as large. Thus, the market value of all the mines which compose the Comstock lode was, two years since, $20,000,000. Since then a great accumulation of property of various kinds has taken place, and the yield of metal is as large as ever, while the value of the stock has fallen three-quarters. Or thus:

	Stocks. Market Value.	Nevada Bullion Mined.
1863	$20,000,000	$12,486,233—year.
1865, Oct. 2	11,000,000	10,000,000—9 months.
1863, Nov. 21	5,000,000	11,500,000—11½ mos.

This presents a startling result, and requires the earnest attention of stockholders and capitalists. Why was it that in 1863 the market value of the lode was nearly double the annual product, while at this moment it is only half the product? Why is it that the same product now involves assessments, while in 1863 it evolved large dividends? There is certainly room here for investigation. The blight of mismanagement has chilled public confidence. But surely there are active and enterprising capitalists enough to make that productive property pay some profit to long-suffering stockholders."

The "singular position" here alluded to is easily accounted for, by the fact that ores, as a general rule, decrease in value, under certain limitations, proportionately as they are obtained in depth; while the expenses of extraction increase, the cost of reduction remains the same. The existing state of things, as regards Washoe mining, has by no means taken me by surprise; on the contrary, I publicly indicated its probability some years ago, and anticipated their occurrence anterior to this; which would have been the case but for two circumstances—namely: First, that the superficial bonanzas (rich places or pockets in the mines) on the Comstock lead proved rich in quality, and great in quantity beyond all reasonable anticipation, based on experience; and, Secondly, when the value of the ore per ton began to materially depreciate, the gross yield of bullion was made up by extracting, in the course of a few months, an amount of ore which ought to have been spread over two or seven years. In this way dividends were kept up, whilst the mines were being rapidly ruined. Had the chief mines only extracted ore adequate to the supply of their own mills, several of the most noted mines at Washoe would, at the present moment, have had their shares quoted in the market at far higher rates than those at which they are now selling.

In order to afford the reader some idea of the magnitude of the interests involved, I subjoin the following statement of

THE COMSTOCK LODE.

Floyd Frizell, County Assessor of Storey county, has made a report on the resources of that county. He gives the following statistics for the first three quarters of 1865:

Whole number of tons worked, paying over $20 per ton	$ 257,728 00
Gross yield from same	9,316,093.54
Average yield per ton	36 14
Whole number of tons of ore sold	18,577.00
Amount received from sale of same	123,322.06
Average price per ton	6 63
Gross yield from ores sold	123,322 06
Whole number of tons shipped out of the State	6
Yield per ton	$ 500
Gross yield	3,000

In addition to the general returns given above, it may be well to add an individual instance, such as is quoted by the Savage company, as collated from the general report of July last, and other published sources, from which it will be gathered, that by far the larger proportion of the ore raised is only worth about forty dollars per ton; probably the quantity worth this and lower rates being more than as one hundred to one, as compared with all obtained above that value at the present moment:

Ores.	Tons.	Yield per ton.	Total yield.
Ore, 1st class	1,941	$119.92	$232,764 72
Ore, 2d class	49 303	41.00	2,021,423 00
Ore, 3d class	199	14 94	2,973.06
Totals	51,443	43,81	$2,257,160.78
Cost of mining	$10 22	$531,946	
Cost of reduction	21.76	1,115,000	
Total cost	$32.00		$1,646.340.00

The mere cost of mining and reduction was $32 per ton, and the yield $43.75 per ton, which left $520,000 to meet all other expenses—office, legal, etc. Since then the ore has been reported to yield from $37 to $40 per ton, which would give $7 to $8 profit if there had been no increase of expense. The quarterly returns of the Assessors of Nevada give the quantity mined at 6,075 tons, averaging $39.81. The receipts were reported as follows:

	Yield.	Value.	Debt.
For July	$.2@45	$67,200	$150,000
For August	32@40	80,000	
For September	@40	90,500	150,000
For October	@39	137,000	271,000
Total		$380,700	

On the receipts last year, when the average yield was nearly $44, eighty per cent. was expended for mining and reduction. The average yield reported since then has been only $40, and was all sunk, with $80,000 amount in addition, up to last month, when the debt was given at $271,000, including the Minnesota mill.

In proof of the statement made by me years ago, and now emphatically repeated, that in silver mines, after passing through the uppermost bonanzas, the ore sensibly decreases in value, may be adduced the returns from the following mines for the first and last quarters of the current year:

	MARCH QUARTER. Tons Ore.	Avg. Yield.	Gross Value.	SEPT QUARTER. Tons Ore.	Avg. Yield.	Gross Value.
Gould & Curry	9,041	$52 78	$477,183	12 289	$34 45	$423,326
Savage	14,480	42 06	608,319	6,695	39 81	266,544
Chollar	11,000	40 10	440,000	4,463	36 43	162,619
Potosi	9,088	33 90	308,120	2,587	40 09	103,721
Ophir	2,265	25 48	57,712	226	25 23	5,703
Mexican	60	300 00	18,012	3,653	26 23	96,279
Yellow Jacket	10,201	37 50	720,107	13,150	38 24	504,213
Belcher	4,540½	69 05	314,190	7,801	22 87	180,744
Crown Point	1,043	34 81	36,334	1,267	33 04	44,404
Imperial	6,397	31 47	201,334	7,189	46 70	335,759
Empire	3,412	34 94	119,208	4,130	25 00	103,250
Uncle Sam	150	30 72	4,608	.....	.....	.....
Total	80,677	40 97	3,304,964	62,550	35 12	2,226,562

It will be observed that a few mines in the above list exhibit a slight increase in the value of the ore; with respect to which it may be remarked that it will be found generally in such cases that the superior and richer streaks of ore had not yet become exhausted, and also that the bulk of the ores extracted was from inconsiderable depths. In the Gould & Curry, however, it will be remarked that the decline in value amounts to nearly thirty per cent., and although more than one-third more weight was raised in the last, in place of the first quarter, yet that greater quantity was insufficient to replace the loss occasioned by the decadence in quality; the lesser quantity during the first quarter realizing more by $53,000. The reader is requested to bear all these facts in remembrance, as they will hereafter be commented on more at length, under other heads. A statistical synopsis was, however, required to illustrate what will follow. The next incident which I shall allude to is—

THE VICIOUS CONSTITUTION OF MINING CORPORATIONS.

I am far from attributing this defect to design. It has risen, in most instances, from undue hasts and deficiency of knowledge as to what was required, in order the more perfectly to guard the interests of stockholders from imposition. The defects alluded to have in some instances led to irregularities. Perhaps frauds would be the more fitting term where dividends have been declared on borrowed money, and assessments made immediately afterwards to repay the loan; or the still more frequent practice of declaring dividends whilst the mine was more than the like amount in debt. Such malpractices are so glaringly unjust, and have prevailed so extensively, as to call from the Governor of this State some marked observations respecting the expediency of enacting a law to prevent, in future, such practices, and also recommending that each incorporated mining company shall be compelled to make a statement of its affairs, at least once in six months. [See extracts from Governor's Message in another column.]

I am not so Utopian as to believe that any law can be made so perfect as to protect the pockets of weak and credulous people prone to excitement from the smart practices of designing men; the history of bubble manias, from the celebrated South Sea scheme, down to the present time, is a proof of its impossibility. Much, however, may be done to secure the general public from the effects of the more flagrant malpractices, which have so frequently been put into operation; and as some legislation is probable, in order to assist, as much as possible the efficiency of any future law, I propose drawing the attention of those interested in mining to the English regulations under

THE CORNISH COST-BOOK SYSTEM.

I have termed this system "Cornish," because it undoubtedly first arose and was recognized under the Stannaries Court.* So equitable, however, were its principles, that it gradually became adopted in all mining districts throughout England, in connection with copper, lead and tin mines. It always has been and still is, a matter of doubt whether the limited liability of shareholders, acquired under the protection of the Cost Book system, could be maintained outside of the Stannaries jurisdiction. So equitable, however, was its principles found to be, that the English judges (one of the most immovable class of men in existence, and ever opposed to innovation), at first winked at and then accepted it as an item of general common law; perhaps the more readily in consequence of the monstrous absurdity which existed previous to the passage, within the last ten years, of the limited liability law; prior to which any shareholder in any joint stock company, unless it was one incorporated by Royal Charter or Act of Parliament, was liable to the whole of its debts, down to his last pound and last acre.

The title of this system took its origin from the fact that the laws and by-laws of the company were written in the Cost Book, and signed by all the adventurers. In it, also, is recorded all the proceedings and resolutions occurring at their periodical meetings, which at first were held monthly, afterwards, in many cases, at intervals of two months, and latterly, since very large companies have been formed, once in three months. The last term is one which I should recommend for legislative adoption here, as the longest time which ought to be allowed, without giving the shareholders an opportunity of expressing their assent or dissent to the past, and also their concurrence in the future management of the company. It is quite probable that originally the accounts of the company were kept in the Cost Book, along with the other proceedings; the former, however, are now, and necessarily so, in large companies, kept in a separate sett of books, similar to those used in mercantile affairs.

THE GENERAL PRINCIPLES OF THE COST BOOK SYSTEM

Are, that the liability of every adventurer is limited to the extent of his share; for, by applying to the purser to ascertain his share of the debts and liabilities of the concern, and on paying the same, he can at any moment be relieved from further pecuniary liability, and have his name erased from the Cost Book—forfeiting, of course, his share in the concern, which then becomes the joint property of the remaining stockholders. The affairs of the company are conducted under the management of a purser, whose business it is to pay and receive moneys, and assist in the general management of the mine—the operative departments being under the care of over and underground captains. It is the duty of the purser to present, at the periodical meetings of the adventurers, a correct balance-sheet, containing the disbursements and receipts of the mine during the interval which has elapsed from the last meeting, *and also an estimate of the probable receipts and disbursements which may be anticipated in the interval which will occur prior to the next periodical assemblage of the adventurers.* When the receipts considerably exceed the disbursements, as is the case with prosperous mines tolerably well opened out, the shareholders present declare a dividend out of the surplus; in the opposite case, as will occur with mines only commencing operations, the shareholders levy an assessment sufficient to meet the estimated outlay. It is held, also, that any extraordinary outlay, except when arising from some imminent necessity, over and above that directed at the periodical meetings of the shareholders, is executed at the risk and cost of the purser.

Enact a similar law, and for "purser" insert the word "trustees," and a remedy will at once be obtained for the major part of the grievances complained of in California. The appointment of officers, the fixing of salaries, etc., etc., are all settled at such general meetings. Extraordinary outlays, such as purchasing new engines, etc., are decided upon in the same manner, so that the purser, trustees, directors, or by whatever other name the executive officer or officers may be termed, have little responsibility, other than that imposed in seeing that the funds of the company are fittingly employed.

A glance at the chief points in the above sketch, must satisfy any business man what an effectual guard the system proposed must exert against many of the improper practices so generally complained of, such as "freezing out," etc., excepting in consequence of the inertness and inattention of the bulk of the shareholders, in which case they have only themselves to blame.

I may here be permitted to remark, that not a little of the present adverse condition of several of the most noted Washoe mines, may be attributed quite as much to the apathy of stockholders, as to the misconduct of those intrusted with the management of their affairs. So long as $125, $100, or $75 per month per per foot was being disbursed in dividends, no complaints were made or questions asked; and this, too, notwithstanding it was quite apparent that from the manner in which these amounts were realized, the respective mines were being ruined in consequence of this exhaustive process, as will be explained more fully hereafter. Many of the points above commented upon, could be adopted without any legislative enactment; that which is inserted in italics is particularly recommended to attention.

A NOTICEABLE FACT.

It may perhaps prove an interesting item to many of your readers, to allude to the apparent oddity frequently observed in the number of shares into which Cornish mines are frequently seen to be subdivided, which, within my recollection, have run from 128 to 256, 512, 1,024, 2048, to 4,096. This custom has arisen from the divisibility of these numbers into lesser ones, without fractional remainders. I have long thought that originally the number of shares adopted was *sixteen*, a number which is still very generally employed in Wales, and are locally termed ounces. The division of the avoirdupois pound into the same number, and the Indian rupee into sixteen *anas*, have most probably been adopted for similar reasons; namely, the advantage of subdivision into half, quarters, etc., and their subdivision down to one, without giving origin to any fractional remainder—an advantage incalculably great amongst a rude people, unacquainted with the more recondite points of arithmetic.

[To be Continued.]

*Courts connected with the Duchy of Cornwall, whose business related principally to regulating the mining and smelting of tin. These courts claimed jurisdiction not only over Cornwall, but also over a large part of the adjoining county of Devon.

GOLD YIELD OF OREGON.—The Dalle *Mountaineer* gives the following table of the estimated annual product of gold and silver on the Columbia and its tributaries:

Product of John Day Mines	$1,500,000
" Warren's Diggings	750 000
" Elk City	250,000
" Florence	200,000
" Clearwater Station	200,000
" Oro Fino	600,000
" Bars of Salmon, Snake and Clearwater	300,000
" Clark's Creek and M. Basin	150,000
" Colville, Pen d'Oreille & Kootenai	1,000,000
" The Montana trade	1,000,000
" Auburn	500,000
Total	$6,950,000

The *Mountaineer* remarks upon this, that these very considerable sums are the product of districts which only need population to indefinitely increase the yield of gold and silver.

THE waters of the Seine, which run through Paris, in consequence of the continued dry weather, have now fallen to the lowest possible point. Hundreds of men are engaged in exploring the bed of the river, where exposed, with the view of finding trinkets, kitchen utensils, metal, or other objects.

Useful Information.

The Philosophy of Sleep.

NUMBER FIVE.

QUANTITY OF SLEEP.

The quantity of sleep required by grown-up people ranges between four and nine hours. This has partly to do with peculiarity of constitution. With some the mind and body work quietly and without irritability; others, going through the same round of business and amusement, are more exhausted; the latter require longer sleep. But use has much to do with this, as with other functions; and many suppose a much longer period of repose necessary to them than their health actually requires.

Too much sleep is relaxing. The best rule, for those who are in health and sleep well, is to rise after their first sleep,—when one feels refreshed, and can rise at once with alacrity. Upon indulging in a second sleep, a free perspiration often ensues, and one wakes relaxed, and heavy from sleep, and exhausted.

Women require more sleep than men; those of the nervous and sanguine temperaments more than the phlegmatic and bilious. The necessary quantity of sleep for adults varies from four to nine hours; from seven to eight is the want of the majority. Persons under training sleep from eight to ten hours.

Those who sleep nine or ten hours from indolence, probably sleep less concentratedly, and have not the same intensity of repose which those have, who, sleeping only when it is necessary, drop sound asleep at once.

Infants, for the first month, pass almost their whole time in sleep; or they alternately take nourishment and repose. The quantity of nourishment necessary for their growth fatigues them, and they sleep to recruit their digestive powers. It is the same with those who are recovering from exhausting illness. They often require the same quantity of sleep, the same light and frequent meals. Till the age of three years, children require sleep during the day, and pass half of their time in sleep. The period of sleep is then to be gradually reduced; a child at seven should not sleep more than nine hours. With weakly children, it is important to bear in mind the exhausting character of more prolonged, or, as it really is, renewed sleep. They should rise early; and if more sleep is necessary for their strength, they may lie down and take repose for a short period during the day.

Children should never be wakened suddenly; their nervous system, tremblingly sensitive, is liable to receive injury from the lightest causes. Great care should be taken to exclude from, or to prevent arising in, the minds of children, those superstitious fears, and that terror of the dark, which they are so disposed to full into.

When age begins, the quantity of sound sleep lessens. In extreme age the tendency to longer sleep returns, and part of the day is passed in somnolency, the more necessary, that the rest at night is frequently broken.

The celebrated De Moivre slept twenty hours out of the twenty-four, and Thomas Parr latterly slept away the greater part of his existence.

Dr. Rush observes of the wakefulness of old people,—"Such is the excitability of the system in the first stages of old age, that there is no pain so light, no anxiety so trifling, and no sound so small, as not to produce wakefulness in old people. It is owing to their imperfect sleep that they are sometimes as unconscious of the moment of their passing from a sleeping to a waking state, as young and middle-aged people are of the moment in which they pass from a waking to a sleeping state. Hence, we so often hear them complain of passing sleepless nights. This, no doubt, frequently is the case; but I am satisfied, from the result of an inquiry made upon this subject, that they often sleep without knowing it, and that their complaints in the morning, of the want of sleep, arise from ignorance, without the least intention to deceive."

Dreaming is universal among old people. This recollection of their dreams has more or less to do with their imperfect sleep.

PERIOD FOR SLEEP.

It is unnecessary seriously to argue that the night is the proper time for repose in temperate climates, for no one will deny that we must exist alternately in waking and sleeping, or will doubt that day is the proper time for the former. Our eyes are formed to use by day; Nature, in her brilliancy of coloring, can be seen then only; and the direct action upon the skin, of the light and heat of the sun, is necessary to perfect health? But we have still a choice to make. For in the winter there is more darkness, in the summer less, than the necessary period of repose demands. Are we to borrow hours of waking from the evening or the morning of the long winter's night? The common sense of the world has decided that the latter is preferable.

Those who are engaged in business are, through this habit, beforehand with the day; nothing need then be hurried; the offices of the day may be well thought over, and every necessary arrangement planned. Nor is there any better time, if one has superfluous leisure, for literary pursuits, than the early morning hours. It is indeed too much the custom, and sometimes hardly avoidable, to throw one's studies late into the night, when there is no interruption, and there happens to be spare time. This practice, however, forms a most injurious combination with a life of business, as it destroys sleep, that is so needed. The mind, instead of wholesomely tiring towards eleven, is wakened up, stimulated afresh by its own exertions, and hour after hour glides by; and when at length one's couch is sought, the busy thoughts cannot detach themselves from our pursuits, the mind cannot be put out of gear. One whose time is his own, may, if he pleases it, convert night into day, day into night; and if during some part of the day he takes wholesome exercise in the open air, and his diet is moderate, one cannot say that his health will necessarily suffer by this substitution of an artificial for the natural period; but the probability is, that the habits of life which would co-exist with such indulgence would be irregular, and that therefore it would be indirectly more injurious. One who combines with late hours of study habits of active business in the day, will certainly, whatever his original strength, find both his health and mental powers easily impaired.

[To be Continued.]

Rapid Desulphurization---Scientific Experiment.

The Monitor *Gazette*, of the 2d instant published in the town of Monitor, Alpine county, in this State, is responsible for the following:

We witnessed one day this week the successful application of Arnold's new process for disintegrating quartz rock. The quartz taken from the newly opened lode of the Monitor G. M. Co. is about as hard a quartz as is ever found; so hard that four well tempered drills were required to put down a ten inch hole for blasting, and a good deal of beating with sledges to break it into handling shape. A solid lump of this, of about twenty pounds weight was placed in a common fire-place and brought to red heat, and then immersed in Arnold's mixture—a liquid preparation wherein lies the secret. A terrible commotion ensued, which continued until the liquid had entirely penetrated the lump, setting free the gases therein contained which filled the room like a cloud, and crumbling the rock into more than a dozen pieces, any one of which, after the ebullition ceased, showing that every part of the rock had been penetrated—could be crushed by the heel to fine sand. We consider this a fair test of the disintegrating power of the process; nothing could be more perfect, and for this alone the discovery is invaluable, as the cost of reducing to a fineness necessary for amalgamation is greatly reduced, the first cost of the machinery necessary to produce certain results being ten-fold less, and the amount which may be accomplished by any given works increased to the same ratio. It is claimed however that disintegration is the least of the merits of this process, that it does and will desulphurize and destroy all base metals in any ores, rendering those of the most obstinate character tractable and easy of amalgamation by the simplest means. We shall pursue this subject farther, and not only as to the last claimed power, but in regard to the cost of the whole process which it is claimed does not exceed here over two dollars per ton.

SINGULAR PHENOMENA.—Quite an interesting and singular class of phenomena recently occurred at an oil well, near the mouth of Dunkan Creek, on the Monongahela, which is related by a correspondent of the Pittsburg *Oil News*, as follows:

The Coal Bank Well, No. 4, took another fit on last Friday evening when I was present. It forced the water and stones at least two hundred feet above the top of the derrick for at least forty minutes, throwing out stones, that would weigh two pounds, a sample of which I will show you when I come home. The well is all the time flowing in the conductor about two feet high, and it seems that those violent emissions occur about once a week; as this is the third one since the well has been sunk, and all of them occurred on Friday. I have quite a number of specimens of rock and soap stone that has been thrown out. The shisve timbers on top of the derrick are very much torn and splintered, in fact so much so that they are unfit for use again, all from the effects of the stones thrown out striking them.

THE GOVERNOR'S MESSAGE ON THE MINING INTEREST.

Governor Low sent in his first biennial message to the Legislature on Thursday last, an examination of which shows that the various State institutions, and the affairs of the State generally, are in a hopeful condition.

We give below the Governor's remarks on the mining interest of the State, the progress of the State Geological Survey, and the necessity for action by the present Legislature to secure the benefit of the Act of Congress donating to the State 150,000 acres of land for the establishment of an agricultural college. The Governor very properly suggests that, although the Act of Congress requires that agriculture shall be the chief science taught at the institution which may be established on the Land Fund donated, it does not preclude the the union with agriculture of any other of the useful sciences. We append so much of the message as refers to these matters:

MINES AND MINING.

Since the last session of the Legislature, the question of taxing the products of the mines, and the sale of mineral lands, have assumed importance; and the action of Congress in regard to the former has caused considerable uneasiness in the mining portions of this State, as well as in our neighboring States and Territories. Fortunately, the earnest and well-timed protest of our delegation in Congress caused such a modification of the tax that but little complaint has since been made. Since the last adjournment of Congress, several of its distinguished members have visited the mineral regions of Colorado, Utah, Montana, Idaho, Oregon, Nevada, and California. I anticipate great good as the result of their visit. They will return to their places in Congress fully convinced, I think, that the present plan of working the mines is the best, and that it would be equally unwise to sell the mineral lands, or to diminish the production of the mines by imposing onerous taxes upon them. The information they can and will impart, considered, as it must be, free from prejudice or interest, together with the efforts of the delegation in Congress from this coast, will be likely to set at rest some of the projects that have been brought forward in Congress, which, if enacted into laws, would be detrimental if not ruinous to mining interests.

The development of gold, copper, and other mines in California, has received a marked impetus during the present year. The opening, in various portions of the State, of vast numbers of rich and productive quartz ledges, gives assurance that in the "placer diggings" we were but at the threshold of our mineral discoveries; and affords ground for the belief that we are entering upon a field that will be as permanent as it is productive.

In this connection it is a source of regret to observe that a check has been given to mining investments in Nevada. The interests of both States are so nearly allied that the causes which injure one must sooner or later affect the other. In view of this, it may be well to ascertain, if possible, the influences that have induced this sudden depression in the value of mining property in Nevada, that we may ascertain whether any portion of this loss has resulted from a want of restrictions and penalties in the incorporation law of this State, under and by virtue of which many of those companies were formed.

The management of the mines in Nevada has been a source of discussion and animadversion, both by the people and the press. What proportion of the losses has been caused by the recklessness, extravagance, deception, and fraud of the officers and agents of incorporated mining companies, I have no means of ascertaining. If the representations of California capitalists, whose losses in this connection may be estimated by millions, are to be relied upon, no small share of the decline in values may be traced to these causes.

While the spirit and advancement of the age require that laws shall be enacted providing for the association of capital in the form of corporations, it is the duty of the law-making power to insert such checks and safeguards in these enactments as will protect the stockholders, as well as the public who do business with them, from losses occasioned by the dishonest practices of agents and officers. With this view, I would recommend that the statutes of this State providing for the formation of corporations for mining purposes be revised, and so amended as to provide for the infliction of severe penalties on trustees and officers of companies who shall borrow money with which to pay dividends, or who shall misrepresent the actual condition of a corporation of which they may be agents or managers. Acts committed by officers of a company, for the purpose of deceiving the stockholders of the public as to the value of property belonging to such institution, either by the payment of dividends that have not been earned, or withholding dividends that have been earned, or similar acts, should be declared felonies, and punished as such.

I would also suggest the advisability of compelling a published statement to be made of the actual condition of each company, at least semi-annually.

GEOLOGICAL SURVEY.

During the past two years, such progress has been made in geological explorations of the State as the limited appropriations would admit of. Full particulars relative to the survey will be gathered from the report of the State Geologist, herewith submitted. The Act of April 4th, 1864, provided for the publication of a report "in the form of a geological, botanical, and zoological history of the State."

The plan of publication adopted by Professor Whitney calls for the following volumes:

No. 1—Physical Geography;
Nos. 2 and 3—General Geology;
Nos. 4 and 5—Paleontology;
Nos. 6 and 7—Economical Geology, Mining, and Metallurgy;
No. 8—Botany;
Nos. 9, 10, 11 and 12—Zoology.
No. 13—Maps, Sections, and Plates.

Of these, one volume of paleontology is published; another—the first on geology—is now finished, and on the way hither from New York, and considerable progress has been made in the preparation of some of the other volumes. An accurate map has been drawn of all the central portion of the State, which will be extended as the explorations progress.

I trust the Legislature will carefully consider the matter of the geological survey, and give to it the aid which its importance justifies. Let no hasty action be taken which will be repented of in future. It is a work which will amply repay the State for the expenditure, viewed in a pecuniary light. In addition to this consideration, the result of these explorations and investigations will prove a valuable acquisition to science, which, in its explanation of and research into the laws of nature, does so much to develop all branches of material progress.

AGRICULTURAL COLLEGE.

I desire to call your earnest attention to the Act of Congress donating to this State 150,000 acres of land for the establishment of an Agricultural College. To secure this munificent grant, it becomes necessary that the required steps be taken by the present Legislature, else it will be forfeited by the expiration of the five years in which the State must act affirmatively. Should the national endowment be lost to the children of our State by reason of our neglect, the merited censure of coming generations would be cast upon the memory of those whose duty it is to act at this time.

The Act of Congress contemplates that agriculture s. all be the leading science taught, yet it does not bar the introduction of all branches of learning; and I would recommend that provision be made for every scientific profession.

When we glance at the wide and varied character of the already discovered minerals in our State, we can but admit the necessity of a more general diffusion of knowledge of geology and civil engineering among our people; nor least among our educational wants in a school of agricultural chemistry.

By reason of a peculiarity of climate, our agriculture must be conducted on entirely different principles from that of most agricultural countries. In the Atlantic States, agriculture is an unvarying routine, while with us it is a labor admitting of varied experiments involving scientific investigation. Among the agricultural industries destined to assume the highest importance among our people, may be mentioned vine and silk culture, of which we possess but a superficial knowledge. Each of these branches of remunerative and pleasant toil has, in Europe, for ages engaged the attention of the most cultivated intellects. France owes much of the stability of her population, and the high order of her civilization, to silk and vine culture. How much might be expected from the education of a large number of our youth in a scientific knowledge of these and kindred pursuits.

For the present purpose of a college, costly buildings will not be required. A true economy would suggest that no expense be spared to secure the highest order of talent in the various professorships, and requisite apparatus for the instruction of pupils. It is the individual professors who popularize all renowned institutions of learning rather than imposing edifices. The proverbial liberality of Californians may be confidently relied upon to hereafter furnish the means for the erection of costly structures, and their endowment with professorships.

The consolidation of the Seminary Fund with the proceeds of the sale of the Agriculture College lands, and the necessary merging of the Agricultural College and the State University into one, would, it is believed, give one institution a good beginning, and make it worthy the claims of not only the people of California, but of those scattered over the great and rapidly-developing regions west of the Rocky Mountains, where the want of educational facilities is the prominent cause of so many of those who have acquired competencies going back to older communities to educate their children.

FROM THE OFFICIAL REPORTS

Of the Fifth Industrial Exhibition

Of the Mechanics' Institute, San Francisco, 1865.

[Now in Press—Mining and Scientific Press Book and Job Office.]

REPORT OF THE EXECUTIVE COMMITTEE.

To the Members of the Mechanics' Institute of the City of San Francisco.

GENTLEMEN:—The Executive Committee of the Fifth Industrial Exhibition of the Mechanics' Institute, in presenting their report of the details of the management, expenditures and receipts of the same, desire to congratulate you on the now prosperous condition of the Association, which presages increased usefulness in the future, and the consequent stimulating of industrial and mechanical pursuits among us until they attain a state of perfection, in all their departments, not to be excelled elsewhere. It is with no spirit of self-gratulation, or ordinary feelings of pride, that they have to announce to you that, from the success of the late Exhibition, the Institute is, for the first time in its history, free from indebtedness and with funds in its treasury.

In this connection a brief retrospect of the past is proper, and may not be uninteresting to many who have not been cognizant of the difficulties and trials which the Association so long labored under, and from which it has so triumphantly emerged.

The preliminary meeting for the forming of an organization was held by the mechanics of San Francisco at the office of the Tax-Collector, on the evening of the 11th day of December, 1854, and on the 6th day of March following, the Committee appointed at the preceding meeting reported a Constitution as the result of their labors, which was adopted. With varying fortune, but generally an adverse one, the Institute continued increasing its library and usefulness, until February, 1863, when it was found that, having held three Fairs, viz., in 1857, 1858, and 1860, the Institute was steadily tending to bankruptcy. At this time urgent appeals were made through the public press for support from those engaged in mechanical and other pursuits. These appeals met with a generous response, so that, in October of the same year, the officers of the Institute were enabled to welcome the other members to the opening of the building in California Street, which at the present time is occupied by the Association. A large debt was still due on the building, mainly consisting of two mortgages: the first of $6,000, with a number of years to pay it in; and a second for $2,500, due on the 8th of February following. About the latter period the Institute was in high favor with the business public of San Francisco on account of its action in regard to the currency question, and its wants becoming known, the amount required to pay off the second mortgage was donated, and the same paid at maturity. At the close of 1863, it was determined by the Institute to give a course of lectures, Professors Brewer and Whitney, of the State Geological Survey, and the Rev. Thomas Starr King, kindly volunteering to deliver the same without charge. From these lectures the sum of $1,000 was realized.

A large debt still hanging over the Institute, in the spring of 1864 it was decided to hold an Industrial Exhibition in September following, from the proceeds of which it was hoped to be able to relieve the Institute from all pecuniary embarrassment. By the kindness of the Board of Supervisors a privilege was granted to the Institute, allowing it the use of Union Square to erect the necessary buildings for the holding of the proposed Fair. Through the confidence and liberality of members, and others, sufficient funds were advanced, on the security of the receipts of the proposed Fair, to erect suitable buildings for the purpose.

The Fair of 1864 was a great financial success, the receipts more than equaling all expenditures, leaving the buildings the property of the Institute, besides clearing off considerable floating indebtedness. The Board of Supervisors kindly extending the time for occupying the square for another year, and the mortgage of $6,000 being still due on the California Street property, besides some floating indebtedness, it was resolved by the Institute to hold another Fair in August, 1865, to liquidate the same, if possible, and the present Board of Officers were instructed to carry out the proposed plan.

The management of the Fair of 1865 entered on their duties under peculiar circumstances, the general feeling of exhibitors and the public, at the first announcement of the intention, being quite adverse to the same. The buildings of the Fair of 1864, however, having been left by the preceding Board, encouraged your Committee to persevere, while better counsels prevailed among exhibitors, so that, on the opening of the Fair on the day proposed (10th of August), a most creditable exhibition, for a first night, was made. The public appreciating the endeavors of the Executive Committee, ensured the success of the Fair, which also encouraged exhibitors, so that the display, in number, value, and variety of entries, fully equalled any of its predecessors, while in a financial point of view, the result, as above stated, liquidated all indebtedness of the Institute, both bonded and floating, and, at the date of this report, leaves a balance to the credit side of the management of the late Fair of about $10,000.

For items of receipts and expenditures the Committee refer you to the detailed account, as per Treasurer's report annexed.

In conclusion, the Committee deem it a fitting opportunity to return the thanks of the Institute to the Press for many favors received, and to the Public at large, whose generous patronage has stimulated enterprise, and enabled the Committee to present so favorable a report.

Towards the close of the Fair your Committee donated the receipts of five consecutive nights to the following named Charitable Societies, viz., Roman Catholic Orphan Asylum, Protestant Orphan Asylum, St. Vincent de Paul Society, Ladies' Protection and Relief Society, and the Home of the Inebriate, besides giving five nights' rent and half of the receipts from the Colfax address to the Ladies' Seamans' Friend Society.

TREASURER'S REPORT.

To the Chairman and Members of the Executive Committee of the Mechanics' Institute of the City of San Francisco, for the Industrial Exhibition of 1865:

GENTLEMEN:—I beg leave to lay before you the following Report of the Receipts and Disbursements of the Fifth Industrial Exhibition of the Institute, just brought to a close under your supervision; also, a Ticket Report, showing the number of tickets of each class sold, and the names of the persons who kindly consented to aid in selling the same. As a matter of record, I thought it proper to give, parenthetically, the receipts at the door of the Pavilion on the days given to charitable associations, each of whom realized considerable by the sale of tickets otherwise. I will also state that, in accordance with your instructions, the rent of the New England Kitchen was not collected on said days, nor for the twenty-first day of the Exhibition, which, together with $61.55 on the afternoon of the Colfax oration, was equivalent to a donation to that institution of $361.55.

I have the honor to be, gentlemen, your obedient servant,

EDW'D NUNAN, Treasurer.

Synopsis

Of the Receipts and Disbursements of the Industrial Exhibition of 1865, as carried out in detail in the following pages:

RECEIPTS.

To amount received as Loans to Exhibition Fund, as per account folio	$ 3,400 00
" " for tickets, as per account folio	26,240 50
" " for privileges, as per account folio	2,373 05
" " for sundries, as per account folio	3,441 70
	$35,455 25

DISBURSEMENTS.

By cash paid Loans, as per account folio	$ 3,400 00
" " Building Expense, as per account folio	3,309 86
" " Running Expense and Sundries, as per account folio	12,081 57
By amount transferred to Treasury of the Institute	14,000 00
	$32,791 43

Loans.

Received from (and returned to) the following persons as Loans to the Exhibition Fund:

C. Reis	$250 00
Blyth & Wetherbee	250 00
California Steam Navigation Company	250 00
North Beach and Mission Railroad Company	300 00
Central Railroad Company	300 00
San Francisco and Oakland Railroad Company	200 00
S. M. Sargent	100 00
Goddard & Co	200 00
Thomas Day	200 00
William B. Cook	200 00
Crane & Brigham	200 00
R. B. Woodward	200 00
F. E. Weygant	100 00
William T. Coleman	200 00
Meeker, James & Co	150 00
Howland, Angell & King	200 00
Vulcan Iron Works Company	100 00
	$3,400 00

Over $10,000 was subscribed to this Fund, but the above amount was all that was considered necessary to be collected. There was no difficulty whatever experienced in obtaining loans, and it is worthy of note that Wm. C. Ralston, of the Bank of California, consented to have an account opened with that Bank as early as the 1st of June, on the assumption of deposits, when realized, not limiting the amount to be drawn.

CASH DR. TO SUNDRIES.

To amount received from Mallon & Co., for Glass	$ 20 00
" " " Mr. Higgins, for Zinc	2 00
" " " Benefits, to pay their Current Expenses	525 00
" " " S. F. Insurance Co., returned Premium on Policy of Insurance	84 00
" " " Home " " " " " "	54 00
" " " Fireman's Fund " " " "	45 00
" " " Union Insurance Co., " " " "	34 10
" " " Proceeds of Sale of Pavilion	1,781 00
" " " Proceeds of Sale of Chairs	125 55
" " " P. O'Brien, for Gas Pipe	700 00
" " " D. Dwyer, for Gas Pipe	4 80
" " " J. H. O'Brien, for Chandeliers	75 00
" " " W. W. Hanscom, for Fire Wood	11 25
	$3,441 70

There still remains on hand all the water pipe, valued at $800; stop-cocks, valued at $50; and all the gas burners and reflectors, which, in the event of another Fair, will be found very valuable.

CASH DR. TO PRIVILEGES.

To amount received for rent of New England Kitchen (received daily)	$1,050 00
" " from A. Whitney, Soda Fountain, 20 per cent. on gross amount	94 85
" " " W. Frink, " " " "	63 45
" " " A. Schuman, Cigar Stand	85 00
" " " Dewey & Co., Printing Privileges, 25 per cent. of net profits	150 00
" " " Swain & Brown, 20 per cent. on Restaurant receipts	629 95
" " " Card Writer, six days (privilege withdrawn)	15 00
" " " J. Halstead, Cider Privilege	100 00
" " " John Dean " "	100 00
" " " E. W. Walton " "	100 00
	$2,373 05

The returns of the Restaurant are from the Receiver placed there by the Executive Committee during the Fair.

Total received for Admission	$26,240 50

DOOR RECEIPTS

Each day during the Exhibition, commencing August 10th:

1st day	$ 2,310 00
2d day	1,538 20
3d day	1,779 50
4th day	1,494 15
5th day	1,224 50
6th day	1,100 75
7th day	929 75
8th day	978 50
9th day	1,556 80
10th day	749 20
11th day	883 00
12th day	860 05
13th day	718 25
14th day	585 75
15th day	1,154 00
16th day	461 25
17th day	475 50
18th day	572 00
19th day	519 75
20th day	681 50
21st day	1,199 50
22d day, Benefit of Catholic Orphan Asylum	565 85
23d day, Benefit of Protestant Orphan Asylum	573 20
24th day, Benefit of the Ladies' Protection and Relief Society	291 95
25th day, Benefit of St. Vincent DePaul Society	555 05
26th day, Benefit of Home of Inebriate	436 54
27th day	839 40
	$22,808 20

The above daily receipts include the amount received for Season Tickets sold at the door.

Building Expense Account.

Including Tables and Woodwork Connected with Machinery:

Addition	To amount paid Pickering & Harvey for Add'n to Building		$1,180 00
Carpenters	To amount paid William Goudy, labor	$172 00	
"	" E. S. King, labor	08 00	
"	" M. V. Wiggins, labor	156 00	
"	" Christopher Toole, labor	114 00	
"	" L. L. Worcester, labor	96 00	
"	" J. B. Leavett, labor	57 00—	633 00
Drilling	To amount paid Murphy, Grant & Co		146 84
Gas Pipe & Fixtures	To amount paid Thomas Day, for pipe	58 83	
"	" J. K. Prior, for pipe	24 98	
"	" J. W. Brittan, for pipe and fittings	30 39	
"	" J. H. O'Brien, for chandeliers & fixtures	325 00	
"	" Johnston & Reay, mat'ls for reflect's, etc.	65 42	
"	" H. Maddern, gas fitter	306 00	
"	" Thomas Flarrity, helper	160 50	
"	" McGill & Co., columns for chandeliers	54 90—	1,024 00
Glass	To amount paid Mallon & Co., for glazing		3 00
Hardware	To amount paid Conroy & O'Connor, hardware	69 00	
"	" Underhill & Co., hardware	9 00	
"	" W. H. Eastman, hardware	13 00—	91 00
Lumber	To amount paid Johnston & Co., lumber	113 00	
"	" Wetherbee & Co., lumber	116 32—	229 32
Mouldings	To amount paid McGill & Co., mouldings		18 70
Zinc Work	To amount paid H. G. & E. S. Fisk, for zinc work		4 00
			$3,309 86

Sundries, and Running Expense Account.

Paper	To amount paid Reed & Co., for paper, etc	69 10	
"	" S. P. Taylor & Co., for paper	3 00—	72 10
Paperhangings	To amount paid G. W. Clark, for paperhangings		15 00
Refreshments	To amount paid Swain & Brown, refreshments	170 00	
"	" F. C. Belden, "	163 00	
"	" H. M. Lund	10 00—	343 00
Stationery	To amount paid Jos. A. Carrie, stationery		11 62
"	" Blank book, etc., for Treasurer		2 50
Stamps	To amount paid for check stamps, U. S. currency		2 00
Safe	To amount paid Russell & Irwin Manufacturing Co., cartage and repairs to safe		15 00
Sash	To amount paid B. & J. S. Doe, loan of sash for Show case		9 50
Soap	To amount paid Standard Soap Co., for soap used by washing machine		7 00
Sundries	To amount paid C. M. Plum, for sundries		7 08
"	" J. L. Burkee, for use of settees in picture galleries		30 00
"	" Weller & Jacobie, for muslin		5 25
"	" P. F. Loughran, for matting		39 00
"	" Underhill & Co., for use of furniture		10 00
"	" Armes & Ballam, for brooms		6 50
"	" Stanyan & Co., removing rubbish		7 50
"	" Goodwin & Co., for mattress		3 00
"	" S. Johnson, night work		10 00
"	" E. Spear, to cartage on shields		2 00
"	" R. A. Swain, for use of crockery		12 50
"	" H. T. Graves, for wire cloth		1 00
Reports	To amount paid H. D. Dunn, for compiling and preparing reports	250 00	
"	" A. Snow, for assistance in preparing awards for publication	25 00—	275 00
Remov'g Gas Pipe	To amount paid H. Maddern, labor, removing gas pipe	21 00	
"	" Thos. Flarrity " "	26 50	
"	" J. I. Collins " "	19 15	
"	" E. E. Collin, " "	6 00—	72 65
"	" R. & J. Morton, hauling gas pipe, chairs, etc., from Pavilion		18 50
Water	To amount paid Spring Valley Water Co., for water		200 00
			$12,091 51

ON STEAM ENGINES AND MACHINERY.

Committee:

CHARLES C. BEMIS. HENRY S. SMITH. THOMAS WINSHIP.

The importance of steam power, and the uses of labor-saving machinery throughout the industrial world, are too well known at this day to require comment. In the case of California and the Pacific slope of the United States, the use of steam power has played so important a part in developing the resources of the country that it stands pre-eminent among the favoring causes that have led to our present stato of prosperity, and promise of future greatness. Isolated from, and, as it were, lost to the influences of the great manufacturing enterprises which have made the nations that possessed them powerful beyond all others, the prosperity of the Pacific slope of the United States, in the absence of machinery and steam motive power, would have languished for many decades of years before attaining to its present greatness.

The high price of skilled labor, the difficulty of obtaining regular supplies of matcrials for manufacture, with great and injurious fluctuations in value, and the excessive rates of interest for money, all combined to deter and prevent the investment of capital in the home-manufacturing of machinery for the uses of the peoplo Fortunately, under all these discouragements, the wants of the country were so imperative for mining machinery that could only he made under the direction of operators in the vicinity of where it was needed, that foundries and machine shops had to be erected. These, once established, machinery for other than mining purposes was called for, and the diffcrent specimens exhibited in the Fair afford good evidence of our ability to furnish all machinery that the demands of our people require.

Steam Engine from the Union Iron Works, San Francisco, H. J. Booth & Co., proprietors.—This Stationary Steam Engine furnished nearly all tho motive power for the various machines in operation at the Exhibition, and was built hy the exhibitors. It is beautifully finished, and is judiciously and elegantly proportioned in all its parts. It works smoothly and steadily, and challenges tho admiration of all.

We would here remark that the steam engine of the present day is necessarily somewhat more complex than that of an earlier period, on account of the nicer adjustments of speed, and the rigid economy of fuel required to meet the demands of manufacturing, and the closest competition in all branches of industry. In the march of improvement these demands have sometimes heen met hy giving to certain vital parts of the machine merely an improved form, which embodied, in a high degree, the laws applicable to the particular requirement. This expedient, however, is not available in all cases, but the addition of new and delicately-working parts is required, without the aid of which the fullest economy of power cannot be obtained. Each avenue of loss has also to be carefully guarded, and, in all cases, the greatest simplicity of parts secured, compatible with the functions to be performed. The engine on exhibition has a cylinder fourteen inches in diameter and thirty inches stroke. The builders seem to have been fully aware of the importance of perfecting the details of the machine, as well as caring for its more general proportions, in order to secure that continued well-working and uniform rate of economy necessary to give character to their manufacture. This engine is provided with Scott & Eckhart's Variable Expansion Valves, the speed of the engine being regulated by the valves closing their ports variably from the commencement of the stroke to the point of loss in valve, the change of speed being attained by an attachment to the governor. This arrangement of expansion works noiselessly and effectually, the engine heing entirely under the control of the *governor*. Awarded a gold medal.

Mining Summary.

The recent cold weather has been quite detrimental to the mining interests generally. In the placer mines the ditches in the more elevated portions of the mountains, have been very much impeded in their flow by reason of ice, and avalanches of snow and earth. During the freezing weather the amalgamating process, in placer mining, is seriously interfered with, so much so as to cause a notable loss of gold. Very few hydraulic claims in Nevada county have been worked much since the severe cold has set in. In quartz mills, where no steam is employed, the same class of troubles are met with. We append our usual summary for the week.

CALIFORNIA.

ALPINE COUNTY.—The Illinois-California company, says the Monitor *Gazette*, have commenced their new tunnel, which will cut a number of fine ledges, and fairly test the district. The General Grant company are also driving their tunnel night and day. It is now in 125 feet, and in its course will cut three of the best lodes in the district.

The same paper says that the new shaft of the Morning Star is now down 98 feet, well timbered with 4-inch plank. It is thought that forty feet more will connect it with the tunnel. The company is earnest in the desire to see the ledge in another level.

Since the departure of the defaulting superintendent of the I. X. L., the mine has been placed under the charge of Mr. C. Nelson, who has been busily engaged in putting the same into a safe condition for future working. It is said to have been badly managed of late, but will soon be all right again.

The Mountain Tunnel, in Silver Mountain district, is now in over 620 feet, and running day and night. Their new engine supplies abundance of pure air to the workmen. The regular annual meeting of this company takes place January 1st. The Pennsylvania continue work, making good headway with unusually fine prospects. The Buckeye No. 1 are pushing their shaft down very rapidly. They have had five tons of their ore worked as an additional test; the "clean-up" from which had not been announced at the latest date, but which, it was supposed, would reach something like $80 per ton. Quartz taken from a spur of Buckeye No. 2, recently run through, shows rich in ruby silver. Work is also going ahead on the Lady Franklin and George Washington.

NEVADA.—The *Gazette* says that Eureka township presents an extensive and comparatively new field for quartz prospecting. The ledges in that section are large and easily traced, but have never been opened or prospected systematically. They all contain more or less gold, and occasionally rich pockets have been found, from which large sums were taken. Messrs. Kirby and Ryan have recently discovered a rich quartz ledge, on Little Cañon Creek, near Eureka. The rock is mostly decomposed, and the ledge is supposed to be one of the richest ever discovered in the country.

The new cement mill of Hagadorn & Co., on Hunt's Hill, was completed and set in motion on Monday last. It is run by a "hurdy-gurdy" wheel, which is attached directly to the cam-shaft, thus doing away with all intermediate gearing and consequent excess of friction.

The Illinois quartz lead, located on Deer Creek, has been purchased by a San Francisco company, and a contract has been let for running a large-sized tunnel four hundred feet from Big Deer Creek to strike the ledge. The work will be under the supervision of Mr. T. Coignet, the mining engineer at the French mill. The Illinois ledge is said to be excellent, and will, no doubt, prove a profitable investment for the company.

[From a personal experience on that lead of some two years' duration, we can fully attest to the truth of the richness of this lead.]

A very promising quartz ledge has lately been discovered on Deer Creek, a short distance from this side of the Lecompton. The ledge is larger—being about seven feet in thickness—and the rock shows much free gold. The owners are busily engaged in opening it.

The owners of the Cornish mill, on Deer Creek, have struck the lead rich on their ground. They have a ledge two and a half feet thick, with three hundred feet backs. It is estimated that from this level they can take out between twenty and thirty thousand tons of rock.

I. R. Poole has struck a rich gravel lead in Wood's Ravine, running back into the hill, which it is thought will pay largely.

The work on the Union mine, under charge of Mr. Leeds, is being carried on systematically—the "dead-work," such as sinking the incline, running levels, chutes, etc., being kept well ahead—and it will soon be yielding larger quantities of ore. The change in the dip of this lode, which we spoke of some time since, was a mere local variation. It has now resumed its original dip.

The *Gazette* speaks of a shipment of 114 sacks of copper ore, weighing 150 pounds each, from the Newtown mine, in Nevada county, which was recently made from Sacramento.

The Allison Ranch proprietors, says the Grass Valley *National*, never report the products of their remarkable mine; but we learn by outsiders, who know, that the mine is paying more than ever. The rock which they are now taking out will pay from $900 to $1,000 to the ton.

The *Union* records a valuable strike on Payne's ranch, in a mine recently purchased by Messrs. George Hearst of this city, and Samuel Curtis, superintendent of the Savage mine, Virginia City. Mr. Hunt has since become associated with Mr. Hearst. The *Union* thinks the mine could not now be purchased for $150,000.

The Excelsior District.—Late reports from Summit City state that the California Company have their mill running day and night. As yet they have not cleaned up, but will in a short time. Winton's mill is nearly completed, and it will be running in a few days. There are a few mines still being worked, regardless of the storms which are quite frequent in that section at this season of the year.

The Virginia *Enterprise* gives the following list of assays from several different lodes in this district. The correctness of the assays is amply vouched for: From the Indian Boy, per ton, in Grass Valley, $67.63; Knickerbocker, do. do., $66.01; Dictator, do. do., $90; Oriental, do. do., $63; Good Hope, do. do., $59.35¾; Last Chance, do. do., $69.28¼; Pacific, do., Gold Hill, $172.32.

SHASTA.—The *Courier* gives the following accounts of the prosperity of the mines in that county:

The Highland mill has just cleaned up a half month's run on second-class rock. The result is a bar, amounting to $4,421.

The Washington company has just cleaned up a twelve days' run with ten stamps. Results, after melting and assay, $1,797.

The Live Oak company are taking out surprisingly rich rock. Other lodes have been discovered in the vicinity, and we learn that there is already some dispute about title to ground.

The Knickerhocker is progressing with splendid prospects. They had to quit work during the late storm, but have since again commenced going down. We were assured by one of the company, last Tuesday, that the rock prospects from eight to ten cents to the pound.

YUBA.—Late discoveries of quartz in and around Dogtown have raised quite an excitement, and capitalists of San Francisco are taking much interest in them. One ledge sold to a party in San Francisco for a good round sum recently. Within the past few days new ledges have been discovered, and rock assayed yielding from $18 to $44 per ton.

In Brown's Valley the late heavy rains have caused the Jefferson Company a great deal of trouble and expense. They had about seventy feet of water in their incline shaft, and their pumping arrangements not being adequate to so large a volume of water, they lost nearly three weeks in getting rid of it. To avoid a similar loss of time the Jefferson and Pennsylvania companies will use in future two instead of one pump in each of their inclines. The Donnebroge company have struck rather richer quartz than ever. The Yuba company are putting up new machinery.

CALAVERAS.—A correspondent of the Calaveras *Chronicle* says that a company of twelve miners have associated themselves together, under the name of the Union company, for the purpose of working the old Meyer & Benachmin mine, situated about one quarter of a mile from West Point. This mine was worked a number of years since, and paid well, but like many others was abandoned on account of the interference of water. The "Union Company" design working it on a large scale, and will put on a steam engine and pumps to drain it.

The last crushing made by Cummings & Hadler yielded twenty-three hundred dollars from eighteen tons of rock.

Gamble & Co.'s mine contains richer rock than any other in the district, and the lucky owners expect to realize a large fortune from it.

Barnes & Cassner have out an immense amount of rock at their mine near Skull Flat, and will commence running their mill in a few days.

The Eagle company, operating near the North Fork, have just completed a new ditch to conduct water to their mill, and their superintendent, Mr. Pine, is now in San Francisco perfecting arrangements for working their mine on an extensive scale during the present winter. Hope & Eastin, last week, struck very rich rock in the Valentine mine.

The Kentucky mine, says the *Courier*, located in Salt Spring Valley, about five miles west of Copperopolis, looks more promising than at any former period. Work is going on night and day, and the superintendent entertains hopes of soon striking a rich deposit. A number of workmen on the Union mine have lately been discharged, on account of the impossibility of getting the ore to Stockton, and large quantities of ore are accumulating in the sheds of the company. The Keystone is yielding largely. This mine adjoins the Union, and bids fair to equal it in richness if not in extent.

AMADOR.—After more than two years' labor, the owners of the Kendall copper mine, says the *Ledger*, have struck very rich ore, and in abundance. This mine is located on the Newton range, about one mile north of the works of the Newton company. The shaft has been sunk to the depth of one hundred and forty feet, at which distance they struck a vein of No. 1 ore, eight feet in width, and the specimens exhibited to us, which are an average, will yield at least twenty per cent. We congratulate the company on their success, for they richly deserve it for their perseverance.

TUOLUMNE.—Some two months since, a lead was discovered about four miles from Sonora, in the vicinity of Yankee Hill, which has turned out to be very rich. The Sonora *Herald* is informed that two or three weeks ago the owners refused $12,000 for it. There are also several other claims in the neighborhood which are far exceeding in richness the expectations of their owners.

TULARE.—Ex-Governor Wm. Bigler has made a purchase of 36 veins of De la Borde & Goguelat, at Clear Creek, for an Eastern company, for the very small sum of $75,000. In the purchase is included the Rhons, Lyon and Rochfort—all of them, says the Visalia *Delta*, rich paying lodes.

Millerton has taken a new start since the late rains, and every gulch and cañon where the color can be had, is being dug, and panned and washed thoroughly. It is surprising what a quantity of the precious metals, these numerous diggings accumulate. None of them are exceedingly rich, yet they all pay, at least in a small way, and the aggregate yield is such as to keep every class of business in a healthy condition. Steps are being taken here to convince men of capital at San Francisco that this is the route for a road to Owen's River. Mr. Stello and other men of influence, are, or have been down upon this important mission, and we all hope they will succeed, as to distance from San Francisco we have largely the advantage of Visalia, while you have the advantage as to altitude of route, yours being the lowest.

VIRGINIA CITY AND VICINITY.

Late advices speak very encouragingly of the ore in the lower levels of the Savage. It is understood that no more assessments are to be levied, and that the debts will be paid off by March next, if not before. The mine is now producing 200 tons of ore per day—more than any other mine on the Comstock.

Nearly 1,000 tons of ore are being raised weekly from the Yellow Jacket mine, yielding an average of from $29 to $30 per ton.

During the month of November 1,060 tons of ore were raised and crushed from the Crown Point mine.

During the week ending December 1st, 249 tons of ore were sent by the Chollar-Potosi to custom mills, 56½ tons first-class were sacked, 29½ tons were sold at $10 per ton, 56 at $6, and 393 at $5 per ton.

Both the lower and upper slopes of the Bajazette ground are said to look well, showing from four to five months' supply of ore in sight. Between the third and fourth stations of the old works in the Chollar, a seam of good ore has been met with on the east side.

The Empire Company's two mills are now reducing daily some fifty-six tons of ore and tailings, the former being mainly taken from the new deposit found in the upper part of the mine.

The Imperial's receipts of bullion last month amounted to some $75,000, but were not deemed sufficient to warrant the payment of a dividend.

The United States Mining company are clearing out their tunnel, and re-timbering where necessary. The tunnel is 2,000 feet in length. At about 1,200 feet from the mouth the ledge is visible, with a pay streak of two feet in width. It has the well-known Comstock "indication" of a blue clay casing for the east wall. A double shaft is sunk, some seventy-five feet east of the ledge, a distance of ninety feet. Mr. Marston expects to strike the ledge in the shaft by sinking from ten to twenty feet further.

Outside Districts.—Checks to the amount of $35,000 in greenbacks were received at Virginia City on the 7th instant, in payment to parties who were owners in the La Plata, Pioneer, and Silver-Wave ledges, located in Mountain Wells District, from a New York corporation, who, a short time since, purchased the larger part of these ledges. A mill upon them is now being built, which will cost, when finished, upwards of $100,000. Over 300 tons of rock have been taken out of these claims for crushing in this mill. From a party who has seen this ore, we are assured that it will work well by mill process. The yield will be principally in silver. In a short time a remittance of another $35,000 is expected by those interested in these mines. The entire contract for the sale of these mines amounts to $220,000. Mr. Underwood, the general superintendent of the works, has arrived in Virginia, to take charge of its affairs.

Six hundred ounces of bullion were recently received as returns from the Jersey ledge, Aetna district. The mines there are being worked with good success—the rock yielding good returns. Three mills are at work there at present, the Nevada, 10-stamps, built by a New York Company, under the superintendence of Charles H. Tompkins, now crushing rock from the Montana ledge, costing upwards of $40,000. The Webber Mill, of 5-stamps, with facilities for five more, at work on Montezuma rock, yielding very rich returns. The Chrysopolis Mill, working from a mine of the same name; this mill, is of the style called the "Alligator Crusher;" and is as yet an experiment. A fair trial will be given it, to test its practicability. The miners of the district are very much elated at their future prospects, and we think with good reason, as the rock looks well, and the returns are such as will warrant them in their belief.

The Gold Hill *News*, in speaking of districts outside of the Comstock, uses the following language: "Among the many mining districts outside of the Comstock, awaiting the aid of capital, are several on the mineral belt from Virginia City to Aurora." The same paper then speaks in high terms of the Eagle and the Genesee districts, of Douglas county. It is true that on a line from the Gould & Curry, Ophir and other rich mines of Virginia, travelling south to Aurora, and the rich ledges of Bodie, some exceedingly rich mines have been opened in the interval. The Independent and Anglo Saxon mines, both in the Genesee district, have been opened, and show fine rock; it has assayed as high as $400 to $600 per ton, and, worked by mill process, from $40 to $350. Wood and water are plenty here, and rock can be gotten out and worked in the mill for $5 75. The day is coming when the rich Comstock vein will be traced from the rich mines at Virginia and Gold Hill down south through Douglas county, by Aurora, Bodie and Montgomery, on to the rich mines of Mexico that have been worked for three centuries and have yielded thousands of millions of dollars. But capital must take hold and aid the hardy discoverer. Our friends in the East must be brought to our aid, or much of the wealth of this coast will be lost to us and them.

IDAHO.

The *Avalanche*, published at Ruby City, near by the famous Poor Man's claim, which late reports have claimed to be so fabulously rich, has come into possession of facts which the editor thinks are reliable, and which go far to establish the extraordinary richness claimed for this quartz lode. One lot of ninety-five tons gave $2,200 per ton; and another lot of sixteen tons gave a much larger yield—the exact result our informant could not give. One hundred and eleven tons gave an average of over $2,200 per ton. Admitting the above quantity of rock (in tons) was crushed and yielded an average of $2,200 per ton—the lowest sum reported—and the snug little matter of $488,400 was realized. Private letters recently received in this city also confirm substantially the reports heretofore published.

The tin ledge recently discovered has been named "Cornwall." The ledge lies between Jordan creek and Saw Pit gulch. Mr. Vass has made three tests in new crucibles, and each trial resulted in a quantity of metal which he confidently pronounces tin. Mr. Coleman and Mr. Dalton each carried samples of the ore to New York for perfect tests. The ledge is large and the owners believe they have a big thing.

The Portland *Oregonian* says that next spring there will be fifteen quartz mills in operation at Owyhee, from which large returns may be expected another year.

THE MINES OF UTAH.—The Salt Lake *Vedette* says that two (one a blast and the other a reverberatory) furnaces are now running at Stockton, thirty-eight miles from Salt Lake City, with good results. The argentiferous galena that is being worked yields 30 per cent. of bullion, and the bullion sixteen hundred dollars per ton, in gold and silver. All we require, says the *Vedette*, is capital and practical workmen, to demonstrate that the Utah mines are the most profitable in the world.

Mechanical.

A NEW HAY AND COTTON PRESS.

Mr. B. F. Dunning, nf Gulesburg, Ill., hns recently invented and patented a powerful press, designed for packing hay, cntton, etc., which is attracting considerable attention among mechunics and all interested in the production of hulky articles requiring great compression in preparing thom for transportation. The machine is known ns "The Americnn Telegraph Hay and Cottnn Packer." It is described as a long frame, with hny boxes nt each end, into which the hay or cotton is fed by two long rollers arranged above each other, and moving up and down in reverse direction, eo as to drnw the materinl through between tho rollers, forming continuous nnd regulur sheets. In the centre of the press is a wedge, which is raised by horso-power to the proper hight, when it drops on friction rollers applied to followers bearing directly on the volume of hay in ench box of the machine, pressing it horizontnlly by the combined powers of the incline plano and falling weight—the two most powerful agencies known in mechnniem. A working model of the iuvention wns recently subjected to a prnctical test, at the store of Greenbaum & Co., on Randolph street, Chicago, where a large number of ecientific nnd prnctical gentlemen were present, by invitntion, tn witness its opcration. All present united in pronouncing it one of the most effective and nseful machines of the kind ever introduced to the public. The hay pressed by it, nn being sawed asunder, presents faces nlmost as solid and emooth as wood. The machine is exceedingly simple in ite construction and operation, and is cupnble of turning out half a ton of hny ineide of six minutes.

It is claimed for Mr. Dunning that he has been successful in eolving the problem of bringing the falling wedge into mechanical nse in a proper manner, and on a principle which cannot fail to prove eminently useful in other classee of machinery. One great advantage claimed for it is the fact that it can be readily set up anywhere, without the aid of expeneive framework, like most other presses in use. We nnderstand the press will soon be introduced into California.

A Bread Cutting Machine.—Mr. Thomas Schofield, an ingenious mechanic of Sacramento, exhibited to us, a few days since, a conveuient and ingenious machine for cutting brend. The frame work of the machine consists of two standards properly supported, and constructed of boards about ten iuches broad, divided longitudinally, from the top to near the bottom into slats, the thickness at which it is desired to ent the slices. The loaf is introduced between these standards, supported on a frame work, and held firmly in place. A set of knife-bladee, similar to the ordinary butcher's saw-blade, is secured in a frame, at such distances apart, that each blade will pass between two of the aforesaid slats. By drnwing this frame back and forth, as if cutting witb a single knife, each of these blades ie made to pass through the loaf simultaneously; thus cutting up the entire loaf in about the same time that is ordinnrily occupied in cutting a single slice. Of course, there must be as many blades as it is necessary to make cuts in the loaf. The machine ie exceedingly simple, cheap, and effective, and its use must save a large amount of labor in large hotels, restaurants, etc. The inventor will vieit the different hotels and restaurants in the city, for the purpose of exhibiting the machine and its work, with the view of introducing it into use. A patent for the same has beeu applied for.

A Foundry for Austin. — Austin, Recse River, is to have a foundry. The building for the same has already been erected and the necessary machinery, including a small steam engine.

A Large Pump.—At the Brooklyn Navy Yard they have an engine to pump the water out of the dry dock, which throws 1,000 gullons at each etroke, and it makes 12 strokes a minute.

An Important Invention.—Our nttention has been called to an invention, recently made in this city, of a preparation for preserving wood, by a simple process of injection, whereby it is claimed that it is cheaply rendered almost imperishable, and so hard as, in many enses, to make it serviceable in place of iron. When prepured after this process it is thought by the inventor that it may even be employed for railroad tracks, and that it will resist abrasion fully as long as iron so used. We understand that experiments are still in progress for testing the valne of the invention, of which we shall speak further and more particularly at an early day.

A Spiral Railroad.—Quite an important mechanical feat is in progrees of accomplishment nt tbo great iron ore mountain, in Cornwall, Eng. This work consists of a spiral road which starts from the level of the Cornwall railroad, nnd revolves around the mountain, being carried along, in many places by trnstlework, or heavy embankments, and sometimes through deep cuts made through the ponderous and solid bodies of iron ore, until it reaches the very top of the mountain. A powerful locomotive has been obtained to move the trains. The spiral portion of the road will be something over two miles in length. We have no information of the gradient to be overcome.

Iron and Steel Manufacture.—The value of iron and steel manufactures in this country is estimated for the year ending June 30, 1864, as follows:

Railroad	$21,429,225
Bar	27,171,459
Sheet and plate	9,235,260
Nails, spikes, etc.	10,445,550
Castings	25,491,100
Machine engines	2,181,140
Steel, and manufactures of	12,151,500
Miscellaneous iron manufactures	63.035 390
Total value of iron and steel	$180,140,615

On this aggregate value the direct tax actually paid wns $3,882,546. It is thought that the tax on income and the various taxes on coal and other adjuncts of the iron manufacture would at least double this sum. The census of 1860 enumerates thirty-six establishmente for the manufacture of bar, sheet, and railroad iron in the Middle States in 1860, with an invested capital of $2,037,850; the cost of raw material aunually is stated to have been $2,615,941; the number of male hands employed, 2,436; cost of labor, $835,656; and annunl valne of products, $6,868,700.

The Pocket Sewing Machine is the latest improvement in that line. This neat little instrument is now extensively advertised at the East. It is specially adapted to quilting, embroidering, and braiding. When used, it is held in the left hand, and moved along over the cloth, which must be confined in a frame. The machine is worked by the right hand, by means of a small crank. Instead of passing the cloth along the machine, as is done in the larger ones, this machine is passed aloug the cloth, thus reversing the order of work.

Be Happy at Your Work.—Give me the man who sings at his work! Be his occupation what it may, he is equal to any of those who follow the same pursuit in silent eullenness. He will do more in the same time—he will do it better—he will persevere longer. One is scarcely sensible of fatigue while he marches to music. The very stars are said to make harmony as they revolve in their spheres. Wondrous is the strength of cheerfulness—altogether past calculation its powers of endurance. Efforts to be permanently useful, must be uniformly joyous, a spirit all sunshine—graceful from very gladness—beautiful because bright.

Massachusetts.—It is doubtful if any other State in the Union has done so much for the cause of labor as has Massachusetts. It was there that the old system of "perpetual work and sleep" received its first check; it was there that the overtasked factory operatives received their first curtailment of the hours of labor, and it was there that the present eight-hour movement was inaugurated. The enthusiasm manifested by the leading men of the State upon the latter subject is quite characteristic. When the question of legalizing eight hours as a day's labor came before the Massachusetts Legislature, last winter, it received the earnest support of the ablest men in that body; and since that time many of the most eminent statesmen in that State have allied themselves with the movement.—*Va. Union.*

Scientific and Mechanical Facts.—The power derived from a pound of coal equals that from the decomposition of nine pounds of zinc in a galvanic battery.

Melted snow produces about one-eighth its bulk of water.

A locomotive driving-wheel, six feet in diameter, makes 280 turns in running a mile.

Britannia ware is an alloy of 85½ parts tin, 10½ antimony, 3 zinc, nnd 1 copper.

An nlloy nf 3 parts tin, 5 lead, nnd 8 bismuth, melts at less thun 212 degreee of heat, which is the temperature of boiling water.

In the manufacture of Whitworth's standard guages, the workmen meusure to the twenty-thousnndth part of an inch.

Spring steel is made in New Jersey, which bears 142,500 pouods per square inch, and an extension of 1-258th of its length, without permanent change, nfter the set of the first trial. This extensibility is less, but the strength is much greater than is elsewhere reported for steel of spring temper by reliable authorities.

At the mines of Traversella in Savoy, magnets revolving on a wheel are used to pick up the powdered ore, leaving the copper-pyrites behind.

The four armor-coated war ships, named by the London *Times* "Rams," are to have iron side-plntes four inches thick, which experiment has proved cupable of resisting shot. The vessels are to be 20 feet longer, and 15 feet broader than the Persia, and are intended to steam 14 knots.

The manufacturers of Troy have, by mixing different irons, produced one that will resist a tensile strain of 100,000 pounds per square inch of section, 60,000 pounds is considered about the average of good iron.

Pittsburgh Steel.—The correspondent of the Missouri *Democrat*, having visited the tool manufacturing works of William Sellers & Co., and the Baldwin locomotive works, in Philadelphia, writes thus on the subject of Pittsburgh steel: "While here (Sellers & Co.'s,) as well as at the Baldwin locomotive works, I made inquiry concerning the use of the Pittsburgh steel we saw in that city. The Baldwin's manager informed me that they used it, liked it, and thought it as good as the best English steel; and Sellers & Co., require the very highest standard. The very best superfioe is demanded for making machine tools, and young Mr. Sellers told me they used large quantities of Pittsburgh eteel, and liked it. They sometimes found fault with its uniformity, but not enough to give English steel a preference. This is the very highest sort of testimony, as the parties just named have no object in praising American steel, and merely speak of it as business men of practical experience."

A New Ladder.—An interesting trinl was made lately, in the spacious courtyard of the Archinto Palace, at Milan, with what the inventor, Paolo Porta, calls an "air ladder." It consists of several pieces, which, a sort of carriage as a basis, can be fixed one on top of another. A hight of 90 feet, was thus reached in a very few minutes. The apparatus may be bent down to an angle of 45°, and is capable of carrying heavy weighte. The principle, it is stated, can be adapted to portable bridges, which can be put together in an equally short time.

Nominal Horse-Power of High-Pressure Engines.—Multiply the square of the diameter of the cylinder in inches by the pressure on the piston in pounds per square inch, and by the speed of the piston in feet per minute, and divide the product by 120,000; the quotient is the power of the engine in nominal horse-power. If the pressure upon the piston be 80 lbs per square inch, the operation may be abbreviuted by multiplying the square of the diameter of the cylinder by the speed of the piston, and dividing by 1,500, which will give the same result.—*Bourne.*

A platinum wire of the 13th of an inch will suspend 274 pounds.

Lightning.—Fig trees and cedars are rarely struck by lightoing; the beech, fir, larch and chestnut are obnoxious to it; but the trees which ntract it most are the oak, yew, and Lombardy poplar, whence it follows that the latter are the trees most to be placed near a building, since they will serve as so many lightning rods. Again, the electric fluid attacks in preference such trees as are verging to decay by reason of age or disease.

Phosphate of lime nnd magnesia, in small quantities, are found in the ashes of all common plants; but they form from one-half to three-fourths of the ashes of wheat, and a very large portion of the ashes of other grains.

To Gild Steel.—Apply an etherial solution of Gold. This is equally adapted to lettering, as wholly covering the object. It may be applied with a pen, or otherwise.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

Office of the Mining and Scientific Press—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The first question that presents itself to the inventor, who desires to procnre a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention mentioned in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, no fee of the fifteen dollars or the twenty dollars is demanded. English, French, Austrian, Prussian Spanish, and Inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only exception to this rule made is as regards subjects of powers that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending all the business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we a cause thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patents properly prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions; it should be neatly made of hard wood or metal, or both, varnished or painted; the name of the ventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expresses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as rnpidly as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and return, with a power of attorney, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the Government fee, namely twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procnre a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of clients, the time is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every application for a patent, for seventeen years	15
On every caveat	10
On issuing each original patent	20
On filing a disclaimer	10
On every application for a reissue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

San Francisco:
Saturday Morning, Dec. 16, 1865.

A State Mining Convention.

Pursuant to the request of several mining journals and representative mining individuals, the association known as the "California Mining Bureau," of San Francisco, through their Board of Trustees, have issued the following call for a Mass Convention of the miners of California:

RESOLVED, That a Mass Convention of the miners of the State of California, be and is hereby called to assemble in the city of Sacramento, on WEDNESDAY, the 17th of January, A.D. 1866, at 12 o'clock, and that any person engaged in actual mining operations shall be eligible to a seat in said Convention.

JOSEPH W. LOW, Vice-President.
J. B. WHITCOMB, Recording Secretary.
San Francisco, December 6, 1865.

RICH SPECIMENS OF COPPER.—We have received from Messrs. Kepler & Mack, a small box of very rich specimens of copper ore, from a vein recently discovered in Mono county, near Mono lake. The ore consists of red oxide, sulphuret of copper, copper glance, and native copper, and is exceedingly rich. Notwithstanding the mine is located at such a great distance from a market, if ore anything near as rich as that sent can be obtained, it will pay to transport it to San Francisco; or if charcoal can be made reasonably cheap in the immediate vicinity of the mine, that character of ore may be very readily run into matte of a very high percentage of assay, which will greatly cheapen the cost of transportation. Our correspondents, who own one-half of the vein, inform us that they already have several tons out, as rich as the samples sent, and that preparations have been made to continue the work of development, already begun, through the winter. The vein is thus far from four to eight feet thick, and very favorably located for being worked. We shall be pleased to hear from them again as the work of development progresses.

HEAVY ITEM OF EXPENSE.—The Gold Hill *News* gives some interesting figures with reference to the cost of wood in running the mills and machinery at Washoe. It says that to run the mill of the Gould & Curry company, it requires thirty cords per day, and for the machinery of the company at the Bonner shaft, six cords, making thirty-six cords, or about 13,000 cords per year. It estimates the average cost to be $15, making a consumption by this company, of $200,000 worth of fuel in each year. Upon this basis it estimates the quantity of fuel consumed by the mines and mills around there, at 200,000 cords per annum, creating an expense of $3,000,000. The price of wood, as suggested, might be greatly reduced by the construction of a railroad to the Sierras, and we may add, by the completion of the proposed flume from Alpine to the Carson river.

MR. DONGE, the present manager of the Fremont Grant, is removing the machinery of the Mount Ophir works to Bear Valley, where it will be put in order for crushing rock from the Josephine mine.

IMPORTANT ADVANCE IN THE PRICE OF COPPER.

The troubles in Chile, as we predicted some weeks ago would be the case, have produced a most important advance in the price of copper. Telegraphic advices from London up to November 20th, report this advance to be $150 per ton since the first of October. Sales of copper were made in Liverpool, October 16th, at $396.88; one week later, October 23d, it was quoted at $416 24; on the 3d of November, our latest dates by mail, it was selling at $464.64. We have not the selling price at hand for November 20th; it was $150 advance, however, of the quotations of October 1st.

At latest New York dates, manufacturers at the Eastern States were buying more freely than for the previous two months, in anticipation of still further advances; but no stocks were accumulating. The market was firm with a rising tendency, with but little foreign copper in the market.

Previous to the late complications between Spain and Chile, copper had dropped to a very low standard, and the subsequent advances which have been caused by these troubles will meet with but comparatively small recession when the news reaches England of the late more peaceable complexion which political matters have assumed in that quarter. California will therefore reap a permanent benefit from these troubles, in the enhanced value of copper, which will be sensibly felt in the percentage price of her ores.

MINING CORPORATIONS.—We would call the special attention of our readers to an article on the "Past, Present and Future of our Mining Interests," which will be found on the second page of the present issue. We have not space to give the article entire this week; that portion relating to the savings which may be made in reduction and general management, will appear in our next. In the meantime we recommend for the serious consideration of all interested (and who in California is not either directly or indirectly interested therein), that portion of the communication of Prof. Rowlandson, which refers to the Constitution, By-laws and general management of incorporated mining companies. We do not understand that the Professor recommends the introduction of the Cost Book System as an entirety; but he gives the main features of it as affording reliable suggestions, which may be of service in arriving at the necessary legislative modifications of our present mining laws, which all admit to be a matter of the utmost importance, nay, of absolute necessity. Whether placing the general management of our mining companies directly into the hands of the stockholders at large, would be better than throwing proper safeguards around the action of Trustees, is a matter for careful consideration. The difficulties attending the latter course are apparent to all; and the possibility of obtaining intelligent action from a large mass of stockholders, who generally know next to nothing of what they are endeavoring to manage and direct, is also a matter for grave consideration. We trust such discussion will be had in the premises, through the public press and at the approaching Convention, as will lead to efficient, wise and practical legislation.

A PARTY of surveyors are marking out a road from Montana to the mouth of the Mussell Shell river, on the Missouri, and expect to obtain goods that way next summer. If our San Francisco merchants would take the matter seriously in hand, a communication could be opened up between this city and Montana, *via* the Colorado river, which might eventually be worth millions, annually, to the trade and mechanical industry of this city. Montana is destined to become one of the richest States in the Union.

MINING IN VIRGINIA.—There are two thousand miners at work in the gold mines at Goochland and Louis counties, Virginia. They make about a dollar and sixty cents a day, out of which must come their board and other expenses.

BANCROFT'S CATALOGUE OF SCIENTIFIC BOOKS. We have received a copy of Bancroft's Catalogue of scientific books for 1865. The entire collection represents 2,505 different works, varying from one to eighty-eight volumes each. The entire collection is divided into twenty-one groups, and those groups subdivided into seventy-three distinct classes. Much care and judgment has been displayed in methodically arranging and classifying this large collection of scientific publications. The work is so well done that the reader can turn to any department of science, to the extent of seventy-three classifications, for authors upon the subject in regard to which he may be seeking information, or for a book he may wish to purchase. This model catalogue has been arranged by Mr. W. H. Knight, the efficient manager of the subscription department of this extensive firm. This large collection of different works in the single department of science, may afford the reader some idea of the immense aggregate collection of books, which is to be found upon the shelves of Bancroft & Co.—a collection larger and more varied than can be found in any other bookstore on the continent. In making up the catalogue, great pains has been taken to convey, in the most concise manner, the fullest information consistent with such a compilation with regard to each work enumerated. The book is first named, by title, then follows the announcement of its illustrations with the number of maps or plates, if such there are; then the style of the volume, the character of its binding, number of volumes, place and date of publication, price, etc. This full reference renders the catalogue especially valuable to purchasers from a distance, who may wish to send for books; they will know just what to send for and the price and style of the work, etc.

A SOUTHERN PACIFIC RAILROAD.—Hon. T. G. Phelps, and others, filed articles of incorporation on the 2d inst., for a line of railroad to run from San Francisco to San Diego, thence to the eastern line of the State of California, there to connect with the road of another company, which will continue it onward to the lower Mississippi river. Capital, $30,000,000; line of route in this State 720 miles.

Active measures are also being taken to commence the construction of a northern railroad from the upper waters of the Missouri to the upper waters of the Columbia; the length of which will be much less than either of the other two. Each of these roads will doubtless be wanted within a few years, and each will add vastly to the development of the sections of country through which they may pass; but it is to be regretted that the efforts of capitalists and men of influence cannot be concentrated upon one road first, until that is completed. The undoubted success which would attend the construction of the first one opened, would greatly hasten the construction of each of the others.

LOOKING ABOUT.—The Nye County *News* says that Mr. J. E. Clayton, the geologist, accompanied by Col. Rust and Mr. George Clink, an English gentleman, recently made quite an extended tour through the Twin River mines. These gentlemen entertain a good opinion of the District, and design shortly returning to give it a more careful and complete inspection. Col. Rust has entered into negotiation for certain mines in Twin River, amongst the number being some of the best claims there, and may possibly contract for others, if he can procure them on terms to suit him. This gentleman has also made an examination of many ledges in the vicinity of Dayton, and will be very likely to make a purchase of some of them on account of parties at the East.

THE MONTANA MINES are attracting considerable attention at the present time. Persons who have visited them recently speak very highly of them, and there will, doubtless, be a very large emigration thither another season. Montana draws the chief part of her supplies from Chicago and other Eastern cities. A nearer and more direct communication might be opened up with San Francisco, *via* the Colorado.

THE MINING SHARE MARKET in this city has met with a noticeable decline during the past few weeks, which reached nearly all the leading stocks on the list. A slight improvement was noticed on Wednesday; but not sufficient to stay the panic which appears to have seized upon nearly all the dealers in the market. The most noticeable falling off was in the Alpha, which fell from $635@$640, our quotations of last week, to $135@$150 for this week. No reason whatever is assigned for this stampede, and probably no valid one exists. The receipts of treasure for the week have been $875,000, making an aggregate of $2,425,000 for the past fifteen days. The product of Nevada shows a slight falling off during the past thirty days; but this decline has been more than made up by increased receipts from the north coast, and from the interior of this State.

EARTHQUAKE AT SEA.—The bark Live Yankee, which arrived at Portland on the 13th inst., reports that when at sea, on the 26th of November, on her voyage from this city to Portland, she experienced the effect of an earthquake, which was sensibly felt, jarring the ship, and making the rigging tremble considerably for a moment.

ALLEGED ILLEGAL STOCK SALE.—Charles L. Stone has commenced suit in the Fourth District Court against the Mount Vernon Gold and Silver Mining Company, to compel the defendants to transfer 100 shares of stock to plaintiff, which were assigned to him by Silas L. Stone, Jr. The stock in question was sold for delinquent assessments and purchased by J. W. Mandeville, for the company, which sale plaintiff claims to be illegal.

MAMMOTH GOLD NUGGET.—The Salt Lake *Union Vidette* has been shown a gold nugget which weighs 178¾ ounces, or nearly thirteen pounds avoirdupois, and worth there, in greenbacks, $3,871.50. It was taken, a short time since, out of Snow Shoe Gulch, thirty miles from Helena, Montana Territory. It was purchased by Tutt & Donnell, merchants of Montana, who are sending it on to one of their firm at present in New York.

THE eastern end of the Pacific Railroad has been completed as far as Lawrence, Kansas, a distance of about 1,300 miles. There is now uninterrupted communication, by rail, between the capital of the nation and the capital of the youngest State but two in the Union. It is expected that by July the road will be extended as far as Fort Riley.

Two meteorologists, the brothers Blatter, have just taken up their residence for one year in a small building on the Teodola mountain, one of the Alps, at an elevation of eleven thousand three hundred and sixty-seven feet above the level of the sea, or three thousand three hundred feet higher than the St. Bernard, for the purpose of making meteorological observations.

OBSTRUCTIONS TO NAVIGATION.—The steamer Chrysopolis, on her way down the river, on Thursday last, grounded upon a newly formed sand bar, about two miles below Sacramento. When the steamer left Sacramento the river was twelve feet above low water mark, and the grounding, under such circumstances, shows that a rapid accumulation is going on in that river, which augurs badly for the future of its navigation.

TO CORRESPONDENTS.—"Gold-Bearing Sulphurets and their Reduction," by "A Student of Metallurgy," will appear next week. "The Age and Formation of Metal-Bearing Rocks," by "F. A. H.," is received and will appear. The proceedings of the "Mass Meeting of Miners at Summit City" will appear next week.

INSTITUTE BALL.—The ball given by the Mechanics' Institute, on Thursday evening, is generally conceded to have been a very pleasant party, about six hundred ladies and gentlemen being present.

GEN MCCLELLAN and family are now in Brussels.

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

SAN FRANCISCO, SATURDAY MORNING, December 16th, 1865.

There is a slight increase in the amount of capital offering for loan purposes, but the demand on such securities as the bankers are willing to accept is rather lighter than usual. Business requirements are moderate, and good mercantile paper is readily taken at 1¼@1½ ₱ cent. per month, with occasional transactions at lower rates. The serious depreciation in all mining stocks has nearly annihilated their availability as a collateral, but some loans are still made to parties in fair credit upon this description of security at 1½@2 ₱ cent. per month.

Receipts of treasure from domestic sources, since Saturday last, amounted to $875,000, making an aggregate of $2,425,000 since the 30th ult. The product of Nevada, during the past thirty days, shows a slight falling off; but this decline is more than made up by increased receipts from the North coast, and the interior of this State.

Bullion is in good supply, and the market for the steamer of next week has not yet opened. Gold bars have been taken to account this week by dealers at 840@850, and silver has ranged at par to ½ ₱ cent. premium, for bars of average fineness.

The mining share market experienced a fresh stampede early in the week, and with scarce an exception, every stock on the list declined seriously from the prices ruling last week. A slight rally took place in some stocks on Wednesday, and since then this improvement has been in some degree tolerably well maintained. A thorough fright seems to have seized upon nearly all dealers, and it is useless at this juncture to speculate upon the causes which have led to the present demoralization of the market, or to predict what the future may evoke.

City stocks, for the most part, are steady, but inactive, at quotations: Spring Valley Water has improved, and is inquired for at $56½ ex-dividend; California Steam Navigation steadily declined from $62 to $50, seller 30, then sold at $56, and closed at $55 bid. No dividend will be paid for the month of November.

Gould & Curry was dealt in to the extent of 62 feet, receding from $950 to $700, rallying to $830, and closing at $820. The annual reports of the officers of this company to be presented to the stockholders on Monday next, are likely, we think, to prove more satisfactory than is generally anticipated. The receipts from all sources during the year amounted to $2,395,000, including $82,000 for tailings sold. The company's mill produced $1,563,000 in bullion, and the yield of ores crushed at outside mills amounted to $749,901. The superintendent estimates the different bodies of ore in the upper levels at 30,000 tons, and worth at least $40@$45 per ton.

Savage has been active, and 247 feet were sold, advancing to $750, receding to $615, rallying to $700, and selling yesterday at $735@$740. Advices from this mine continue exceedingly favorable. For a week past 150 tons of ore have been hoisted to the surface daily, and different mills are reducing 130 tons per day. The ore from the large deposits found in the lower level will, it is thought, average $75 per ton. Receipts of bullion thus far the current month have exceeded $50,000.

Alpha has been dealt in within a range of $600, buyer 30, and 130 cash, closing at $135 asked. Yellow Jacket declined from $345 to $200, seller 30, rallied to $300, receded to $225, seller 30, and $250 cash, closing at $335, assessment delinquent. Within this range some 259 feet were sold. The bullion product of the mine last month exceeded $99,000, but owing to the disbursement of $31,694.24, for current expenses, the aggregate debt of the company was increased to $14,864.33, and amounted to $305,542.01 November 31st, less $120,000 to be derived from the present assessment.

Crown Point declined from $515 to $380, rallied to $440, and sold yesterday at $460@$455. During the week ending December 10th, 322 tons of ore were raised to the surface, 44 tons of which came from the east stratum of the 300-feet level. The different inclines from the 230-feet level are said to look well. The aggregate debt of this company now amounts to $70,000.

Ophir fell from $340 to $200, seller 30, rallied to $250, and was dealt in yesterday at $260@265. During the month of November 950 tons of ore were sent to the Woodworth Mill, and the average product of the mine is now some 30 tons per day. The indebtedness of the company is at present less than $50,000. The annual meeting takes place on the 20th instant.

Chollar-Potosi has been exceedingly active, and some 900 feet changed hands, dropping from $169 to $110, advancing to $130, and selling yesterday at $117@$119.

The bottom of the Bajazette Ground has considerably improved recently, and now discloses a seam of ore some 15 feet in width. The new shaft has attained a depth of 505 feet, and the drift is in some 25 feet. During the week ending December 10th, 262 tons of ore were sent to custom mills, and 74 tons were sold at $5 per ton.

Empire Mill and Mining Company has been dealt in within a range of $180 cash, and $160, closing at $175. The annual meeting of this company will be held on the 20th instant.

Belcher has been active at much lower rates, and some 50 feet were dealt in, declining from $265 to $125, rallying to $145, and selling yesterday at $150@$130. We can learn of no new developments in this claim.

Bacon Mill and Mining company has been inquired for at $110 per share. During the month of November, 1,357 tons of ore were taken from the mine, yielding about $33,000, or an average of $24 per ton. The current expenses were some $21,000, and we are informed that a dividend will probably be declared for the month of December. It is stated that between the 3d and 4th stations there are some 2,000 tons of ore in sight, and within 60 days the 5th level will be opened 70 feet lower down on the slope of the ledge some 100 feet of stopes.

Hale & Norcross fell from $170 to $100, rallied to $120, and sold yesterday at $100. Confidence declined from $40 to $20, and then sold at $22.

Imperial declined from $106 to $77, seller 30, rose to $92, and was dealt in yesterday at $87@$86—some 1,300 shares changing hands. The first clean-up this month exceeded $14,000, and the aggregate product of the mine for the month promises to equal that of November. We can learn of no new feature in the appearance of the lower level.

Overman steadily declined from $28 to $8, then sold at $8¼, and closed at about $7. Bullion fell from $24 to $13, and sold yesterday at $12½@5. Sierra Nevada was dealt in at $9@6½, and North American at $3½@3 per share.

The aggregate sales of Stocks, since Saturday last inclusive, amounted to $865,397.

A DIAMOND FROM NEW MEXICO.—The Black Hawk (Colorado) *Journal*, of November 28th, says that a man hailing from New Mexico, was recently exhibiting in that town a large diamond, which he claimed to have found in New Mexico. He said the jewelers in Denver priced it as high as $700, which was probably about one-tenth its value.

TREASURE FROM THE NORTH.—The Sierra Nevada arrived from Portland on Thursday, bringing treasure to the amount of $261,828. The telegraph reported that she sailed with $330,000.

MR. MOORE, of the celebrated mining firm of Moore & Fogus, "Morning Star" lodge, Owyhee, Idaho, recently passed through Salt Lake City, *en route* to the East. His mill has crushed from four to eight thousand dollars' worth of gold and silver per week, for the last eighteen months—enough to make him another Crœsus.

A TRIBE of English gypsies has appeared near Trenton, N. J., where they support themselves in the traditional fashion, by telling fortunes and plundering hen roosts. Their number is so large as to require twenty-six wagons for the transportation of the women and children and baggage.

WITHIN five years, Victor Hugo has made $150,000 by his pen. His fame is universal. It is a curious fact that he labors under the delusion that he has mistaken his vocation; he thinks he should have been a painter.

To Delinquent Mining Companies.

We hereby give especial notice to the Secretaries, Trustees and Shareholders, of such Mining Companies as are owing us bills for advertising of OVER SIX MONTHS STANDING, that we shall commence action, according to law, to collect the amounts due, if the same are not immediately settled.

DEWEY & CO.,
Office Mining and Scientific Press, Nov. 25, 1865.

Notice.—The interest of E. D. Waters, Jr., in the job printing firm of Dewey, Waters & Co., has been purchased by A. T. Dewey. The business of the late firm will be continued under the title of "MINING AND SCIENTIFIC PRESS JOB PRINTING OFFICE."

San Francisco, November 18, 1865.

Deserved Testimonial.

GRIZZLY FLAT, Oct. 18, 1865.

MESSRS. HUNGERFORD & HENRY—*Gentlemen:* We have run your Concentrator for several days past, in our 5 stamp Mill, and, as far as can be ascertained at present, it is a perfect success. When running at the rate of from two hundred and ten to two hundred and twenty-five revolutions per minute, we have lost neither quicksilver nor sulphurets. Formerly, when using copperplate riffles and blankets, we found that in spite of the utmost precaution, quicksilver would escape over them all. Wishing you all success, we remain Your obedient servants,

E. A. BIGLER.
17v11qy S. F. DAVIS.

Metallurgy.

EUROPEAN METALLURGICAL WORKS,
—AND—
Practical Mining School,
Bryant Street, Between Third and Fourth,
SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

S. P. KIMBALL, J. R. MURPHY.
10v10

G. KUSTEL,
Metallurgist and Mining Engineer,
Stevenson House, corner Montgomery and California sts.
Ores Analyzed,
Advice given, and Plans Furnished for working of different Ores. Mines examined and reported upon.
20v11-3m

BOALT & STETEFELDT,
Metallurgists and Mining Engineers
AUSTIN, NEVADA.

Western Branch of ADELBERG & RAYMOND, No. 90 Broadway, New York. 11v11

FIRST PREMIUM
FOR REFINING COAL OIL,
At the Mechanics' Institute Fair, 1864.

The PIONEER PETROLEUM OIL WORKS CO. is now ready to advance money upon every kind of Mineral Oil, from five to one hundred thousand gallons, upon assays certified to by Professor E. Benoist, Office Hours—Before 10 o'clock A. M., or between 2 and 4 P. M.

E. BENOIST, Engineer and Chemist,
17v10 643 Third Street, bet. Brannan and Townsend.

SANTA CLARA COLLEGE, S. J.,
SANTA CLARA, CAL.

Conducted by the Fathers of the Society of Jesus.

The FIFTEENTH ANNUAL SESSION of this College will commence on

Monday, August 28th, 1865.

TERMS—Tuition in the Classical and Scientific Department; Boarding and Lodging; Washing and Mending of articles washed; School Stationery; Medical Attendance and Medicine; fuel, light, baths, etc., per session of ten months..... $350

For further information and catalogues, apply to the President of the College, or to Rev. A. Maraschi, St. Ignatius College, Market street, San Francisco.

3v11 REV. A. MASNATA, S. J., President.

Professional Cards.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the Press, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

WM. L. DUNCAN,

WATCH REPAIRING AT NEW YORK PRICES.

NEW YORK PRICES.

Economy in Advertising.—The MINING AND SCIENTIFIC PRESS is the best and most ECONOMICAL mining advertising medium in this city. Our terms are less than ONE HALF the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The PRESS contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

A Business Compliment.

PETALUMA, Oct. 4, 1865.

MESSRS. DEWEY & CO.—Gentlemen: Your note informing me that my patent for Crushing and Baling Machine is ordered to issue is at hand. Please accept my thanks for the prompt and business like manner with which the case has been conducted, and inclosed find twenty dollars for balance Government fees. Respectfully, etc.

JACOB PRICE.

AT THE
OFFICE OF THE MINING AND SCIENTIFIC PRESS
No. 505 Clay Street, corner of Sansome.

Blanks for Mining Companies, Secretaries, Shareholders and others, always on hand, or printed to order, at our office.

Among others are those of the following forms:

Shareholder's Proxy.

Know all men by these presents, that I, ... do hereby constitute and appoint ..... my attorney and agent, for me and in my name, to vote as my proxy, at a meeting of the ..... Mining Company, to be held ..... 186 , according to the number of votes that I should be entitled to cast were I there personally present.

In witness whereof I have this day hereunto set my hand and seal. .....[Seal]

Dated 186

Assessment Notice.

..... Company

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the ..th day of ....., 186 , an Assessment of .....per share was levied upon the Capital Stock of said Company, payable on the ..th day of .....186 , in United States gold and silver coin to the Secretary.

Any stock on which said Assessment shall remain unpaid on Saturday, the ..th day of ....., 186 , will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on ....., the ..th day of ....., 186 , to pay the delinquent Assessment, together with the costs of advertising and expenses of the sale. By order of the Board of Trustees.

.....Secretary.

Office.....

NOTICE.—There are delinquent, upon the following described Stock, on account of assessment levied on the ..th day of ....., 186 , the several amounts set opposite the names of the respective shareholders as follows, to wit:

Names.	No. Certificate.	No. Shares.	Amount.
Theophilo Tbistio.....	23	14	$140 00
Peter Pipe	2	3	30 00

And in accordance with law and an order of the Board of Trustees, made on the ..th day of ..... , 186 , so many shares of each parcel of said stock as may be necessary, will be sold at the.....

....., on ....., the ..th day of....., 186 , at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

.....Secretary.

Office.....

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled, by mail or express, as may be desired.

To Publishers.

An editor and practical printer, of good experience and recommendation, desires a situation and will accept a moderate salary on trial. Address this office.

WATER PIPES.—Mr. Hamilton, President of the Board of Trustees of Grass Valley, has purchased 2,500 feet of six-inch water pipe, to be laid down in that town. It was purchased of the Spring Valley Water Company of this city, and is nearly as good as new. The cost was a dollar and thirty cents a foot.

A SINGULAR ATTACHMENT.—A pelican flying over Stockton the other night, got enamored of a newspaper carrier, or the lantern which was lighting him on his rounds, and lit by his side. He secured him and conveyed him to his residence, since which time he has become thoroughly domesticated, following the boy like a dog.—*Independent.*

INLAND SEAS—The tule lands overflowed by the Sacramento and American rivers, in Sutter and Sacramento counties, are now vast inland seas. In many places farm houses seem to be setting on little islands, surrounded by water, in which swarm wild geese, pelicans, ducks and other aquatic birds.

THE TURPENTINE TRADE.—The amount of turpentine manufactured at Dogtown, in Butte county, this season, is immense. The boxes of rosin number 2,350, and 24,000 gallons turpentine. The lumber required to box the rosin, was 45,000 feet, and 520 barrels to hold the turpentine.

THE sum of ninety thousand dollars has been subscribed to the stock of a company which is to commence the manufacture of wool on Puget Sound.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Office, Room No. 2 (3d floor), N. E. corner Pine and Montgomery streets. dec2

Lady Franklin Gold and Silver Mining Company, Silver Mountain District, Alpine County, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 7th day of December, 1865, an assessment of fifty (50) cents per share was levied upon the capital stock of said Company, payable on the 12th day of December, 1865, in United States gold and silver coin, to the Secretary, at his office, 305 Montgomery street, San Francisco, Cal., or to THOMAS PETERS, at the mine at Silver Mountain.

Any stock upon which said assessment shall remain unpaid on Saturday, the 6th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Friday, the 26th day of January, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

J. S. LUTY, Secretary.

Office, 305 Montgomery street, San Francisco. dec

Mount Davidson Gold and Silver Mining Company. Location of Works: Virginia District, Storey County, Nevada.

And in accordance with law, and an order of the Board of Trustees, made on the 6th day of November, 1865, so many shares of each parcel of said stock as may be necessary, will be sold at auction, by Olney & Co., at the office of the Company, No. 7 Stevenson Block, San Francisco, Cal., on the 23d day of December, 1865, at 12 o'clock M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

M. G. ELMORE, Secretary.

Office, No. 7 Stevenson Block, corner Montgomery and California streets, San Francisco. dec9

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can secure all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements at their earliest convenience. New advertisements should be sent in as early as possible.

How to tell the Age of a Horse.—When the incisor or cutting teeth of the horse (called in man the front teeth) first protrude through the gum, their top face is not smooth, the edges are elevated, and the centre depressed. The depression in the cutting surface is called the *fossula*. The fossula is not subjected to friction during the mastication, owing to the edges of the tooth. The fossula, therefore, soon becomes black, and the black spot thus left is called the "mark." In time the elevated rim of enamel wears down, the cutting surface of the tooth becomes flat, and as a consequence, the whole surface is exposed to attrition, and the mark disappears. The time occupied in wearing away the mark is pretty uniform—about three years. Now, since we know about the age at which the teeth are put up, and about the time that the mark remains, we can calculate about the age of the horse so long as marks are left. At the age of three, the second set, or permanent teeth, are put up in the centre; and after this, one pair of permanent teeth appears every year till the age of five. The central pair of incisors consequently loses its mark on the attainment of the sixth year; and the pairs which appear in the fourth and fifth year lose their mark in the seventh and eighth. After the eighth year there is no accurate means of estimating the age of the horse; therefore, all horses over eight years are technically termed "aged"—aged, that is, not as regards the decline of the vital energies, but simply as regards the wearing out of their marks.—*Chamber's Journal.*

A dwarf elephant, about as large as a Newfoundland dog, will soon arrive in New York for Barnum. It cost $11,200.

PATENT RIGHT FOR SALE.

The patent right for the United States of a valuable invention can be secured at a bargain by applying at this office. The article is one of general application throughout civilization.

DEWEY & CO., Publishers.

QUARTZ OPERATOR'S

HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,

Authors and Publishers.

Bound in Cloth—144 Pages, Duodecimo.

The Quartz Operator's Hand Book is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

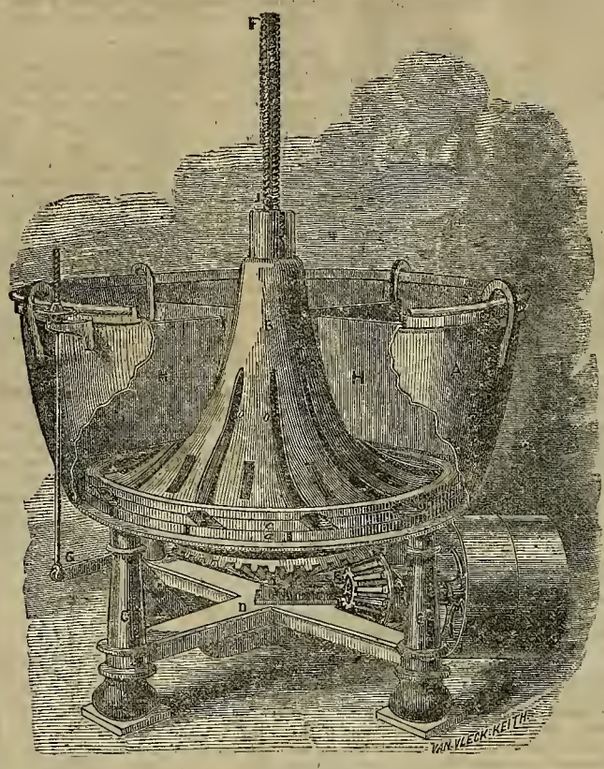
The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs. W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable Quartz Miner's Hand Book.

The Table of Contents of this book will be found on page 415 of the Mining and Scientific Press of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and o, Openings.

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

ANOTHER AMENDMENT to the Constitution of the United States is proposed, which contemplates the constant succession of the Vice President to the Presidency. A President and Vice President are elected. At the end of four years, the former retires and the latter takes his place. Of course at each subsequent election only a Vice President is chosen. In this way the one-term rule is adopted; the Vice President is selected with special reference to his fitness for the first position, and for four years he is being educated for the vast responsibilities he is to assume.

THE discoverer of nicotine, Chevalier Gaspare Cerioli, died recently at Cremona.

Removal.

The Office of the MINING AND SCIENTIFIC PRESS has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive JOB PRINTING OFFICE.

San Francisco, April 10th, 1865.

New Volume

—OF THE—

Mining and Scientific Press

Issued every Saturday. Each number contains 16 pages and 64 columns (size of Harper's Weekly).

PUBLISHED BY

DEWEY & CO.,

Patent Agents, Publishers and Job Printers
505 Clay Street, San Francisco.

THE ELEVETTH VOLUME

Of the MINING AND SCIENTIFIC PRESS commences under advantages most gratifying to its publishers, who assert, with pleasure, that a continued improvement in this journal may be anticipated by its numerous and rapidly increasing readers.

We shall continue to devote a large space in our columns to the various and best methods of treating ores and saving gold and other precious metals in every form, furnishing valuable hints to millmen, prospectors, oil-workers and miners generally, not to be found in any other publication.

New machinery, latest inventions and discoveries, and all matters pertaining to the mechanical, manufacturing and industrial resources of the Pacific States, will receive careful attention.

Stock market reports will be published as received from the official records. Our carefully compiled "Mining Shareholders' Directory" will prove a faithful monitor to parties holding stock, and a desirable record for reference to brokers.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

☞ BOUND VOLUMES FOR SALE.☜

HENDY'S
IMPROVED BLOW-PIPE.
This Convenient Helpmeet
—TO THE—
ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the PRESS of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth-piece and the pipe, enabling the blowar to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continuous current of air is forced from the nozzle of the pipe by the mere contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

Price, Complete.....$5.00.

Machinery.

HUNTER'S
PREMIUM
CONCENTRATOR, AMALGAMATOR
AND SEPARATOR,
Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERation daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 30 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste free gold and amalgam is amalgamated on the copper plates; no trace of ground mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, when with the greatest IRREGULARITY OF SPEED the best of results were given.

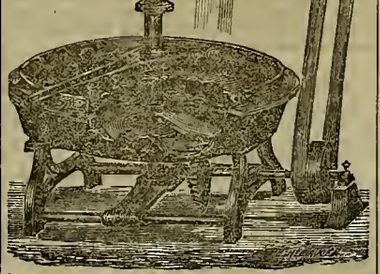
5th. There is no clogging or stopping to clean out the sulphurets and sand; consequently no waste from any inattention on the part of the attendant.

6th. In exhibiting the working of the machine (it is not run empty) all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see fit to test the machine with.

Give it a trial, and satisfaction is guaranteed. All orders and any information required, address,

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15v11-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD'S
Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jefferson-Ian Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada City; Crail's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works, Miners' Foundry and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8-6df

BLAKE'S
QUARTZ BREAKER
Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
—AND—
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th. [Illustrated in the Mining and Scientific Press, April 8th, 864.]

Stevens' Pressure Packing.

Patented March 7th, 1865.

Pressura Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight.

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which now have this packing in use—some of which have been running from three to twelve months without being opened, or showing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Alameda Railroad, or at the VULCAN IRON WORKS, where they can be seen, at any time, in course of construction.

10df **ANDREW STEVENS.**

SALMON'S
PROPELLOR AMALGAMATOR
—AND—
Challenge Settler

Has been in use and thoroughly tested, both in California and Nevada, with entire satisfaction to all parties concerned. These Machines are

Made entirely different from any others,

And with the same power will grind, amalgamate, settle and separate, more gold and silver ore than any others now in use. Manufactured at the SAN FRANCISCO FOUNDRY, where Machines can be seen in operation. Address

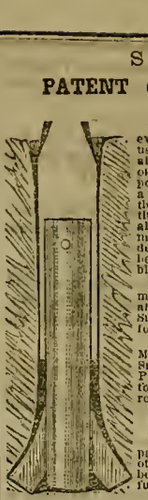
STOW'S
PATENT CHAMBER DRILL.



The greatest Labor-saving Machine ever invented for Quartz Mining. By using this Drill a shaft, tunnels, and all other rock blasting, three-fourths of the labor and over one-half of the powder will be saved. The Drill makes a chamber directly at the bottom of the hole, at any depth you wish, six times the area of the original hole, in all kinds of rock, in less time than a man can drill a 1½ hole two inches deep. Requiring no tamping, it will be impossible to have a premature blast.

AT THE STATE FAIR held in Sacramento, September, 1865, a Committee, after examining both the Lincoln's and Stow's Chamber Drills, reported as follows:

We, the undersigned, Committee on Mining Tools, do award to Henry M. Stow, of San Francisco, the FIRST PREMIUM for the best Chamber Drill for blasting rock, for the following reasons:

1st. For simplicity of construction.
2d. For durability of drill;
3d. For strength of drill.

The above Drills will be sent to any part of the State for $30, with one set of Cutters or Chisels that will chamber from 75 to 150 holes. Extra Chisels furnished at $2 50 per set.

The Drill may be seen at Mr. BUFFINGTON'S Office, No. Government Block, corner Sansome and Washington streets, and at No. 511 Market street.

Drills will be delivered to any part of this State free of expense to the purchaser. Any information desired, or orders for Drills, address

STOW & COLLINS,
San Francisco

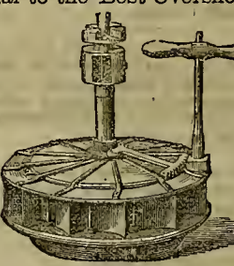
Oil Wells! Oil Wells!!

I received at the last STATE FAIR a special Premium for the best Expanding Drill for boring oil wells. The above Drill will bore the hole from ¼ inch to 2 inches larger than the inside of the pipe or tubing of the well, if desired, making the bore perfectly straight and round. The Drill can be attached to and work with any common drill at an expense of from $25 to $50. I will furnish all machinery for boring, or will take contracts for boring wells, and furnish steam engines and all tools required. Address,

HENRY M. STOW,
14v11 San Francisco.

WATER WHEELS!
Equal to the Best Overshot Wheel

POWER PLEDGED



IN EXISTENCE.

LEFFEL'S
AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 30½. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 150 to 300 pounds, will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
At Vulcan Iron Works, office 137 and 139 First street, San Francisco. 4v11tf

VARNEY'S
PATENT AMALGAMATOR.
These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The carved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ores is reduced to an impalpable powder, and the metal amalgamated.

Setlers made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setlars for themselves, at the **PACIFIC FOUNDRY,**
1v1 San Francisco.

MITCHELL'S
COMBINED
FAUCET AND MEASURE.

This is one of the most useful inventions of the day, and is destined to go into universal use on this coast, as it has in the Eastern States.

The invention consists of a combined Faucet and Measure, so arranged that the liquid contents of any cask or other vessel can be drawn and accurately measured without the use of measures or funnels other than such as are embraced in the Faucet itself. While it obviates altogether the use of measures, it operates much more perfectly than the old method of drawing and measuring such liquids as have a tendency to foam up when drawn, as coal oil, linseed oil, etc.

The Proprietor has made arrangements with GALLAGHER, WEED & WHITE, of the California Brass Foundry of this city, for the manufacture of this Faucet, and is prepared to furnish the article or sell territories. Here is a chance for men with small capital to invest in a good business.

Residence, 320 Taylor street, near O'Farrell street.

D. C. MITCHELL, Prop'r.
San Francisco, Aug. 22d, 1865. 10v11-3m

At a recent fireman's parade in Philadelphia, *fifty-seven* steam fire engines appeared in the procession.

There are 3,612 "whisky mills" in San Francisco, which cost the people more than all the churches and schools in the city.

Five hundred tanned deer skins have been sent, within the last month, from Trinity county to Marysville and a market.

Mrs. Sigourney is to have a monument erected at Hartford. She has written, it is said, twenty-two hundred poems, during the war, to private soldiers.

New York city crowds its population of about a million into 55,000 houses. Philadelphia, with less than seven hundred thousand people, has 100,000 houses.

Our brains are seventy year clocks. The angel of life winds up once for all; then closes the cases, and gives the key into the hand of the angel of the resurrection.

We like the story of a blacksmith, who was requested to bring a suit for slander. He said he could go into his shop and hammer out a better character than all the Courts in the State could give him.

A cotemporary has hit it in saying, "when lawyers make short deeds and mortgages, and physicians write prescriptions in English, many ancient humbugs will be exploded." Two, if not many.

A party of young men, a short time since, while digging for roots some miles north of Vincennes, Indiana, discovered an old leather sack containing $7,000 in gold and $8,000 in silver. It is supposed that it had been concealed there by robbers.

A second great artesian well, flowing 290,000 gallons daily, has been struck at Chicago. Its diameter is five inches, though the intention is to enlarge it to twenty-two inches, at which size it will have a discharge capacity of seventeen millions gallons daily.

The famous Dutch Gap Canal is to be turned to the peaceful uses of commerce and trade, by the citizens of Richmond, who are about to increase its width and depth to an extent sufficient to admit the passage of the largest vessels and steamers.

RUGGLES' PRINTING PRESS

For Sale or Exchange.

The Proprietors of the Mining and Scientific Press have on hand a Half Medium Ruggles Engine Job Press, in condition good as new, which will be sold cheap, or exchanged for a good Hand-Press of medium or large size.

Office, 505 Clay street.

STANDARD SOAP CO.'S
WASHING POWDER.

Facts that can be Proved:

One Pound of the Standard Soap Co.'s CONCENTRATED ERASIVE WASHING POWDER will do the work of two pounds of Bar Soap, saves half the time, labor and expense; does not injure the clothes, but turns them out sweet and clean. No additional Soap needed; works equally well in hard and soft water; excellent for woolens, as it contains no resin; splendid for dishes, milk cans and dairy fixtures. Ten pounds will produce a barrel of fine Soft Soap in ten minutes.

Manufactured and put up, with full directions for use, in pound papers and packages of 10, 12 and 24 lbs., by the

1852. 1865

Thirteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, The Golden Era is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

The Golden Era is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

The Golden Era is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render The Golden Era a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome The Golden Era as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the Golden Era, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the Golden Era are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

IN THE GOLDEN ERA,
"THE FAIR LILIAS;"
Or, "LIFE IN DEATH,"

A New Story, by Pierce Egan, Author of "The Poor Girl," "The Flower of the Flock," "Lady Maud," "The Snake in the Grass," "Such is Life," Etc.

PIERCE EGAN is undoubtedly the most fascinating and attractive Novelist of the age. His stories are eagerly sought for, read and admired by hundreds of thousands in England and America. "The Fair Lilias; or, Life in Death," surpasses, in exciting interest and thrilling situations, all of the productions of the celebrated author, and is Pierce Egan's masterpiece.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

NEW PUBLICATIONS.

SHERMAN'S MARCH THROUGH THE SOUTH; with Skelches and Incidents of the Campaign, by Capt. David P. Conyngham. Laws, Brewer & Co., General Agents for Subscription Publications, northwest corner of Washington and Sansome streets, San Francisco.

This is a well-written and interesting narrative of Sherman's campaigns from the time that General succeeded General Grant as commander of the Army of the Mississippi, including the terrible battles between Chattanooga and Atlanta, and the ever memorable "March through Georgia," and thence up the coast into North Carolina, where the last great army of the rebellion, under Johnston, surrendered to the gallant Sherman. The work has been written by a "war correspondent," who was with the gallant heroes who have added these brilliant pages to our country's history, and who knew personally of what he wrote. He had, moreover, received a previous schooling in the same capacity with the great Army of the Potomac. The narrative is written in a free-and-easy style, entering much into the minutia of camp life, and giving numerous graphic descriptions of incidents which have never yet found their way into print, and which, though they are of the greatest interest to present readers, could never find their way into the ponderous pages of "legitimate history." The work possesses all the charms of a romance, with the added interest of being an authentic narrative of the greatest and grandest events which the world has ever witnessed. It is published and sold by subscription only, by Messrs. Laws, Brewer & Co., sole agents for this coast. Three numbers only were received by the last steamer; but a full supply will be at hand by the next arrival. Messrs. L. B. & Co. are also subscription agents for the "Scout & Ranger," the same being "The Personal Narrative of Corporal Pike, of the Fourth Ohio Cavalry." This is a thrilling description of the personal adventures of a Ranger in the Indians wars, by one who was subsequently a scout and spy in Tennessee, Alabama, Georgia and the Carolinas, with numerous engravings, which, with the text, is fully illustrative of the "scout service."

A STEAMSHIP RACE FROM NEW YORK TO SAN FRANCISCO.—The Nicaragua Opposition put on their best steamer at New York, for the last trip, determined, if possible, to beat the P. M. S. Co.'s line to San Francisco. The latter company, however, easily beat the opposition, coming in more than two days ahead, and making only regular time. The Pacific Mail Steamship Company is one of the best appointed ocean lines in the world.

AN OPINION FROM DR. JACKSON.

It will be recollected that Dr. C. T. Jackson, of Boston, during his late visit to this State, visited the oil regions of Santa Barbara, in his professional capacity, as a mining expert. His observations being made on private account, were not published here, but were sent East. By the last mail we are in receipt of the following, which we clip from the N. Y. *Stockholder*, as the only public expression of the Doctor's views, with regard to our oil deposits, which we have yet met with. The article is an extract, and appears to be the "summing-up" of the results of his observations. It reads as follows:

From analogy, it seems probable that petroleum should occupy the same relation to the coal formation of the tertiary age as those of the Eastern States bears to the true coal formations, and hence we ought to expect it to be found in the lower portions of the tertiary and on the cretaceous rocks. It is certain that it comes through the tertiary, and is most abundant near the junction of the tertiary with the cretaceous strata, and particularly where there are fractures of these strata or marked dislocations. From these considerations, it would appear probable that petroleum will be found to a considerable depth, and if there are cavities and pent-up gases, the petroleum will be forced up when these oil-containing strata are pierced by the artesian auger. If the gases are not retained under compressure, the rising water of the springs will bring the petroleum which floats on its surface up the tubes of the bored wells, and it may be raised by pumps. Thus far the evidence seems to be that all the petroleum-springs which pour from the mountain-sides are brought to the surface by rising springs of water, and the open condition of the strata, which are here inclined, (while those of the Eastern States are mostly horizontal,) allow the gases too free exit to admit of their acting by their elasticity to raise the petroleum to the surface; but there will, undoubtedly, be found some localities where the gases are really pent-up. I am therefore of the opinon that the prospects here are favorable, and that there is reason to believe that good oil-springs will be opened.

We infer from the above that Dr. Jackson, in common with all who have carefully examined the geology of the Pacific coast, is of the opinion that the true coal measures, as they are developed in the Atlantic States and in Europe, are wanting on this coast; but, that in their stead we here find the lignites and semi-bituminous coals among the tertiary and cretaceous rocks—formations of much more recent geologic age than the true coal measures which date back to a much earlier period, and which are older than even the gold bearing rocks on the western flanks of the Sierra Nevada, are by many *supposed to be*. The Doctor, if we understand him in the above extract, supposes that the *oil* rocks, as well as coal bearing rocks of California, also belong to a system much more recent than the oil strata of the Atlantic States, and one corresponding to our peculiar system of coal measures. We suppose further, from the above, that it is legitimate to infer that he thinks the yield of oil in California will bear a relation to the Atlantic yield, something similar to the proportionate coal development of the two regions.

This inference, it must be admitted, is rather to our disadvantage, although it by no means should lead us to conclude that we may not obtain oil here in paying quantity; the Doctor, indeed, expressly intimates that he thinks we shall do so. There is one fact in our favor, however, quite well established—which is that the crude oil of California, as a general thing, is quite superior in quality to that obtained at the East; and it may be, that, unlike wine, age (which the oil has obtained at the East) is not favorable for petroleum. Moreover, it is generally acknowledged that the geology of California is, as yet, but imperfectly understood by any save the members of the State Geological Survey, where reticence upon the subject warrants the supposition that *they*, perhaps, may be in possession of important facts not generally known to those who have employed them to gather such information for the benefit of the people. What we may learn from the forthcoming second volume of the Geological Reports is yet a mystery; but we are assured, most positively, that the volume will be placed before us on the arrival of the "next steamer," when we hope to be more thoroughly posted. In the meantime, as for two or three years past, our oil borers and coal and gold seekers are "going it blind." Perhaps their perseverance and industry may yet lead to discoveries which shall astonish the *savans*—who knows!

"THE LUCKY" MINE IN GRASS VALLEY.—We have been shown, by Mr. D. O. Osborne, one of the proprietors of the above named mine, now in this city, a private letter dated at Grass Valley on Tuesday last, and written by another member of the company, stating that they had just obtained the result of the first week's crushing of ore taken from the new level, which has recently been opened about a hundred feet below the previous workings. The amount of bullion was 180 ounces of retorted amalgam, worth fully $3,000. The amount of rock crushed could not have exceeded 65 tons, which would indicate a yield of over $45 to the ton. Taking the locality of this mine into account, and the facilities presented for its being worked extensively, when properly opened, and its uniform yield up to the present time, we doubt whether anything can be found, in all the State of Nevada, which can equal it. The development of this lower level puts the value and permanency of the mine almost beyond the possibility of a doubt. It is a "lucky" mine, indeed.

NOBEL'S PATENT BLASTING OIL.—We have devoted a large space in our columns to-day to the constitution and peculiar properties of Nobel's patent blasting oil, and an illustrated description of the manner of employing it for mining purposes. The extracts which we give are from a pamphlet now being printed at the MINING AND SCIENTIFIC PRESS Job Printing Office, for Messrs. Bandman & Nielson, the agents on the Pacific coast for this new and extraordinary blasting material. The great interest which attaches to this new discovery, and the important practical bearing which it promises to exert upon our great leading industry of mining, is amply sufficient to call for the space allotted to it. We commend its careful perusal to our mining cotemporaries and readers generally. The work in publication gives testimonials from the highest European sources, of the success of this new blasting agency in its practical application to mining and quarrying.

AN EXTRAORDINARY SPELL OF WEATHER.

There is no parallel in the experience of the "oldest inhabitant" hereabout, for the long continuance of the extreme cold weather which has lasted now over two weeks, without wind, and from no apparent cause. There has been snow in Sacramento two or three inches deep, and an unusual quantity in the mountains, and ice has formed in this city over half an inch thick. The Columbia river, in Oregon, has been frozen over; and there has been so much ice in that river as to materially interfere with the movements of the steamers. The telegraph informs us that the steamer was unable to reach the Cascades on Tuesday last, and had to return down the river. It also announces that the same extraordinary degree of cold is prevailing throughout the Atlantic and Western States. The Mississippi has been frozen over at St. Louis, and deaths from freezing are of frequent occurrence; while an unusual number of conflagrations have occurred from overheated stoves and flues. Reports of a like character are also beginning to reach us from Europe. The barometer in this city, for the last two weeks, has manifested most unusual perturbations, often falling to the lowest storm point, and then suddenly rising again to a fair weather indication; repeating these variations, at times, twice or thrice in a single day, and yet without any perceptible change in the atmosphere which might be supposed to cause such unusual variations. At the present time of writing, Friday, 5 P. M., the barometer stands lower, we believe, than ever known before in this city. It has been supposed by some that these barometrical variations and this unusual cold weather may be due to a peculiar electrical condition of the atmosphere; and that possibly the late severe earthquake on this coast, and similar disturbances in other parts of the earth, and unusual volcanic disturbances everywhere, as well as the extraordinary large spots which have been noticed on the sun, during the past summer, are all more or less responsible for the weather and the extraordinary behavior of the barometer. We throw out these hints, or rather, we repeat what is common talk among many of our thinking people, without drawing any conclusions, leaving it for the adventurers in the school of philosophical progress to elucidate the various phenomena to which we have alluded.

SAN FRANCISCO DIRECTORY FOR 1866.—We have received from the publisher, H. G. Langley, Esq., a copy of the San Francisco Directory for 1866. The present volume fully sustains the reputation of the previous issues, and reflects the highest credit on both the compiler and printers, and is an honor to the city whose business and citizenship it represents. It will compare favorably with any work of the kind in any city in the world. We shall notice it more at length next week.

CINNABAR has recently been discovered in Tulare county, in the foot-hills, to the west of Buena Vista Lake. The mineral doubtless exists to a greater or less extent, throughout the entire coast range, from Del Norte county to Los Angeles.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

Mining in the Pacific States, etc., Past, Present and Prospective.

BY PROFESSOR ROWLANDSON, F. G. S. L.

MORE ABOUT THE COST-BOOK SYSTEM.

It was truly remarked, in a leading article in the last number of this journal, that I did not wish this community to adopt the Cornish Cost Book system in its entirety; I merely recommending it to notice, in order that the better part of its provisions might prove suggestive of amendments in regard to the rules which now apply in California, etc., etc. The Cost Book system originated in a condition of things not greatly dissimilar to what existed at the time that placer mining commenced in California. Read stream tin for placer gold, and the comparison holds good throughout—tin-hounding being the equivalent to putting down a stake and notice. It is a fact worth noting that it is customary at the present day to set up a pole at every mine in Cornwall. I have repeatedly inquired the reason of this, but never could glean any more satisfactory answer than that it was a very old custom, so old that no one knew its origin. As copper mining in that country is of very recent origin, not dating earlier than the commencement of the seventeenth century, and originated probably in consequence of working or searching for tin, it may be safely concluded that the custom of setting up a pole at every separate mine originated before that period, especially as copper mining in that district scarcely acquired much economic importance, until nearly the middle of the eighteenth century, its great development not occurring earlier than the latter part of the last century, when the great impulse was given to mining, especially where deep, by the introduction of Watts' improved engines.

In order to avoid entering on any mythical theories respecting the course pursued by "streamers" in the division of the proceeds of their labor, when the Phœnicians traded to Cornwall for the tin, which probably ultimately formed part of the bronze instruments and castings found by Layard, Rawlinson, and others in the ruins of Babylon, Ninnevah, etc., I shall proceed to more particularly state than I did in my former paper, the more recent but somewhat primitive mode of conducting periodical meetings under this system. As previously related, so far as we are informed by modern tradition, periodical meetings, under the Cost Book system, were usually held monthly, sometimes at the mine, but more frequently at an ale-house; the adventurers generally consisting of well-to-do farmers, shop and storekeepers, laborers, and overseers of the mine, with, occasionally, a speculating gentleman of landed estate, or, as sometimes happened, a benevolent person of the same class who would take a small risk for the sake of affording an additional source of employment to workmen resident in his vicinity. It will be easily apprehended from the description given that all such persons would not only possess considerable local knowledge, but, from their proximity to the mine, would be enabled to personally examine into its management. These were advantages which could not be possessed by a distant proprietory. Notwithstanding the disadvantages under which the latter would labor, it has rarely if ever occurred that any serious inconvenience has arisen in consequence, excepting in cases where down-right swindling has actuated promoting parties, aided by employees appointed by their influence. As mining became more extensive, and the capital was chiefly found by contributors who resided at a distance, quarterly meetings were found sufficient, but not too frequent—in fact, practically formed the just medium.

Submitting what may be termed the legislative power to the body of stockholders, in mining corporation within periods not exceeding three months, and the executive authority in that of trustees or agents during the interval, cannot be so productive of evil as in the case of ordinary trading, banking, commercial, or manufacturing associations; in such the executive department necessarily requires an amount of confidence not at all necessary in mining operations. In the last-named questions of credit, rise or fall in markets (excepting in a very trifling degree), either as respects buying in or selling off, scarcely ever arise, whilst in the first part named it will be at once seen how injurious it would be to publicly canvass such points. Mining is necessarily a slow proceeding. Setting off with the commencement of works at a new mine and accompanying mill, it will rarely occur that the latter will be found ready for working under twelve months, during which period all that would be requisite to be done would be to supply the funds periodically, as required; it being always understood that at the commencement something like an approximately correct estimate is exhibited to the stockholders, not only of the entire cost, but also the probable time the works would require for their execution, and the sums needed at different intervals. The power of the engine to be ordered, the size of buildings, according to a plan furnished, amount of stores to be ordered, or powder, candles, etc., by way of stock, may all be legitimately discussed and legislated on by the general stockholders in meeting assembled, without injury to their common interests; but the making contracts for engines or supplies, together with all matters relating to general management, may safely and properly be left to the trustees as the executive body. It will thus be seen that the executive management will remain with the periodically appointed officials. When a mine is about to be opened, the first duty of a superintendent is to lay before the trustees, and the latter afterwards to lay before the stockholders, a general plan and estimate for opening the mine. When executed, it can rarely happen that any serious mischief can arise in three months, either from improper sinking, or driving, or delaying either for such a period. As a usual thing, all these matters are first designed and reported on by a qualified superintendent, and if approved at the periodical meeting, carried into effect without further interference of the general body. Of course, such a system implies the appointment of a qualified person or superintendent. To expect practical advice on mining and metallurgic management from a superintendent only recently called from the counter, the desk, the stage, or a ship, would be absurd; yet, from such sources have superintendents heretofore been appointed.

Perhaps the only feature connected with the Cost Book system which may probably require serious alteration, will be that part of it which relates to the forfeiture of delinquent stock. The present laws which affect the sale and forfeiture of such, are, however, so defective that some alteration must be made; for as they now exist, they are so paradoxical that it is almost impossible for trustees to make a legal sale of delinquent shares; and in some cases, such as where the operations are carried on at distant places, like Arizona, time will not permit the conditions of the law to be complied with.

As a perhaps not inappropriate pendant to this subject, it may be worthy of notice that if we compare the ancient laws relating to tin-streaming and tin-bounding, in Cornwall, of miners claiming their "meer" from the bar-master of the High-Peak, in Derbyshire, in order to work for lead, or the more recent but still ancient "gales" for mining for coals and iron in the Forest of Dean, Gloucestershire, in England, the ancient mining laws of Saxony, with the laws of placer and quartz mining in California and Australia, a great likeness exists, showing that a common principle of equity has pervaded and still pervades mankind in all ages and places, however remotely dissevered by distance or remoteness of time. It might be well, perhaps, if local mining courts could be established, such as the stannaries and bar-master courts, for settling rights and disputes in the lead district of the High Peak.

MODES OF REDUCTION.

Respecting the various feasible known modes of economically reducing silver ores, a very concise recapitulation appeared, from the pen of Professor Lanszweert, in the number of the Mining and Scientific Press issued on the 2d instant. About five years ago I published a somewhat similar statement, omitting only two of the methods detailed by Professor Lanszweert, viz., the old Hungarian and Gurlts' process. the former is expensive, rather inefficient, and if scrap iron is not employed, the pans of iron soon become useless from corrosion. Until the article of the Professor came under my notice, I was not aware that the use of the chloride of copper (Gurlte' method) ever attained the distinction of a special process. Few silver ores are found without containing some copper, which, if the ore is roasted, and common salt is afterwards supplied, will at once convert the sulphate of copper formed by the roasting into a chloride. It has, however, hitherto been found that when the chloride of copper is present, the silver har obtained contains a large admixture of copper; such is found to be the case in Saxony. It is possible, however, that in the instance just named, that the alloy of the silver with copper is, in a great degree, the consequence of employing iron to reduce the chloride of silver, the use of which will precipitate a proportion of the copper also.

This (Gurlts') method, however, is one worth attention, because when once put into operation, it will not require any great amount of scientific skill to maintain it in continuous working order. Whether it possesses any material efficiency as a solvent over the use of common salt alone (Augustin's process), I am not prepared to either assert or deny. It appears to possess advantages over what Professor L. terms Partode's process—namely, the use of ammonia. Why this last-named method has been termed "Partode's," I cannot imagine or account for, other than by the very common circumstance that the earlier proposers and discoverers of improvements not unfrequently are dead and forgotten, and their wisdom buried in oblivion, until a generation or two have succeeded them; after which, some favorable opportunity occurring for putting their suggestions into practical operation, up starts some pseudo discoverer or pretended inventor who claims and obtains all the honor and profit. In the letters written by me, already alluded to, I named the employment of ammonia, and I think, also, gave due credit to its first proposer, Berthier, who, about thirty years ago, wrote as follows:

"Le mercure ayant maintainant un tres-haut prix, et etant un cause de grand depense dans le traitement des minerals d'argent par la chloruration, on cherce par toutes voies a se passer ce metal. On sait depuis longtemps qu on pourrait le remplacer par l'ammoniaque on par le carbonate d'ammoniaque, qui dissolvent le chlorure de'argent avec un tres grand facitite, maie on n'a pas encore fait usage de ces agents. Je crois que le moment es venn de les employee," etc., which may be translated as follows: Mercury having maintained a very high price, and a cause of great expense in treating silver ores by chlorination, all ways have been sought to avoid the use of this metal, which, after considerable thought, it would appear, may be replaced by ammonia or carbonate of ammonia,* which dissolves the chloride of silver with great facility. The use of ammonia, unless very accutely fitting closed vessels are employed, would be a great nuisance. The restoration of ammonia from the chloride formed would require the attention of a more elaborate chemical apparatus than would be generally comprehended by ordinary workmen. In fact, to keep this process in working order, would necessitate the constant attention of a skilled person. Whether the use of chloride of ammonia in place of chloride of sodium (common salt) would be of advantage sufficient to more than recompense the extra outlay required by employing this more expensive material, I am not prepared to state. It may, however, be remembered that chloride of ammonia (the cheapest source of ammonia) could not be landed in San Francisco at a cost less than one hundred dollars per ton, above that of common salt. Ammonia and its compounds could, however, with careful attention to their management, be used over and over again, with very little loss. Where the silver is combined *solely* with chlorine, or mixed with other haloid substances as iodine or bromine, ammonia and its salts might probably be economically employed, as however natural chlorides are almost invariably associated with a greater or less proportion of sulphides and native silver, these must escape the action of ammonia and its compounds; or if any took place, it would probably be the following reaction: the conversion of the existant native silver into a sulphide, which is insoluble in those substances.

I shall only briefly refer to the so-called Von Pateras' process, partly with the the object of remarking that, like Partode's, the title is not assigned to the proper discoverer. Five years ago I very fully gave the details of this method, which was the discovery of Dr. Percy, Professor of Metallurgy in the School of Mines, London, whose elaborate works on Iron, Copper, etc., are well known. It was introduced in order the more easily to extract silver from the chlorides, chloro-iodides, and chloro-bromides of silver, which, about twenty-five years ago, were discovered and worked at some places in Chili to an immense extent, as at Chañarcillo, for instance; soon after its introduction,† Dr. William Brande, master of the British Mint, recommended the waste lime from the purifiers of gas works, as a cheap source for obtaining the solvent (hyposulphite of soda) recommended by Dr. Percy. This "gas lime" contains a considerable quantity of hyposulphite of lime, which, by double decomposition, can be converted into hyposulphite of soda. Gas lime, however, is not easily attainable at the mines; the hyposulphite of soda can, however, be manufactured by other modes; but to do so, as well as to make the precipitant (five-fold sulphide of sodium), a person possessed of some skill in chemistry would be required, whose presence would also be generally necessary for the purpose of seeing that the process was always in working order. The employment of hydrosulphite of soda as a solvent, and the five-fold sulphide of sodium as a precipitant, is a most effective, and probably the cheapest, method of reducing the natural chlorides of soda; in case, however, these are mixed with sulphides or native silver, or both, to the extent that these exist in any ore, it will be found ineffective.

The defective points in these two last described methods, will be alluded to when the subject of chloridizing (one of the great sources of loss), is reviewed.

*Chloride of ammonia (sal ammonia) will produce the like effect, but not so rapidly. I believe I mentioned this fact in my former letters.

†For a description of this process see Professor Lanszweert's paper in the Mining Press of the 2d December, instant.

NOTE.—It was not until the preceding article had been placed in type that the writer discovered a serious error, into which he had been inadvertently led, by not having read with sufficient attention Professor L.'s description of Gurlts' process, namely: the allusion to the possibility of the silver bar, so obtained, being considerably alloyed with copper. The mistake arose from erroneously conceiving that Gurlts' method was an amalgamating process, in place of simply being a humid one. The difference is highly important. The requisite explanation will be given next week; to which attention is asked, as the theory of the action which takes place, as explained by Boussingault, who was the first discoverer of the principle, throws much light on the subject of amalgamation—the Patio method, in particular.

[Written for the Mining and Scientific Press.]

"Gold-Bearing Sulphurets and their Reduction."

An article published in the Mining and Scientific Press of Nov. 9th, under the above caption, has attracted some attention, both by cause of the subject and by reason of the air of authority assumed in the signature of its author. One who signs himself a "Metallurgical Chemist" should have respectful attention, if the title is not an assumed one; and his opinion, when pronounced, should carry weight, if disinterested and carefully prepared, with the view of enlightening the public on a matter of science. The subject *is* one of grave importance to the future mining prosperity of this State. Many of the most valuable mines are almost wholly abandoned, from the want of an efficient and reliable process for freeing the precious metals, so that they can be extracted profitably. On this account, and by reason of the many failures of recent processes to meet this want, the mining public scrutinize closely not only the projects of inventors, but also the reasons set forth by those who commend them to their confidence.

Had the above named article been simply signed "John Scott," it would have passed without notice, as the effort of one interested in promoting the "invention" which it endorses, and boldly commends to the public. This design is scarcely concealed, though an effort to that effect is attempted. It may be questionable policy for an inventor to advance the success of his contrivance by condemning all other plans used or sought to be introduced for the same purpose; but it is not usually deemed good taste for a professedly scientific man to publish his professional endorsement over his own signature, in a scientific paper, unless he is wholly disinterested, and then only after a thoroughly careful investigation of the merits of the new invention; and especially must it be questionable good taste, if the Professor undertakes to discredit, unfairly, all past and present processes "seen" or merely "heard of," in order to obtain a stand-point for the commendation of a new invention. A fair and judicious discussion of prevailing methods, as also those proposed as substitutes or improvements, is most desirable; but it is not only desirable, but actually essential, that no professional sanction be affixed to a new method, unless upon sound reasons and after a practical working of the proposed improvement.

If the above-named article be examined in this light, it will be found sadly wanting in all the requisites of candid statement, disinterested discussion, and scientific investigation, with regard to those methods so curtly condemned as bad, as well as to that which is so flatly commended to the confidence of the public. The author states, seemingly in order to impress one with his peculiar ability in this

respect, that he has made "numerous experiments," and invented a method for desulphurizing ores which he abandoned as impracticable, and hence, logically, he is the better able, using his own words, "to point out what I consider to be an effectual method for the purpose." Proceeding from this stand-point of ability, "to point out an effectual method" so ingeniously established, he takes up "the common method of desulphurizing the mineral," viz., roasting it in a finely divided state in a reverberating furnace. To this method he gives no quarter, notwithstanding its adoption and use by the most practical, economical, and learned metallurgists of this country and Europe, during the last thirty years. In this case the condemnation rests in the fact (which he says is almost universally admitted), that from twenty to eighty per cent. of the precious metals is carried off mechanically.

That a sensible loss occurs in this way is certainly not denied; but that even this minimum of loss is reached in the most ordinary working of the reverberatory furnace is exceedingly questionable. But even were this so, scarcely any prudent manager is so ignorant of the fact, and so indifferent to the loss, he that what it may, that he does not guard against it by the use of condensing chambers, which are as common to the reverberatory furnace as the fire-bridge and grate-bars. Up to the present time no better method has been found with which to replace the reverberatory form of furnace, the objections to which are of a serious character, and mainly referable to the expense of building and keeping them in repair, the trouble and cost of working the ore properly, and the constant dread of careless and indifferent workmen, upon whom the successful roasting of the ore chiefly depends.

The chloridation method in reverberatory furnaces meets with the same disapproval on the same grounds; yet, the lamented Plattner used this form of chloridating furnace for ores which contained only two hundred grains of gold to the ton. At Mansfield, Freiburg, at Swansea, and many other localities, thousands of tons of ore are yearly roasted in such furnaces.

The Augustin process, that of Ziervogel and that of Von Patera, all invented by eminent metallurgical chemists, are successfully carried out in these condemned furnaces, and certainly their self-complacency will be somewhat disturbed, if at this late day they are to be informed that their loss of metal runs from twenty to eighty per cent.

A cheaper mode of working, and a less expensive structure, calculated to accomplish the same ends, is greatly needed, more especially for the gold sulphurets of California; and with this view, many new contrivances or processes have been offered. To these the author of the article in question next devotes himself, with a vigor which must have acquired much of its energy from the successful overthrow of all the *old* methods. He styles these, "inventions," "in the shape of furnaces," and says of them: "*But I am not aware that any of them have yet answered the expectations of the inventors.*" This is truly amiable in the writer, to throw the acknowledgment of the failures on the inventors themselves. Now, the truth is, the inventors are the very persons who insist that their inventions *do* answer their expectations, and "that's what's the matter." If it were not so, the author of the above remark would not deem it necessary to demolish the *new* as well as the old, in order to get a foot-hold for the *new* invention, which he presently commends as the effectual method.

If, however, he means that the expectations of the inventors have been disappointed, inasmuch as their plans are not successfully introduced, the same difficulty has been experienced by the inventor of that which receives his sanction as "the effectual method;" since, to the knowledge of the writer of this article, Mr. White's revolving cylinder was exhibited to the public at Newark, New Jersey, eighteen months ago, and only a few days since an advertisement for capital to erect a working furnace appeared in this journal.

The "Gold and Silver Separating Company's Furnace," and all akin to it, are now subjected to the crucible test of the metallurgical chemist, and pronounced worthless, with a phew! "*How can steam, superheated or not, be made to permeate a solid mass of ore, be the construction of the furnace what it may?*"

Let us examine very briefly the mode by which this conclusion is scientifically arrived at. This mode is mainly commended to our confidence, from the circumstance of his being requested to examine the performance of this furnace (using his own words), "in my professional capacity, the result of which may be interesting to many of your readers."(?) After stating generally the manner of treatment to which the ore was subjected, he gives several reports of the results, three of which are as follows:

"*First*—Assay of the crude sulphurets: Gold, $301.72; (this should be $391.72, evidently a typographical error;) silver, $3.76—$395.48 per ton."

"*Third.*—Assay of mass after treatment: Gold, $329.50; silver, $3.02—$332.52 per ton."

"*Sixth.*—Assay tailings, $146.12 per ton;" from which, he says, "I conclude that nearly sixteen per cent. of the precious metals was lost during the treatment; that the mineral was desulphurized to the extent of fifty-five per cent.; that fifty-two per cent. ($205.12 per ton) of the precious metals was extracted by amalgamation, and that thirty-two per cent. was left in the tailings."

These conclusions are not as a whole justified by the figures, and, in one respect, are manifestly unfair to the performance of the furnace. The desulphurization was evidently incomplete, as the metal left in the tailings showed, and this may be a radical defect of the furnace; but as to the loss during treatment, (the vital point in the *old*, and now equally so in the new), the facts do not warrant the conclusion. The assay from the crude ore must have been made from a lot or lump of ore necessarily different from that mass from which the third assay was made. The last was a *mass* mixed—the first a lump or lumps, perhaps fairly taken; but not necessarily nor probably representing the same mass as that from which the third assay was made. Hence, the difference of $62.96, or nearly sixteen per cent., would be nothing unusual in itself. But aside from this, add the fixed, positive data obtained by the extraction of $205.12 to that shown by assay, remaining in the tailings, and we have $205.12+146.12=$351.24. Now, subtracting this last sum from the assay of the crude sulphurets—$395.48=351.24=44.24, or *not quite twelve per cent. of loss*, assuming that the ore from which the first assay *was absolutely a fair representative of the mass subjected to the treatment in the furnace, and afterwards by amalgamation.* This assumption cannot be maintained, and hence the loss might be rightly set down as merely nominal, especially when it is considered that a small loss in separating the amalgam might entirely account for the seeming loss. The unfairness of the conclusion as to the loss is still more strongly shown, by observing that the aggregate of the extraction, and that left in the tailings, is a greater sum than was found in the mass by his third assay!!

The fling at furnaces of any construction, whether using steam, superheated or saturated, is not worthy of a scientific investigator. It involves the acknowledgment of ignorance, and is not supported by anything preceding or following in the article by which the unlearned in such matters can answer the question. What is meant by steam "permeating a mass of stone?" If it is meant that steam will not pass through the interstices of the mass, the suggestion is simply absurd. If it is meant, as it probably was intended, that steam cannot enter the *mass* of the single stones or lumps of ore, it betrays downright ignorance to intimate that such an effect is claimed or even desired. Limestone has been decarbonized for many years by the use of steam in conjunction with heat, and it has yet to be intimated by any metallurgical chemist that the steam enters ("permeates") each individual stone, and serves a writ of ejectment on the carbonic acid. Yet, for decomposing carbonate of lime, it is recognized as a most efficient agent. The mechanical as well as the chemical effects of steam are well understood by all men who care to investigate, with the view of arriving at facts, rather than to build up or cast down a particular invention. The point of the fling, however, does not wholly rest in the steam; the author means to disparage the attempt to desulphurize ore in the lump, since his effectual method requires it to be crushed tolerably fine. Possibly he is not aware that this has been done with ores quite as difficult to treat as the sulphurets of California.

Cinnabar contains sulphur and arsenic in considerable abundance; the ore is compact, it is put in the furnaces in the lumps—the sulphur and arsenic are mostly driven off as closely as the mercury. Carbonate of lime, as above mentioned, is dense, compact, and not combustible in the slightest degree. It is put in kilns, in large lumps, and decarbonized. The ores in question are variously composed of sulphur, arsenic and antimony, associated with the metals. These minerals are combustible—that is, they ignite—and hence the vapors must escape if proper conditions are maintained. The oxygen of the atmosphere can readily enter where such vapors escape, producing the oxidation desired.

In theory, therefore, as well as in practice, the desulphurization of ores in the lump offer less difficulty than the decarbonizing of limestone, and the desilvering of cinnabar, provided the requisite conditions can be maintained in the former case as well as in the latter. With the view of employing and maintaining these conditions, many parties are earnestly at work, and their success or failure will not be materially impeded or aided by any ill-digested remarks, however emphasized by scientific authority.

A Student of Metallurgical Chemistry.

The Problem of Gold and Silver Extraction—A General Review—No. XX.

BY PROF. L. LANSZWEERT.

[Conclusion.]

For the application of the processes in my last number, no general rule can be given, as they can be economically and practically employed only under peculiar circumstances. It is, unfortunately, the habit of the more cynical and less practical of men to ridicule all the so-called scientific processes which may be proposed, either in addresses or written papers; also, all mention of any new invention that may have been successfully carried out. Some will, no doubt, say, in reply to these remarks: We do not want to know what other people are doing; we can manage our own business very well. To such it is only necessary to say, may you grow wiser as you grow older, for to upset the conceit which prompts such a remark is, as experience teaches, quite impossible.

Those that scorn sound advice, where often most needed, are the greatest drawbacks to useful science; as some men are so vain of their worldly wisdom as to imagine that no better measures can be adopted than their own; hence they detest any hints from outsiders. Others, again, are constantly complaining, or asking for advice, yet seldom accept the remedies offered, because they cannot perceive their practical utility; while those who are more sanguine often jump at conclusions that are only to be condemned in their turn, simply because the real science of chemical metallurgy is so vaguely understood, and which never can be otherwise while the very elements which constitute each metal are erroneously described. Nevertheless, it would be far more profitable in the end for any gold and silver company to truly ascertain both the real nature of their different ores, and the best means of treating the same; as the mere quantitative analysis of any particular ore are not always sufficient proof that the mines will pay for working in the ordinary way. Therefore, even granted that any certain lode will, on analysis, yield at the rate of, say, 1 oz. per ton, and yet when opened and operated upon on a large scale, but a few grains can be collected. Now, whose fault is that? Is it that of the manager or amalgamator, who not only worked upon different ores from the assayer, but worked on very different principles, often on none, or at best on some known formula, that might be profitable to some kinds of ore, yet not for others. Hence, every sort of ore should not only be analyzed separately, but the very components of their matrices; as it often depends upon whether the general base is silica, calcia, alumina, and what kind of pyrites, or what not, may be associated. In most mines, the very dirt itself differs; as there are earths in California not found in Europe, and so are their metals as well as minerals. However, the main question, in most cases, to arrive at is, the profit and loss; then precious metals are where the ores sought for may be obtained at the least cost. Would it not be far more natural to first assort the earths to be operated upon, even if all were wished to go through different processes.

There is an old maxim that says, "If any good thing is worth doing, is it not worth while to do it well from the first?" Then why not turn every useful item to some advantage, particularly where nature supplies the raw material as cheap as dirt. Of every country possessing mineral territory, as of every person in the possession of mineral property, the duty is clearly defined. The head to the letter imposes on the community and on the individual so endowed the industry to explore and work. There is no evading the responsibility; whatever the surface cultivation, room must be accorded to the miner for his operations, otherwise the value of property in its fulness and reality cannot be reached; it will remain inert and useless to a serious extent, and science and art consequently suffer in their most important interest. It cannot be admitted that Lord Bacon was even wise in his generation, when he made the world not to "toil" for riches underground; experience, at the present time, explodes such philosophy, and with eye of staid speculation and unwavering hand points to the fact, that the balance of labor between agriculture and mechanics could not be prosperously sustained in this, or in any other country, where mine works were to be discouraged or neglected, and impressively directs the energies of every people to such, as constituting an industrial pursuit which, if perseveringly followed, leads ultimately on to fortune. Short-sighted, truly, is the policy which would restrain a section of people, even in a new settlement, from this available means of advancement. The toil of the husbandman and the tending of the feeder of the flocks and herds, are not the only inspirations of intelligence to which people in a new country should hold themselves accessible. Wine and cattle, vegetables and cereals, are, no doubt, profitable, and dot the landscape attractively, but the nomad and the culturer would ill serve the world at its actual civilized age, were there no "dark and dangerous pits and traps of mines and mining," with the long, smoking chimneys and the ponderous machinery to which they minister in their natural imposing positions over the face of the land.

After providing for the wants of animal life, the mineral resources of a settlement merit the earliest testing; and this attended to, time will be taken by the forelock to the promoting of that commerce and manufacture whereby the purposes of civilization are best served and its principles universally utilized. So self-evident a requirement in the sphere of human industry needs no lengthened discussion to prove its worth, and recommend it as materially important.

The "knights of the pick" are not mere Quixotes. They have their uses, and those uses are, at the present day, more than ever great and acknowledged facts. In a word, those errant explorers are the first rank servitors of the commonwealth. They are those who open the little rivulets whose united waters make up the great stream of gold and silver, whose constant flow is an absolute necessity to the successful prosecution of those great schemes of manufacture and commerce, which, during the past decade and a half, has so immensely advanced the material progress of the civilized world. Without their aid the smoke of our foundries and furnaces would no more be seen; the iron horse and his track would be dormant and dead in the bosom of mother earth; the thunders of our war fleets would be hushed in silence, and our merchant marine would dwindle away to pigmy proportions.

In concluding, for the present, this series of articles upon a subject so absolutely inexhaustive, I must rely upon the indulgence of the readers of these papers for any imperfections or omissions which may have been noticed. My aim has been fulfilled if I have succeeded in pointing out certain reactions which may be suggestive of further progress; or if I have been beneficial in any way in attracting attention to the necessity and importance of a more thorough and scientific treatment of the ores of the precious metals, in mining, upon the Pacific Coast.

MINERS' MASS MEETING

AT SUMMIT CITY, EXCELSIOR DISTRICT.

On the 8th instant, a large and enthusiastic meeting of the miners and citizens convened at Summit City, pursuant to a previous adjournment. J. A. Brumsey, Chairman.

Mr. Brumsey briefly stated the objects of the meeting to be to elect delegates to the Miners' State Convention, to be held at Sacramento during the winter of 1865–6. Mr. B. was followed by Mr. Thos. Hannah, who spoke of the great necessity of a general Miners Convention on this coast, and showed the benefits and advantages that would, doubtless, be derived from such an organization, and urged upon the gentlemen present the propriety of immediately taking steps to show that they fully endorsed the call for said Convention. The following resolutions were adopted:

Resolved, That we endorse the call of the Mining and Scientific Press for a Miners' State Convention, to be held at Sacramento, January 17th, 1865.

Resolved, That a delegation of five members be chosen to represent this mining district at said Convention, to be chosen as follows: Three delegates from Summit City, one from Enterprise, and one from old Man Mountain and Baltimore.

Resolved, That no general law can be made to fully meet the wants of the various mining districts in this State. But we recommend the adoption of such general laws as may be applicable to the various mining districts in the State, reserving to the districts themselves the right to make such additional regulations as may be necessary in each individual case.

Resolved, That the delegates elected from this district shall attend the Miners' State Convention, whenever said Conventions shall meet, whether under the late call of the Mining and Scientific Press, or any subsequent call that may be made.

The following-named gentlemen were elected as delegates:

J. A. Brumsey, Thos. Hanaah, J. R. Stewart, delegates from Summit City.

J. H. Fitzgerald, delegate from Enterprise.

F. W. Mitchell, delegate from Old Man Mountain and Baltimore.

The meeting then adjourned, subject to the call of the Chairman.

THE NEW BLASTING AGENCY.

NOBEL'S PATENT BLASTING OIL (Nitro-Glycerine.).

[Extracts from a work now in Press in the "Mining and Scientific Press" Job Office—by permission of the Publishers, Messrs. Bandman & Nielsen, Sole Agents for the Pacific Coast, No. 210 Front street, San Francisco.]

NITRO-GLYCERINE, and its enormous power, bave been known to Cbemists for nearly 20 years.

Its practical use, bowever, was thought impossible, because a spark produces no explosion at all, and the blow of a hammer only a local detonation. Moreover, tbe method of preparation known was found to be highly dangerous, and several serious accidents have occurred.

At present, the use of of Blasting Oil is perfectly practicable, and is rapidly supplanting Gunpowder in many Countries.

In Sweden, where it was first introduced, a Company was constituted n November, 1864, for working the invention; the sale of Nitro-Glycerine hy this Company began tbe 16tb of February, 1865; and, from that date up to tbe 26tb of August, 1865, 22,217 lbs. were sold—a quantity equivalent in its blasting effect to at least 222,170 lbs., or very nearly one-half of the wbole of Gunpowder consumed in Sweden during tbat time.

In Norway, anotber Company bas lately been constituted for tbe same purpose.

In Germany and Belgium, where the invention bas been but lately introduced, it is spreading very rapidly.

In France, wbere Gunpowder is a monopoly of the Government, tbe Emperor bas appointed a special commission for investigating tbe merits of the invention.

In England, it bas met witb the highest approbation, as will be seen by the Report of the Royal Cornwall Polytechnic Society.

Nothing, bowever, is so conclusive as a single discharge. Tbe power of the Blasting Oil is so enormous that it at once removes all doubts.

In point of economy, dead weight cannot be taken as standard: 1 lb. Blasting Oil does tbe work of 10 lbs. of Gunpowder. Tbis, bowever, would be but a trifling economy, and the rapid revolution wbich Nitro-Glycerino is effecting in blasting operations is chiefly owing to a great economy in labor, since the same power can be lodged in fewer holes, and of less diameter.

The Properties of the Patent Blasting Oil Are:

1st.—It is a ligbt yellow oily liquid.

2nd.—Its specific weight is 1.6.

3rd.—It is insoluble in water.

4th.—It cannot explode by simple contact with fire. On applying a a lucifer match, for instance, the Oil decomposes without explosion, and on removing the burning medium, the fire extinguisbes.

5th.—The explosion can only take place under particular circumstances, as mentioned below.

6tb.—The combustion of the Oil is complete, and leaves no residue.

7th.—Its explosion is much quicker than that of Gunpowder.

8th.—It can be stored for an indefinite time, without loss in weigbt or quality. At tbe ordinary temperature, neither phosphorus nor tbe metal potassium has any effect upon it.

9th.—It is a perfectly fixed Oil, without a trace of evaporation.

10tb.—It detonates wben struck with a hammer, but the explosion is only local, and reaches no further than the surface of tbe hammer. A few drops, distributed upon an anvil, produce, by various blows a corresponding number of detonations.

11tb.—It can safely bear 212° of heat (Fahrenheit), but it explodes at about 360°.

12tb.—It is poisonous, and should not he brought in contact witb tbe lips—a severe headache of a few bours' duration ensuing.

Theoretic Investigation of the Patent Blasting Oil as an Explosive Agent, in order to account for its superiority over Gunpowder.

The effect of every explosion is owing partly to tbe pressure of tbe gas developed, partly to tbe rapidity witb which the explosion takes place. Tbe latter is a very important point, particularly in fissured rocks.

On comparing Blasting Oil to Gunpowder we have to consider:

The expansion of gas.
The development of beat.
The rapidity of explosion.

1. THE EXPANSION OF GAS.

Of gunpowder, according to tbeory, only 50 per cent. is converted into gas, one volume giving 260 volumes of cold gas, deduction being made of the expansion produced by heat (Regnault). Practically, however the combustion is never so complete, and 200 volumes of cold gas are therefore in all probability above the real average result.

The chemical formula of the Blasting Oil is:

$$C^6 H^5 O^3 (NO^5)^3 \text{ containing } 0.^{18}$$

Absorbed hy the combustion are:

by $C^6 = O^{12}$
by $H^5 = O^5$ $= 0.^{17}$.,

Hence its complete combustion leaves a surplus of: $0.^{1}$

Each 100 parts of exploded Blasting Oil leaves a residue of:

20. water,
58. carbonic acid,
3.5 oxygen,
18.5 nitrogen.

100

Hence, as the specific weigbt of tbe Blasting Oil is 1.6, one volume produces:

554 volumes of steam,
469 do. " carbonic acid,
39 do. " oxygen,
236 do. " nitrogen.

1298 volumes.

2. THE EXPANSION BY HEAT.

It is difficult to determine the degree of beat produced by an exploding substance. According to theory, however, the Blasting Oil, on account of its complete combustion, ought to develop a more intense heat than Gunpowder. Practically this appears from the more intensive ligbt of the flame of gunpowder, wben sucb is mixed with a small quantity of Nitro-Glycerine. It may therefore be pretty safely assumed tbat the heat developed hy the explosion of NitroGlycerine is twice tbat generated by Gunpowder.

Consequently:

If a volume of powder gives 200 volumes of cold gas, expanded by beat 4 times=800,

1,300 volumes cold Nitro-Glycerine gas, expanded by heat 8 times produce 10,400 volumes,

So tbat Nitro-Glycerine compared witb Gunpowder possesses:

About 13 times its power wben volumes are compared, and 8 times its power for equal weigbt, tbe specific gravity of Gunpowder being taken at 1.0.

3. THE RAPIDITY OF EXPLOSION.

Practically, the effect of the Nitro-Glycerine in most cases surpasses the above figures, owing to its great quickness of explosion; this point, however, from want of a standard, cannot he solved by theory.

The Chief Advantages of Patent Blasting Oil.

1st.—*A great Economy in labor for Boring*,—its bulk being very small, as compared to its power.

The great specific gravity, the entire consumption and tbe extraordinary rapidity of the explosion of the Patent Blasting Oil, constitutes it the most powerful of all known blasting agencies.

In the present state of blasting operations, the boring of the holes is far more expensive than the Gunpowder itself—the relative cost, in hard rocks, being no less than 20 and even 30 to 1. Hence, the greater concentration of power of the Oil, and consequent economy in boring, is a matter of the highest importance.

One pound of the Patent Blasting Oil bas the same effect of at least 10 lbs. of blasting powder. The first requires but one borehole, whereas for the powder about 10 boles of the same dimensions will be required.

Thus, in open blastings,

If the dislocating of a certain quantity of rock requires:

100 feet 1½ in. boring in middling hard rock, if 3 men at $3½ per day make 5 feet, would cost	$210 00
25 lbs. powder	6 00—$216 00

It is done witb Nitro-Glycerine at the expense of.

10 feet 1½ in. boring as above	$21 00
2½ lbs. Blasting Oil	6.00— $27 00
Leaving a profit in favor of the Blasting Oil of	$189 00

Where tbe rocks are very hard, and the boring more expensive, a still greater economy results from tbe use of the Oil; but on tbe otber hand, as large quantities of rocks are dislocated hy each shot witb Nitro-Glycerine, heavy blocks are frequently obtained, and allowance sbould be made for tbeir furtber blasting.

It is perfectly practicable in Mines to bave boles of ⅝-in. diameter bored for Nitro-Glycerine, exactly wbere bores of 1½-in. diameter for Gunpowder would be placed, and to charge witb no more tban 1 cub. in. of Nitro-Glycerine.

Moreover, tbe time occupied for bard tamping is saved, and it will be found that Nitro-Glycerine always blasts to the bottom of the hole, which Gunpowder does not.

Cartridges must he used in badly-ventilated Mines, to preveut any escape of unexploded Nitro-Glycerine, it being injurious to bealth.

2nd.—The rapid progress of blasting operations, which is of tbe greatest importance, especially for Mines and Railway tunnels.

All Blastings may be performed with the Oil at least as quick again as with Gunpowder.

3rd.—*The combustion of the Oil is complete and leaves no residue*,—hence the Ore, not being blackened hy smoke, is easily traced, and in Salt Mines tbere is no refuse.

4th.—The action of the explosion is so quick that the most fissured rocks and even clay-soil are easily blasted by this medium and the effect is not lessened by any fissures, which is proved by the loose sand or water being a sufficient tamping. As powder burns much slower it is evident—and has been practically proved—that one borehole with Blasting Oil, in fissured rocks, does more execution than 20 to 30 bore-holes of equal dimensions charged with powder.

It will be found very useful for blasting loose Limestone, Conglomerates, Chalk, Clay, and similar materials, where Gunpowder is scarcely of any use.

5th.—There is a great saving in tools, and also in fuse, fewer bores being needed.

6th.—The peculiar property of the Patent Blasting Oil—not to explode by mere contact with fire—renders its carriage, storing and handling very safe.

7th.—No tamping but loose sand or water being required, the loading is attended with no risk, besides a saving of time and expense.

8th.—Blasting Oil being insoluble, water-carrying bore-holes are simply charged by pouring in the Oil, which sinks to the bottom.

9th.—The Oil is very useful for blasting the iron deposits in copper furnaces, as well as any heavy blocks of steel, iron or metal, old guns &c., which cannot be blasted by Gunpowder, but easily yields to small charges of Blasting Oil.

Of the Simple Proceedings of Blasting Under Water:

The advantage of using this Patent Oil in submarine blastings is still more glaring compared with the customary method of using powder which is liable to get wet, requiring watertight cartridges and careful tamping, while the Oil can be introduced into the bore-hole without any trouble and risk, and the water itself is served as a tamping. The annexed illustration shows how simple this process is.

The Inconveniences of the Patent Blasting Oil are:

1st.—It being somewhat poisonous, and its contact with the lips produces headache. Hence, it is very important, when used in Mines, that no unexploded part of the Blasting Oil escapes, and be diffused in the atmosphere. *To prevent this, cartridges must be used in all badly-ventilated Mines.*

The additional expense for Catridges is, however, much more than compensated by the saving in boring, and the rapid progress of the work.

2nd.—Wherever the bores are leaky, they must be tightened with wet clay. (See instructions for use).

3rd.—For all horizontal or upward bores, cartridges, of course, must be used.

INSTRUCTIONS FOR USING NOBEL'S PATENT BLASTING OIL.

Articles Required.

1ST. A Graduated Measure, containing 1 lb. of Blasting Oil, (each degree ½ an ounce.)

2ND. A Tube with a funnel mouth, through which the oil is poured in to avoid spilling.

3RD. Capsules.

4TH. Fuses.

5TH. Patent Igniters.

6TH. Cartridges for horizontal and upward bores.

Instructions For Charging Downward Bores.

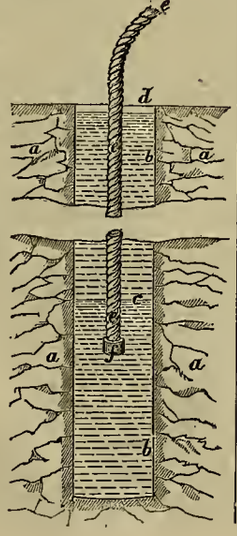
I. WITH WATER TAMPING.

Pour the oil into the bore, (a good workman will soon know the exact quantity required.)

Fill up the bore with water.

Put a Capsule on the end of a fuse, letting it down till the Capsule is immersed in the oil.

The fuse must not pass far into the oil, as it is better that the force of the explosion should be directed downward.



REFERENCES TO ENGRAVING.

a The rock.
b The bore.
c Level of Oil.
d Level of water.
e Fuse.
f Capsule.

II. WITH SAND TAMPING.

A Sand Tamping is sometimes preferred on account of its greater resistance than water.

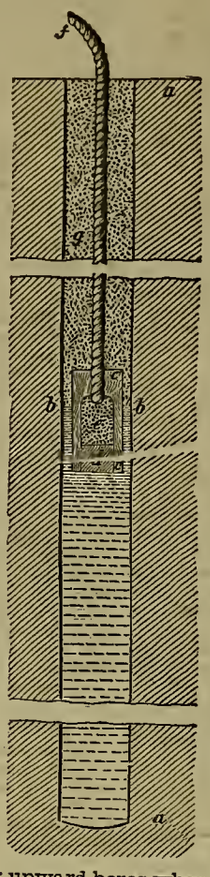
Pour the oil into the bore, connect a fuse with a patent igniter, which is to be charged with gunpowder; let them down *till the igniter is sure to swim in the oil.*

Hold the fuse in its place, and fill up the bore with dry sand.

An igniter, for instance, of ¾ inch diameter to a bore of 1 inch diameter will do.

The fuse to fit tightly in the igniter, and the hole left for it to be enlarged as may be required to suit the size of the fuse.

Care must be taken to have all doubtful bores tested with water, and if they prove to be leaky, to have them tightened with wet clay.



REFERENCES TO ENGRAVING.

a The rock.
b Level of oil.
c Patent wooden igniter.
d A cork.
e Charge of gunpowder in the igniter.
f Fuse.
g Tamping of loose sand.

Directions for Charging Horizontal or upward bores when Cartridges are required.—Fig. 3.

a Shows the rock.
b A bore.
c A cartridge.
d A conical wooden igniter, which is slightly pressed into the cartridge to keep tight.
e Charge of gunpowder in the igniter. *d.*
f A cork.
g A fuse.
h A tamping of loose sand or clay. The cartridge should be filled with oil till the igniter is sure to dip in it. In mines it is always safer to make use of cartridges, as if any oil should escape unexploded, it is diffused by the explosion in the atmosphere, which renders it delcterious.

Bores of 20 to 30-in. of depth and ⅝ to ¾-in. diameter, with cartridges 4 to 8-in. in length and ⅝ to ¾ in. diameter appear to be the best adapted for mines.

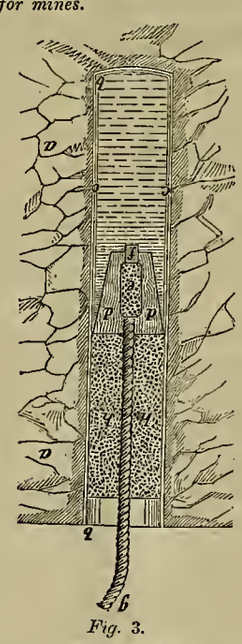


Fig. 3.

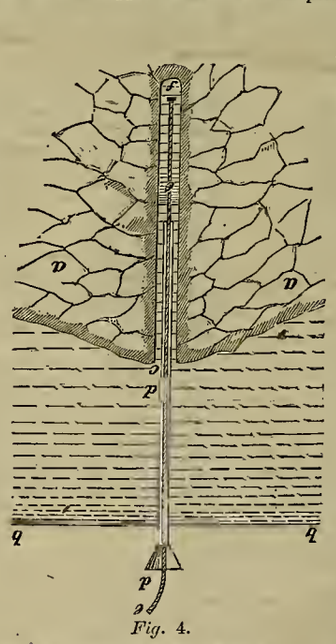

Fig. 4.

Directions for blasting under water.—Fig. 4.

a Is the rock.
b The water level.
c A bore.
d A tube with a funnel mouth. The tube, *d*, is passed down through the water into the bore, and the oil is poured down it; this done the fuse, *e*, with a capsule, *f*, is likewise let down through the tube, *d*, which latter is then removed, and the charge is ready.

Mining Summary.

CALIFORNIA.

Shasta County.—The buttery and last lot of machinery for Kelly's quartz mill, says the *Courier*, at Lower Springs, has arrived and will he running in a very short time. There is no doubt about its being a success. The Moreheads are not running their mill now, but are getting out rock that is wonderful to behold. Kelly has let a contract to sink a shaft on his claim there. It is on the old Jollic lode.

The Honeycomb mill, eight stamps, has made a clean up after a run of fourteen days. Result, $845 23. The mill is new and does not yet save all the gold. Considerable amalgam is wasted because of a "screw being loose" somewhere. Much better results are looked for in the next run. The above would be good enough in the sage brush countries, but we expect better things here in the settlements.

Horse Shoe Bend Co.—There are ten shares in this company, and so far the work has cost them $400 per share. It is estimated that $1,000 expended in the spring will put everything in A No. 1 working order—thus completing the work at a cost of $500 per share. Holders ask $2,000 per share, and we believe them cheap at that. The Horse Shoe Bend will furnish profitable labor for a thousand men next spring, summer and autumn.

The Spring Creek Mill company are hard at work again in their deep shaft, and are much encouraged. They are now getting out some splendid rock.

Plumas.—The Quincy *Union* learns that several new ledges have been discovered in the Indian Valley section during the past two weeks. The owners of the King ledge, at Mohawk, have their arastra nearly completed, and will commence crushing quartz next week. A company are at work prospecting the Union ledge in this valley. They believe it will pay to work. One or two new ledges have been struck in Long Valley. The new mill of the Crescent company is not running at present. The company is making repairs, &c. The Eureka mills have stopped crushing for the season. John Parrott, of San Francisco, has commenced suit to foreclose a mortgage on the Eureka mills, etc. Amount due, about $26,000.

A correspondent of the *Union*, "G. S. B.," is writing a series of articles, descriptive of the progress of the mining interest in Plumas county, from which it appears that Plumas contains within her borders the sources of wealth, which need but a fair amount of capital and industry to place her among the front rank counties in the State. The second article of the series gives a detailed account of mining operations in and about Onion Valley.

Tehama.—Mr. Wm. A. Sanders, says the Red Bluff *Independent*, has purchased the one-half interest of Mr. A. B. Goss, in the mining ditch, five miles above town. The other half is still owned by Major J. C. Bradley, who will have charge of the ditch, as heretofore. This is one of the best pieces of property in Tehama county, having paid in net dividends, during the past year, over 100 per cent on its entire cost.

The office of the Original Williams & Kellinger Company has been moved from Copper City to Red Bluff, and M. H. Myrick, Esq., has been elected Secretary, vice J. S. Hale, Esq., resigned. This is a great convenience to stockholders, as some of them were put to considerable trouble in forwarding assessments to Copper City. Mr. Hale retains the position of Superintendent, and is pushing the work ahead with energy. An assessment of $2.50 per share has been levied, payable on the 6th day of January. This assessment, when paid in, will nearly clear off the company's debt.

Shasta.—The Union Mining Company at Bower Springs, Shasta County, says the Red Bluff *Independent*, have struck it rich. D. B. Lyon, Esq., showed us the other day the result of one pound of rock, crushed in a hand mortar and then washed out in a pan, producing over one dollar! It is beautiful fine gold, and the rock is easily crushed. The most of the stock of this company, 2,200 feet, is owned in Red Bluff. L. A. Kelly, the Superintendent of the mine, is pushing things ahead vigorously, and we would not be surprised some of these days to see some of our friends retiring from business to live on the proceeds of this mine.

The McCloud River Marble Company has been incorporated, with a capital stock of $60,000. The quarry of the company is located on the McCloud River, about five miles from Copper City. This marble has been worked for several years by Messrs. Lee and Delong, of this place—is pure white, and can be polished equal to any marble now in use. Specimens have been sent to San Francisco, and pronounced by the marble workers there as equal to any they have in the city. A number of workmen left this morning for the works of the Company.

Yuba.—During three or four days past, says the Marysville *Appeal*, we have noticed teamsters shipping machinery from the storehouse of Knight & Gignoux for the Yuba Gold and Silver Mining Company, at Brown's Valley. It consists of an engine, pump, &c., which look as if they would do good service.

Sierra.—We condense as follows from the Downieville *Messenger*, of the 16th instant: Reports of damages by the late storm still continue to reach us. A correspondent at Scales' Diggings writes that the large reservoir of Stewart & Co. was broken, sweeping Rock Creek clean, and doing damage amounting to some ten thousand dollars to mining property.

Quartz prospects are still lively at the mines about Alleghany. The Union is still getting fine prospects. One small piece of rock about the size of a goose egg, worth about $75, was lately taken out where they are working. The annual meeting of the Fac Similie Company was held last week, and the old board of officers elected, as follows: J. H. Clute, Trustee; M. V. Clute, Treasurer; L. McKelvey, Secretary. The ledge prospects splendidly as the work goes on.

A correspondent from Table Rock says the claims there are paying better than ever—scientific mining more than offsetting the increased distance that has to be gone in order to obtain gold-bearing gravel. Interests have changed hands in the Hawkeye company, at the rate of $64,000 for the whole mine or set of claims. The Pittsburg claims probably rate as high; while the Union could not be bought for a hundred thousand dollars. There are several sets of other claims ranging from ten to thirty thousand dollars each.

A correspondent from Sawpit Flat writes that water is abundant; but the weather is too cold for much work. The Eagle company have struck some very good gravel—prospecting from $5 to $8 to the pan pretty regularly.

Alpine.—C. D. Gebbes, the well-known mining engineer, writes to the Stockton *Independent* that an innumerable number of silver-bearing lodes have been discovered in this county during the last three years. Their general width varies from ten to one hundred and fifty feet. The gangue or vein rock is generally quartz or carbonate of lime, sometimes sulphate of baryta or tremolite. That although rich ore is not found near the surface, as at Reese River, still their great size and favorable location must render them eventually very valuable. The surrounding nonmetalliferous rocks are generally trap, porphyry or slate, with granite at the base of the mountain.

The Monitor *Gazette* says of the Silver Mountain district, that work is going on steadily on the Mountain, Pennsylvania, Buckeye Nos. 1 and 2, Lady Franklin, George Washington, and Mary Francis—good headway being made on each. The IXL company have again put on a large force, and are taking out ore of fine quality for crushing. The brick obtained from the workings of five tons of Buckeye No. 1 ore, last week, has been sent below for assay, and the true returns are not yet received at the office, but the yield will undoubtedly be over $60 per ton.

Bassett & Whiteside's mill it is expected will commence crushing again next week.

Nevada.—The *Transcript* says that the proprietors of the Whigham lead (which lead we recently noticed as standing idle) have determined to resume operations at the mine, and that it will before long be ranked among the best mines in this section. For several weeks an agent of the company has been in town, making arrangements for commencing work. The mill will be put in thorough order, and several weeks will be required to clean out and free the mine of water. The rock when worked last paid well, and when the mill gets to crushing again, we believe with proper management the gold yield will be largely increased. The proprietors reside in San Francisco.

The same paper states that the Merrimac mine has been opened to a considerable depth, and although no effort was made to take out rock, the expenses of working the mine have been paid from the start, and the company has a surplus on hand. The mine is now thoroughly prospected, and opened so that hereafter the entire energy of the force at work can be directed to getting out rock. The lead is large, and will no doubt turn out large amounts of money.

According to the *Gazette*, 104 tons of rock from the Talbert ledge, lately crushed at the Oriental mill, yielded 800 ounces of amalgam, which, it is estimated, will retort five dollars an ounce. This will make the yield of the rock within a fraction of $38 per ton.

The quartz mill erected by Smith Brothers, at Rough and Ready a year or more ago, and which was run for a short time and then suspended operations, has lately been started up again with flattering prospects. The rock at first crushed yielded on the average some nine or ten dollars a ton, which was barely sufficient to pay the cost of working it. But the owners of the ledge lately opened it in another place, where the rock promises better pay, and is improving in richness and size of ledge as they go down. The mill is said to be a fine one.

Placer.—The *Stars and Stripes* of a late date, says that the people of Placer have not given so much attention to quartz mining as it seems to us their interests demand. There are many ledges in this vicinity which have been sufficiently tested to assure their paying well by a fair working process. Yet there is not a quartz mill in the neighborhood which is fit to be trusted with the crushing of a ton of rock. A good quartz mill is much needed in this district, and the parties who will erect it will find it a handsomely paying investment.

The miners of that county anticipate a serious interruption in their business this season. The railroad, it appears, runs in such a manner as to cut the ditches between Dutch Flat and Gold Run, which will necessitate a suspension of operations at the latter place during the season when water is most plenty. This will be a great hardship to the miners there, as they will lose the most of the year's work; but it is unavoidable.

Amador.—A company of miners at Cave City, says the *Register*, have laid pipes a distance of 6,500 feet, to conduct water for mining purposes to what is called Gold Hill, near Cave City. This hill is supposed to contain rich deposits of gold, but has never been worked for want of water.

The Loyal Company, whose lode is near Drytown, have erected a splendid new steam mill. They have twenty stamps in successful operation, and will soon have twenty more running.

The Richmond Company have completed their 10-stamp mill near Yeomet. They have one of Beath's Hydraulic Wheels, which, with a fall of 150 feet, runs ten stamps with forty inches of water. The company think this the cheapest power now in use, wherever there is sufficient fall.

VIRGINIA CITY AND VICINITY.

The Virginia *Enterprise* says: "At the lower level of the Savage mine, 470 feet below the surface, a fine large body of excellent paying ore is being worked at present. It is some 80 feet wide, and of unknown extent. The ore is easily mined, being soft and fine almost as sand. The Savage is looking very well indeed.

English Company on the Truckee.—The quartz mill of the English Company, on the Truckee river, will shortly begin crushing ore from Peavine District. The mill will start with twenty stamps, and will crush rock from the Bevelhymer and Great Eastern leads. The ores from these leads show well in free gold, and contain not only a large per cent. of copper, but a considerable amount of silver. The reduction is undertaken as an experiment. Should the present apparatus prove inefficient, the company will probably make arrangements next season for working by the Swansea plan, this saving all the base as well as precious metals contained in the ore operated upon. They can get all the wood they may require at $4 per cord. The company intend erecting a flouring mill on their lands, the machinery for which has already been ordered in England. They will sow, next spring, some 600 acres of wheat. Hereafter they will sow their wheat in the fall, in order, that it may have the advantage of the moisture afforded by the rains and snows of winter.

Kearsarge.—A tunnel has been run into the famous Kearsarge ledge, in Kearsarge District, tapping it at the depth of 180 feet beneath the croppings. The company are now taking out large quantities of ore of a very rich description, ready for crushing, when the mill which A. B. Paul & Co., are erecting, a mile or two from the mine, is completed, which is expected to be some time in January. The Kearsarge ledge is said to be a well defined ledge of about four feet in width, and containing a body of ore fully as rich or even richer than the Comstock. A large proportion of the mine is owned in Gold Hill and Virginia. There are many other good ledges in the district, but few of them have been developed much as yet. There will be a great deal done in the way of development the next season.

The Como Mill.—The *Enterprise* learns that the 10-stamp mill at Como, which has so long laid idle for want of rock to run it, has been purchased by the Kearsarge Company for the working of their rich mine in Kearsarge District, and is now in process of removal thither. It is an excellent mill and will do good work in its new location.

Lake District.—This District, located west of Walker Lake and bordering upon it, was located last February. But little has ever been said in regard to it, parties interested in it being desirous of keeping the public in ignorance with regard to it. The ledges are generally composed of argentiferous galena ore which assays very richly, but some of them show rich gold-bearing rock, assaying as high as $1,500 to the ton. Nearly a hundred locations have been made, and W. H. Burgess, the Recorder of the District, is now in this city, making arrangements to have a mill sent out there. The entire section of country is represented to be of surpassing richness in mines of gold and silver, but it is as yet but little prospected. There will be considerable stir made in that direction during the coming season.

A gentleman recently from Silver Peak District gives a very favorable account to the editor of the Territorial *Enterprise* of the prospects of the miners in that portion of the State. Since the last shipment of bullion—over one thousand pounds—from Martin's mill, about twenty-two hundred pounds of bullion of the same quality (worth from $1 80 to $3 per ounce) has accumulated. It was taken from ore out of the Vanderbilt lead. A vein four miles further north, and supposed to be the continuation of the Vanderbilt, has been found and located, the ore from which is said to exceed in richness anything yet found in that part of the country. The rock contains both gold and silver, free gold being found in large flakes in the seams of the vein. From all accounts this appears to be the richest of all the new districts in that direction.

HUMBOLDT.

The Arahia mines keep up, so far, to their most flattering promise of last Summer. We clip from the *Register* as follows:

The Montezuma, at a depth of 150 feet, is 6 feet wide, all mineral, and the character of the mineral improving. It has been rather coarse, for some time back, but is fair again, and will soon, at the present rate of improvement, equal its old standard—$150 to $200 the ton.

The Jersey is about the same width of the Montezuma, and several teams are kept constantly at work, hauling ore to the mill. Fox drives work like an old one. Stevenson, of the Etna mill, took in, Tuesday, 5,258 ounces bullion, result of Jersey ore. The ore averaged $45 the ton, without having the proper chemicals in the mill with which to work it. Thirty tons Jersey ore at Wahher's mill, to come in turn after a lot from the Dunderberg.

The Daisy, third in any, is after the other two at a threatening pace. The boys have a tunnel in 50 feet, keeping on the ledge. The ledge is now about three feet wide, and widening. Will run two shifts of hands next week.

Contracts let to sink shafts on the San Francisco and the Fillmore—both promising mines.

The Savannah is one of the best ledges, by upper indication, yet found in Arahia. We were expecting, since Lovelock's return, that work on it would be resumed; but he and Parker have a contract on an extension of the Montezuma, and that lets the Savannah still rest.

The Santiam (Oregon) Mines.—A gentleman of extensive mining experience, who lately visited these mines, furnishes the *Oregonian* with some interesting particulars of his visit. He says:

"There is in my judgment every indication of the ledges proving to be rich, permanent silver bearing ones. And this is the great hope of the district, that the very rich "croppings" and top rock in which gold so richly prevails, will run into veins of solid quartz having a metallic predominance of silver, and if there is no mistaking indications, this is surely the case. An increase of depth shows, upon most of the ledges worked, an increase of this class of rock. From seams, intermixed to a greater extent with gold hearing quartz, its evident tendency is to run together into solid, substantial veins of its kind. The ledges are well defined, having the smooth wall casing so indicative of permanancy and excellence, and which is rarely or never lacking in the reliable quartz vein. Aside from its future promise the present prospects of Santiam are good. Enough of rich, gold bearing rock is in sight on the ledges being worked to yield a rich return for past outlay, and to afford lucrative work for years for a mill of large capacity. The one mill there will be running in a few days, and of the returns from the rock ready for crushing there can be no doubt. The Union company have constructed a shute over one mile in length, from their tunnel to the mill. The saw mill is finished and in working order, cutting as fine quality of white pine lumber as can be obtained in the United States. Work was being prospected on the Santiam and Oregon companies' ground, and all seem full of hope for the future of the district."

The foundation of the great Mormon Temple at Salt Lake is about completed. When finished, the foundation will be one of the largest and most substantial in the world. Some of the stones weigh two tons. It is doubtful however, whether the temple will ever be completed.

Mechanical.

DANFORD'S STEAM GENERATOR.

Some months since we noticed the fact that Mr. E. Danford, of Geneva, Illinois, had invented a new steam generator, which was attracting much attention among the mechanics and manufacturers at Chicago, and which promised to work an utter revolution in the present method of generating steam for steam power. Hearing nothing further upon the subject, we had concluded that this, like a large portion of the inventions which are from time to time announced, had proven valueless when put to practical work. Such, however, appears not to have been the case. The inventor, during the summer, has submitted his invention to the examination of high scientific authorities, and to gentlemen of extensive practical experience, who have approved of the same, and who predict for it the fullest measure of success.

Among those who have examined into its merits is Mr. Horatio Allen, of the Novelty Iron Works, of New York. Mr. Allen is well known as one of the most skillful and practical mechanical engineers on the continent, and in that department stands at the head of the well known firm with which he is connected. So well satisfied has Mr. Allen become of the utility and importance of the invention, that he has become the President of a company, which has recently been organized to introduce this new steam generator to the world. The company has started with a capital of $2,100,000, and it purposes to grant the right of using the invention to manufacturers throughout the world, for a reasonable royalty upon each horse power. If the invention realizes all that is claimed for it by the inventor and other practical engineers, it will work such a revolution in steam power, that henceforth the most valuable and most dangerous of human agencies will become the most docile and beneficent. Those who are interested in scientific improvements will find it worth their while to read attentively the following description of this apparatus, which we clip from the Chicago *Republican*:

The great problem how to cheapen steam power and rob it of its terrors, seems to have been solved by an Illinois inventor. We had the pleasure, a few days since, of examining the superheated steam generator of Mr. E. Danford, of Geneva, now in practical operation at No. 90 West Lake street. There, in a space which might be covered by a medium-sized kitchen-table, is a steam engine of fifteen horse power, all complete, driving two sets of burr-stones, and grinding corn at the rate of 27½ bushels per hour. This engine is driven by steam superheated to from 500 to 600 degrees Fahrenheit. The immense power of this agent may be judged when we state that steam in the locomotive boiler at 100 pounds pressure to the square inch is only 331 degrees of temperature.

Mr. Danford's steam generator consists of a hollow cast-iron globe, 2½ inches thick, suspended in an ordinary furnace. An iron tube enters the globe at the top and is conducted down to a little below the centre where it terminates in a rose sprinkler. By means of an injection pump, about a tablespoonful of water is forced through this tube into the globe at each stroke in the form of spray. The spray does not come in contact with the sides of the generator, for before it can reach them it is expanded into superheated steam. There is no danger of explosion, for no water touches the iron to cause an explosion. The globe will sustain a pressure of 4,000 lbs to the inch. It never becomes red hot, because the steam absorbs the heat as fast as it is generated. Hence there is no danger of weakening the iron, by overheating, or burning it out.

Mr. Danford has demonstrated that there is a positive limit to the expansive power of steam, and that it is impossible as many engineers believe, to resolve it into an explosive gas. His generator has now been in use since May last, and he defies any engineer in the world to blow it up. If this be the fact the importance of his invention in a humane point of view is beyond computation.

But absolute safety is not its only recommendation. It is vastly cheaper than the old tubular boiler. A 15-horse power generator and furnace, complete, may be furnished ready for use for $200. A steam boiler of the same capacity would cost $1,500. Nor is its saving in first cost its most valuable recommendation. Twenty-five gallons of water give the same power as 75 in the ordinary boiler, and there is a saving of over 40 per cent. in fuel in its favor, while so far as appears, it will endure for an indefinite period.

New California Patents.—Among the patents issued at Washington for the week ending November 7th, we notice the following to California inventors:

A Wind-Wheel—Enrl F. Hough, of Martinez, wherein he claims the combination of an apron with the wind or storm board, by which the effectiveness of the mill is very materially increased.

A Bottle Stopper.—John Woolaver, Suisun, a full description of which was given in our issue of the 4th of November; also—

An Instrument for Opening Bottles—by the same inventor, which was also described Nov. 4th. All these patents were obtained through the Mining and Scientific Press Patent Agency.

Ammonia as a Substitute for Steam.—Quite an interest exists at present among French engineers, growing out of the late discussion of the proposition for the employment of ammoniacal gas for propelling carriages, and a patent for an ammonia engine has been taken out in the United States. The gas is condensed by cold, and the liquid ammonia thus prepared is put in a reservoir, connected by a pipe and stop-cock with a working cylinder. At the ordinary temperture of the atmoshere, the liquid expands into gas with great force, and when the cock is opened the gas rushes into the cylinder and works the piston in the same manner as steam. It is then condensed by water, for which it has a strong affinity. The quantity of liquid ammonia used in an hour as an equivalent to the power of one horse, does not exceed three gallons, weighing twenty-two pounds. The water used to absorb it is saved and the ammonia recovered and used over again. It has long been a favorite purpose of inventors to compress air so as to store up power in a form capable of easy transportation. This problem is solved by the application of liquid ammonia. Great things are expected from this invention.

A Practical Success.—We have recently given Easterle's invention for throwing carriage wheels out of railroad tracks a careful test, and are thoroughly satisfied of its practical utility. It saves a carriage from rocking by sliding and slewing around when driving in or out of the track; keeps the tire from wearing away at the outer edge, and prevents it from slipping from the felloes, and strengthens the wheel materially by preventing the splitting of the felloes. With the aid of this simple invention, buggy-riding in the streets cut up by railroad tracks, in place of being difficult and dangerous to life and limb, becomes in reality more easy and pleasant than on streets merely paved with rough cobbles. The inventor will be ready to supply all who desire with his ingenious contrivance at the shop of A. L. Batch, 118 Bush street, next week.—*Alta.*

The above is a California invention, and Mr. Esterle has applied for letters patent through the Agency of the Mining and Scientific Press.

A Mechanician.—Appold, the English mechanician, who died recently at Clifton, was so much in favor of labor-saving, that everything about his house that could be made so was automatic. The doors opened as you approached them, and closed after you had entered; water came unbidden into the basins; when the gas was lighted the shutters closed; a self-acting thermometer prevented temperature rising or falling above or below certain fixed points, and the air supplied for ventilation was both washed to cool and screened to cleanse it from blacks. Even the gates of his stable-yard opened of themselves as he drove through, and closed without slamming. Mr. Appold was a dresser of furs by a secret process, which he practiced successfully for many years, and which secured him a practical monopoly of the trade, and he always maintained that his was a far more effectual way of working an invention than any patent.

Copper Rolling in the United States. From the report of the eighth census it appears that there are seven establishments in the United States for copper rolling. These establishments employ 413 hands, and have a capital invested of $2,470,000. The cost of material consumed by them is valued at $2,537,000; the cost of labor at $157,080; and the annual value of products for the year ending 1st of June, $3,198,767.

A national exhibition of industry has been opened in Moscow. It comprehends 15,000 articles, contributed by 896 exhibitors.

Inventions will Never Cease.

Many people have doubtless exclaimed as they read the long weekly list of "claims" in our columns, "Will this tide of invention never stop?" and indeed it may have seemed to them that the time must come at last when there would literally be "nothing new under the sun," and the field of invention be tilled to exhaustion. But still each week brings forth its scores, each year numbers its thousands of new machines for lightening human toil; and the eye of the thinker, gazing upon the present and future necessities of the world, can plainly see that as long as humanity aspires to greater comfort and happiness, the flow of new devices will be constant; that as long as wise laws encourage the efforts of those heroic dreamers, the inventors, so long will the cabinets of the Patent Office bear a constantly increasing weight of their precious burden.

The spirit of invention, like every other exercise of the human mind, springs from and is developed by necessity. The red man invents no improvement in the canoe, the bow and arrow, or the rude snares he inherited from his fathers, because his wants are few; but the civilized man feels the pressure of needs of which the savage has no idea. He wants a house, and he invents machinery to shape for the purpose the rude materials around him. He wishes for tools to till the soil, and forges are kindled to produce them. Rising above mere physical desires, he sighs for something more than the dim traditions of the past, preserved only in musty manuscripts hidden in lonely cloisters, and lo! a simple combination of mechanical elements flings broadcast the light of knowledge, so that he who seeks may learn alike the truths of science or the visions of the poet, the occurrences of his own neighborhood or the faint legend of far-off lands, and thus as man advances higher in the scale of existence his wants are multiplied, and these wants produce "invention." May we not safely say that as long as man is capable of feeling a new desire or a new necessity, just so long will new devices be produced to meet them?—*American Artisan.*

New Patent Iron Doors.—Among the pateats issued recently in England, is one for iron doors, the invention of Mr. Joseph T. Harris. These doors are intended as a substitute for wood, and can be produced at almost the same cost. When fixed and painted it will be difficult to distinguished them from any kind of wooden doors, as they will be precisely the same in appearance, and will open and shut with equal facility. They are especially adapted for dwelling houses, offices, and public buildings, and, indeed for every purpose for which wooden doors are now used, their great merit being their extra security, lightness, and durability, in addition to which they can be made perfectly fire-proof, and are not liable to shrink, as is the case with wood.

The Bessemer process for the manufacture of rails is being adopted at Dowlais, and from which important results are expected. Experiments are being made with the view of trying the durability of rails coated only with Bessemer steel, and not made entirely of that metal. If this can be successfully carried out, there will be a great saving effected in price, for the cost will be but little more (perhaps £2 to £3 per ton) than for ordinary iron rails. As a proof of the superiority of Bessemer steel rails, it may be stated that on the South Eastern Railway a steel rail was laid down opposite an iron one, and the latter had to be replaced twelve times before the steel rail was worn out.—*London Mining Journal.*

Car Brakes Operated by Electricity. Mons. Achard, a French civil engineer, has invented a means of operating brakes, so that they can be immediately applied to all the wheels of a railroad train, by touching a small lever, which has the effect to break an electric current, and thereby release the brakes which are then forced against the wheels by springs. If the locomotive breaks from the train, or any coupling breaks, the electric wire will also break and the detached cars will be stopped. This invention has been recommended to the Emperor Napoleon for the fifty thousand francs, offered for the best application of the votalic pile.

The old hall in the Patent Office is soon to be fitted up and thrown open to the manufacturers of the country. Show cases will be admitted containing specimens of American manufactures in all their branches.

The Great Northern Railroad is about to introduce a system of consuming the smoke of the locomotives, and thereby at the same time manufacture the necessary gas for lighting the trains.

Two thousand six hundred tons of iron have been purchased in England, for the DesMoines Valley Road. It will be shipped from Liverpool the 1st of February, via New Orleans.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

Office of the Mining and Scientific Press—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The first question that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveatee to notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

Should you wish us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, our Washington agent has access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the actual labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to urge their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of each a matter. Our terms far such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed one inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement an some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a power of attorney, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars, is required.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be forwarded.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every application for a patent, for seventeen years...	15
On every caveat.....	10
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a reissue.....	30
On every additional patent granted on a reissue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

N. B.—We make out our own forms for applications, etc., and would respectfully inform all parties that we have on printed blank forms for sale.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventions can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the system.

San Francisco:
Saturday Morning, Dec. 23, 1865.

A State Mining Convention.

Pursuant to the request of several mining journals and representative mining individuals, the association known as the "California Mining Bureau," of San Francisco, through their Board of Trustees, have issued the following call for a Mass Convention of the miners of California:

RESOLVED, That a Mass Convention of the miners of the State of California, be and is hereby called to assemble in the city of Sacramento, on WEDNESDAY, the 17th of January, A.D. 1866, at 12 o'clock, and that any person engaged in actual mining operations shall be eligible to a seat in said Convention.

JOSEPH W. LOW, Vice-President.
J. B. WHITCOMB, Recording Secretary.
San Francisco, December 6, 1865.

OUR NEW U. S. SENATOR.—The present Legislature has signalized itself as one of pre-eminent merit, by the promptness with which it has disposed of the Senatorial question; a matter which has heretofore, whenever it has come up, been the signal for the most disgraceful scenes which have characterized our legislative history. In the selection of the HON. CORNELIUS COLE, for the responsible position of U. S. Senator to succeed Mr. McDougal, if the choice has not been that which all might wish (and such a condition of things could not be expected), there is no one who is not ready to admit that a man has been selected eminently fitted for the position, and than whom none other could be found who possesses to a greater degree the confidence and respect of the people at large. No man can say ought against his record as a patriot, and an honest and intelligent representative of California interests. He has also been elevated without resort to mere political combinations, and will go to Washington as the representative of the people and not a faction. The mining interest might have desired a man more intimately connected with its development; but they have, at all events, got a safe and honest man; and the way is now open for a full and acknowledged representative of their peculiar interest at the next election, two years from this time.

A NEW OIL DISTRICT has been discovered in Tennessee, which, it is said, bids fair to rival that of Pennsylvania. It is on Eagle Creek, near Obey river, on the Kentucky border. Oil in considerable quantity is found there, within thirty feet of the surface. Geologists and oil men are delighted with the prospects, and great numbers of capitalists and others are rushing in. Large quantities of land has been purchased or leased, and a great number of wells is being bored. The facilities for getting the oil to market are very good.

A SUITABLE PRESENT.—Persons wishing to present their friends, in the Eastern States, with an acceptable gift from California, will do well to subscribe for and send them the MINING AND SCIENTIFIC PRESS for 1866. It will be thankfully received, both for its merit as a record of California enterprise and progress, and as a weekly reminder that they are not forgotten by the absent ones from home.

THE MINES IN THE LEGISLATURE.

Our State Legislature appears to take hold of mining matters in earnest, and in a manner which evinces a thorough knowledge of the work before them and a determination to act promptly. Among the earliest acts is a prompt effort to secure our mines from being "gobbled up" by one or two railroad companies. It appears to be the evident intent of the Central Pacific Railroad Company to secure possession of valuable mineral lands and town and settlers property, by virtue of the Act of Congress granting to that Incorporation certain lands along the line of the railroad; notwithstanding said act especially reserves from said lands, thus denoted, all mineral lands and pre-emtion or homestead claims, and certain other specified grounds. In view of this fact, Senator Belden of Nevada has introduced a coucurent resolution and memorial to Congress, asking that body to take such steps as shall preserve for the benefit of the miners, all such land, not hitherto developed, as may reasonably be expected to contain mines of the precious metals; and to secure to ditch and water companies, now in active operation, all water rights and privileges now held and used by them, together with the right of way, etc; also that the improvements of all *bona fide* settlers shall be respected by said companies, to the extent of 160 acres for each occupant—or at least that provision shall be made whereby such settlers shall be allowed the privilege of perfecting their titles by paying to the railroad company the sum of $1.25 per acre for the same—the railroad to be entitled, when passing over such lands, to the ordinary right of way only.

The Governor is requested to transmit, without delay, a copy of the resolutions and memorial to our Senators and Representatives in Congress. This measure is one of the utmost importance, and the Legislature has done well to entertain it thus early and promptly. The matter was referred to the Committee on Federal Relations, with instructions to report as soon as possible.

NO SALE OF THE MINERAL LANDS.

The Committee on Mines and Mining have reported a series of resolutions to the Assembly, in opposition to the sale of the mineral lands. By the resolutions, our Representatives in Congress are instructed to use all honorable means to defeat any and all measures having for their object the sale of the mineral lands. In addition to this action, the Nevada *Transcript* very properly remarks that the miners throughout the State are almost unanimous in their opposition to any scheme for the sale of the mines, and there seems to be a strong disposition in the Legislature to act in accordance with their wishes, and protest against any action of Congress for changing the present policy of the Government in regard to mineral lands.

THE ACTUAL OCCUPANTS TO BE PROTECTED.

In the Assembly, on Monday last, Mr. Pattison, of Nevada, introduced a bill for "an act acquiring and maintaining titles to quartz claims." It was referred to the Committee on Mines. This bill is stated to be an effort to have enacted into statute law, a set of regulations similar to those adopted by the quartz miners of Grass Valley and the rest of Nevada county, and which have been generally adopted as, or made the basis of, the mining laws of other districts throughout the State. It is intended to fix the mode in which possession of a claim shall be taken and its limits marked, and how that possession shall be maintained, and what shall constitute abandonment.

CONGRESSIONAL LEGISLATION PROPOSED FOR THE OCCUPATION OF COAL LANDS AND TOWN PROPERTY.—On Monday last, Mr. Conness introduced a Bill into the U. S. Senate, to so amend the Act for the disposal of coal lands and town property, so as to allow the right to enter 160 acres on coal land to any person actually engaged in coal mining upon the premises, at the passage, and fixes the price at $20 per acre. A declaration and descriptive statement of such lands and improvements are required to be filed within one year from the passage of this Act, and proof and payment within one year thereafter. Referred to the Committee on Public Lands.

A NEW SOURCE OF PETROLEUM AT THE EAST.

Professor A. L. Fleury, a well known chemist of New York, has communicated to the *Oil News Journal*, of Pittsburgh, Penn., the particulars of a very remarkable discovery, recently made near the town of Mecca, Ohio. It appears that Mr. Calvin Adams, of Pittsburgh, having bored a shallow well near Mecca, and finding that the pumps did not yield as satisfactorily as he had anticipated, concluded to resort to a somewhat novel expedient of drainage to obtain the oil. He first sunk a central shaft to the bottom of the oleaginous deposit, some forty-five feet, then sunk several others at short intervals in a circle around the first; placing a pump in the central shaft, he connected that with each of the others by radiating drifts. He thus obtained an immense drainage area, the yield of which fully realized his expectations. The strata from which this oil was obtained consisted of about fourteen feet of a yellowish brown clayey substance, impregnated with the best quality of lubricating oil. The Professor having learned that some other parties who held claims, having the same substance, had recently erected works for extracting the oil from the rock by a process of retorting, instead of relying upon pumping, took some of the rock from Mr. Adams' claim, and found that it contained forty-five gallons of oil to the ton of rock. Of this substance the Professor says:

Placed under the microscope this oil-rock appears to be a conglomerate of clear, white quartz crystals cemented together by a wax-like (paraffin and naphtalin) substance. The odor also being of an agreeable aromatic kind, indicates the presence of a hydro-carbon. When thrown on a white hot plate, a gas is driven from the sand, taking fire with a clear white flame.

I intend to make a series of experiments, with a view to ascertain the amount of gas and light produced from a given quantity of the rock, as well as the amount of paraffin and lubricating oil.

The extraction of the oil from the sand-rock by means of steam or heated water, is not successful, small quartz crystals being carried with the oil that make it gritty. Mr. P. H. Gengembre, of Pittsburgh, is the inventor of a system that is cheap and most effective, the oil produced being pure and without grit. As much as fifty tons can be treated per day, the cost of which, in my estimation, does not exceed $200 per day. Unless *continuous* treatment is applied, the handling of twenty-seven to thirty cubic feet of sand per ton is exceedingly costly.

The sand, when deprived of all its oil, is perfectly white, and could, in my opinion, be used for making glass, and perhaps bring $6 to $8 per ton.

The Professor concludes, from a careful examination, that an almost unlimited quantity of this rock exists about Mecca, at depths varying from ten to forty feet. It can, therefore, be easily drifted and sent to the surface. He further thinks that this discovery is but the pioneer of numerous others which will constantly be made in all parts of the oil regions, and in every State where lubricating oil is found. If this expectation should be realized, it will add a new field to the great oil interests of the East, fully equal, if not of greater magnitude, even than the pumping and flowing wells hitherto opened. We shall watch with interest for further developments in this direction. The Professor says that quite a number of companies are already raising and working this oil deposit; but that they conduct their operations with much secrecy, the public knowing but little of what they are doing.

RAILROAD SURVEY.—Mr. Allardt, civil engineer, has completed his preliminary survey of the railroad line from Nevada to Colfax. The distance, as the line is run, is twenty-one miles. It is the intention of Mr. Allardt to run additional lines at some points, with the view of improving the route, if found practicable. The report will soon be published, with a map of the country through which it passes.

THE COPPEROPOLIS RAILROAD.—The contract for building and furnishing the railroad from Stockton to Copperopolis has been let to Messrs. C. A. Mayle and Richard Ivers, who are to receive $1,250,000 on turning the road over to the corporation in perfect running order.

General Rosecrans on Silver Mining in Nevada.

The Boston *Advertiser* publishes the following extract from a letter from Major General William S. Rosecrans, to a gentleman in that city. The letter is under date of September 8th, 1865, and gives a brief summary of the conclusions upon mining matters, to which the General arrived during his late visit to this State and Nevada. The article will be read with much interest by Californians:

"I will give you, and through you for the benefit of others in Boston, to whom schemes and mines shall be presented, a few general observations and principles, which, in my judgment, will or should control the silver mining, and the purchase of mines for that purpose, in this country.

"1. The number of lodes of silver ore is almost unlimited in Nevada, and no part of the State shows more lodes or richer ores than Reese River.

"2. Therefore many of great richness of ore must remain utterly without value, present or prospective, for years to come; hence, not every "large" lode, however promising the ore, should be purchased.

"3. No reduction works should be erected upon a single lode, however promising, lest the at least temporary failure of adequate supply of ore should entail losses on the company.

"4. Only those mines which have several lodes in such proximity to each other as to be easily and economically worked by the same superintendent, and with a single set of machinery for pumping water and hoisting the ore, are likely to be truly successful.

"5 This is the more important in this country where the whole surface of the country is a net work of small rich lodes, running parallel to and crossing each other in every direction and often only a few feet apart, because these spurs and cross cuts add to a company's chances of increased profit and success, and gives it, moreover, all the benefit of its own draining, shafting, tunneling, and ventilation.

"6. Whoever buys single mines—mines far apart, or high in the hills and of difficult access—must expect to lose money by it, or to hold them as "permanent investments."

"7. It ought to be known to the public that much of the mining is at present speculative, and most of the money that is made off unfortunate purchasers of mines, at high prices, goes into the hands of middle men, who are quite willing to profit by the losses of both capitalists and miners.

"Such is the feverish eagerness of the poor locators and proprietors that they hasten to give deeds in fee to some adventuring speculator, who starts for the East to sell their mines for all they can get, regardless of what becomes of the mine or the purchaser.

"But on the question of the really almost unlimited quantity of the precious metals in Nevada, and of the existence of the necessary salt, water, fuel, and other necessaries for their mining and reduction in such a way as to amply remunerate well directed capital, I entertain no doubt; nor do I think any other attentive observer would. Really, all that Bishop Simpson said about the quantity of silver in this State, fanciful as it may appear to those who have not been here, is no exaggeration.

SOMETHING NEW—AN, INK MINE (?)—A party has recently arrived at Los Angeles, from the vicinity of Buena Vista Lake and the oil springs there, having in his possession a bottle containing, according to the *News*, "a mineral substance very much resembling crude petroleum, but without any smell, and possessing all the qualities of a fine writing fluid. Several experiments were made by different persons, and all pronounced it a good quality of ink, or fluid, for writing. We dipped our pen in the fluid and wrote several lines, and could not distinguish the difference between it and the best writing fluid now in use. When first used the color is a deep, rich black, but after exposure to the air the color moderates a little, still retaining a good, and to all appearances, durable color. A company is being formed for the purpose of testing the above discovery."

THE OAKLAND NEWS came to us the past week printed on a half sheet. It was burned out a short time since, but will soon appear in its former proportions, printed upon entirely new material.

ANOTHER MINING ASSOCIATION.—A meeting of the miners of Volcano, in Amador county, was to have been held on the 16th instant, for the purpose of organizing a "Miners' Association."

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

San Francisco, Saturday Morning, December 23d, 1865.

The mining share market has exhibited considerable animation since Saturday last, and nearly all stocks are in better request at enhanced rates. In some instances a material improvement took place, imparting new life and activity to the Board, and reviving the former faith of many dealers in the future value of different claims on the Coastock.

Gould & Curry rose from $820 to $897½, receded to $850, advanced to $950, and closed at $900 asked.

The annual exhibit of the affairs of this company is regarded with favor by most of the stockholders. There have been taken from the mine the past year 47,217 tons of ore, at an expense for mining of $10.84 per ton, divided as follows: First class, 1½ tons; second class, 472 tons, and third class, 45,227 tons.

The company's mill reduced 35,684 tons, including 3,892 tons tailings, yielding in bullion $1,560,359.19, at an expense for reducing of $14.46 per ton, with an average yield of $44.26 per ton. Custom mills worked 14,229 tons, producing bullion to the amount of $749,901.67, at a cost for working of $22.83 per ton. The yield of bullion was greater by $2,464,401.15 in 1864 than in 1865. The difference in the production of the two years is owing chiefly to the sending of a greater amount of ore in the previous year to custom mills, which supplied more than four times as much bullion in 1864 than in 1865. The quantity of ore worked in the company's mill in 1864 was 12,602 tons—much of it second class, at an expense of $40 per ton, while in 1865 that mill has worked 35,684 tons, third class, at a cost of $14.40 per ton. The amount of ore extracted and worked in 1864 was 36 per cent., or 16,545 tons in excess of 1865. In 1865 the average yield of ores was $44.26. Dividends paid, 25½ per cent. of gross yield. In 1864 the average yield of ores was $73.48. Dividends paid, 40 per cent. of gross yield. In 1864 the average yield of ores were $80.40. Dividends paid, 37½ per cent. of gross yield—showing the dividends paid of the present year, in comparison with the average yield of ores, to be 6 per cent. greater than in 1864, and 20 per cent. more than in 1863. The superintendent estimates the reserves of ore on the adit level to the north of the old chamber at 3,000 tons; in the east chamber, including all the upper portion as far north as D street level, at 15,000 tons; in the north mine, to A street level, at 10,000 tons, and above the A street level at 2,000 tons—in all 30,000 tons, worth from $35 to $50 per ton, or an average of about $42. These estimates do not embrace the ore-bearing seams known to exist near the south end of the mine. None of the explorations below the lower tunnel in the 2d and 4th stations have developed a body of ore, nor was this to be expected. It is known that in the lower levels the center of the claim is filled by a large mass of porphyry, and it is only to the north and south of this that ore-bearing quartz can be found. It is believed that the porphyry will be but of moderate width on the fourth station, and that it will disappear on those still deeper. The drift to the north and south, now being run from the second station, will soon be out of this mass of porphyry, and ore may be discovered at any moment. This company is now entirely out of debt, and the cash value of the timber, wood, quicksilver, and other materials now on hand and paid for, exceeds $250,000. No further disbursements of any moment will be required for supplies until May next. During the ensuing five months, therefore, the current expenses of the company will be $50,000 less per month than they otherwise would be if these necessary supplies to the mine and mill were to be bought and paid for as required. The receipts of bullion during the first fourteen days of December from the company's mill alone, amounted to $50,000, and the aggregate expenses of the mine and mill will, it is thought, not exceed for the present $75,000 per month.

Savage has attracted considerable attention this week, and is in better request, some 240 feet changing hands, advancing from $720 to $1,040, receding to $880, rallying to $960, dropping to $825, and selling yesterday at $910@$875. Receipts of bullion thus far during the month amounted to $125,000. The Piute and Santiago mills are reducing some 60 tons of ore per day from the lower level of this mine, yielding $75@$85 per ton; and from the upper works about 90 tons daily are being taken, which yield $51 to $55 per ton.

Yellow Jacket has been active at better prices, and 150 feet were sold, advancing from $355 to $460, and dealt in yesterday at $440@$450. The northeast breast of ore on the 230-feet level show some improvement, and a prospecting shaft sunk at that point is now down 20 feet in good ore. During the week ending December 11th, 747 tons of ore were extracted, and 677 tons were reduced, yielding $20,714.65, an average of $30.35 per ton. At the company's mill 445 tons were worked.

Crown Point is in more favor, and some 50 feet were sold, receding from $435 to $410, advancing to $510, then selling at $500, and closing yesterday at $485. During the week ending December 15th, 279 tons of ore were raised from the 230 and 300-feet levels, and the different inclines from the former now connect with the latter level. The main drift from the 300-feet level has been driven 70 feet from the east stratum, and will, it is thought, soon reach the west body of ore found above.

Ophir advanced from $285 to $350, dropped to $280, rose to $335 and then sold at $320@360. A meeting of the stockholders will be held January 15th. A detailed statement of the operations of this company for the past year will be given next week.

Alpha rose from $140 to $200, receded to 180, rallied to $215, declined to $190, advanced to $225, and was dealt in yesterday at $275@$320. Within this range 110 feet were sold. Belcher has improved, and some 25 feet were sold, advancing from 140 to 170, and closing at $150.

Chollar-Potosi is in better request, and nearly 700 feet changed hands, rising from $115 to $145, and selling yesterday at $132@$150. The cross-cut in the drift on the south end of the Bajazet chimney discloses a body of ore 30 feet wide. In the old works between the 3d and 4th stations of the Chollar, a stream of ore four feet wide has been found, a portion of which yields $300@400 per ton, and the balance $40@50. During the week ending December 17th, 292 tons of ore were sent to custom mills, 231 tons were sold at $8, and 137 tons at $5. Some 14¼ tons first-class ore also was sent to Dall's mill.

Empire Mill and Mining Company met with small sales, within a range of $175@186, closing at $185 bid. During the year ending Nov. 30th, 16,000 tons of ore were reduced, yielding $485,542.49, an average of $30.34 per ton. The receipts from other sources amounted to $58,539.30, and the liabilities of the company on the 30th ult. were $14,329.17. The disbursements for the year mentioned amounted to $525,129.79, including $120,000 paid in dividends. The cash assets of the company, embracing supplies, etc., November 30th, were valued at $32,287.17. Since the 1st instant, shipments of bullion have cancelled the above liabilities, so that the company are *now* entirely out of debt.

Imperial rose from $86 to $105, receded to $95, rallied to 110, then sold at $103, and was dealt in yesterday at $96@104, some 1,100 shares in all changing hands. During the six months ending November 30th, 15,223 tons of ore were reduced, producing in the aggregate $584,803, and the receipts from other sources amounted to $17,928. The total disbursements during the same period amounted to 661,495, including $200,000 for dividends paid. The indebtedness of the company, November 30th, was $68,760, of which amount $13,864 has since been cancelled. The bullion product for November amounted to $66,584, from 2,930 tons of ore, an average of $22½ per ton. Receipts thus far the current month are about up to the average of last month.

Hale & Norcross rose from $95 to $250, and closed at $270. An assessment of $50 per foot was levied December 13th. Confidence rose from $15 to $27, dropped to $26, and sold yesterday at $24. An assessment of $25 per share was levied December 19th. Overman rose from $30 (assessment delinquent) to $50, and sold yesterday at $50. Bullion advanced from $10 to $23, then sold at $25, and closed at $25.

The aggregate sales of Stocks, since Saturday last inclusive, amounted to $850,545.

Montana.—The U. S. *Times* says that the Secretary of the Treasury has received a letter from the Collector of Internal Revenue for Montana Territory, stating that the product of bullion in Montana for the year 1865 will be upwards of $18,000,000. Rather a heavy figure, we should judge.

*Those marked with an asterisk (*) are advertised in this journal.

The Moss Mine.—A party of fifteen first-class miners, from the Gould & Curry mine, of Washoe, under charge of Mr. Stroag, late Superintendent of that mine, has gone to the Colorado to open up the famous Moss ledge, which has lately been purchased, through the agency of Mr. Strong, by a wealthy New York company.

Copper Ore from the Union Mine.—The shipments of copper ore from the Union mine, at Copperopolis, were 124¼ tons for the week ending December 7th; for the week ending December 14th, 432½ tons were shipped.

It is stated that at the funeral of the late Lord Palmerston, the chief mourner threw a number of diamond and gold rings into the grave, when the words "dust to dust, ashes to ashes," were pronounced by the Dean of Westminster.

It is authoritatively announced that a third line of rails will be laid on the Great Western Railway of Canada. Cost estimated at $700,000.

There is a glass pump on exhibition in Worcester, Mass., warranted not to freeze up.

EUROPEAN

METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

To Mining Companies.

A GENTLEMAN OF MUCH EXPERIENCE AS A MINING Superintendent, in England, Spain, and on the Pacific coast, and one intimately acquainted with every department of mining, and with nearly every class of minerals, is desirous of securing a position as Superintendent of some mining operation in California or Nevada. The applicant was for four years Superintendent of the New Almaden Quicksilver Mine, in this State. The best of reference given on application at this office.

San Francisco, Oct. 12, 1865 5v11tf

MINING BLANKS

For Sale

AT THE

OFFICE OF THE MINING AND SCIENTIFIC PRESS

No. 505 Clay Street, corner of Sansome.

Blanks for Mining Companies, Secretaries, Shareholders and others, always on hand, or printed to order, at our office.

Among others are those of the following forms:

Shareholder's Proxy.

Know all men by these presents, that I, ... do hereby constitute and appoint ..... my attorney and agent, for me and in my name, to vote as my proxy, at a meeting of the ..... Mining Company, to be held ..... 186 , according to the number of votes that I should be entitled to cast were I there personally present.

In witness whereof I have this day hereunto set my hand and seal. .....[Seal]

Dated 186

Assessment Notice.

..... Company

.....

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the ..th day of ....., 186 , an Assessment of .....per share was levied upon the Capital Stock of said Company, payable on the ..th day of .....186 , in United States gold and silver coin to the Secretary.

Any stock upon which said Assessment shall remain unpaid on Saturday, the ..th day of ....., 186 , will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on ....., the ..th day of ....., 186 , to pay the delinquent Assessment, together with the costs of advertising and expenses of the sale. By order of the Board of Trustees.

..... Secretary.

Office.....

NOTICE.—There are delinquent, upon the following described Stock, on account of assessment levied on the ..th day of ..... 186 , the several amounts set opposite the names of the respective shareholders as follows, to wit:

Names.	No. Certificate.	No. Shares.	Amount.
Theophilus Thistle	23	1	$140 00
Peter Pipe	2	3	30 00

And in accordance with law and an order of the Board of Trustees, made on the ..th day of ..... , 186 , so many shares of each parcel of said stock as may be necessary, will be sold at the.....

....., on ....., the ..th day of....., 186 , at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

..... Secretary.

Office.....

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled, by mail or express, as may be desired.

To Publishers.

An editor and practical printer, of good experience and recommendation, desires a situation and will accept a moderate salary on trial. Address this office.

BLED TO DEATH BY CUTTING A WART.—A. J. Barrington employed in Belcher's saloon, Philadelphia, bled to death from cuiting a wart off one of his feet. He had attempted to stop the hemmorrhage by tying a piece of cord around his leg but could not, and when found was dead, lying on his face on the floor. Deceased was over fifty years old.

PYRRHO, the head of a sect called after his name, asserted that there was no differeace betweea life and death. Some person, in ridicule of this position, asked Pyrrho why he did not die, as life and death were the same. "For that very reason," replied he, "because there is no differenco betweea the two states."

PHILADELPHIA AGENCY,

Parties wishing to subscribe or advertise in the MINING AND SCIENTIFIC PRESS can be accommodated by calling upon our Agent, MR. TURNER HAMILTON, at the Assembly Building, 106 South Tenth street, Philadelphia, Pa., where samp copies of our publications can always be found.

Traveling Agent.

MR. ROBERT LATTIMORE is now on a canvassing tour for the PRESS through Butte, Colusi, Tehama, Shasta, and Siskiyou counties, and we recommend him to the favorable consideration of our friends.

To Blacksmiths.

An excellent, strong lad, from the interior, 17 years of age, desires to learn the Blacksmith's trade. His parents wish him to engage with a reputable firm, and learn his business thoroughly. Address, or inquire at the office of the MINING AND SCIENTIFIC PRESS. 2v11tf

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

25v9q JOHN LOCHHEAD, Practical Engineer

THE owners of the Macedonian mine, which is located in San Bernardino county, in the neighborhood of Fort Mohave, intend to test its value. Mr. Ensign Bennett and others are *en route* to that region, to make the necessary arrangements. The company is organized in Buffalo, New York. So says the Wilmington *Journal*.

FOXES AND DEERS.—A party started out from Nevada, on a "fox hunt," on the 16th inst. Foxes are said to be abundant there. The party had ten or a dozen of the best hounds which could be obtained in the State. Quite a number of deer have also been seen quite recently in the neighborhood of Nevada, and along the ridge down as low as Penn Valley.

POSTPONEMENTS.—We would again call the attention of Secretaries to a certain point of the mining law, too commonly overlooked, viz: The requirement that all postponements must be added previous to the expiration of the regular publication of assessment or sale notices.

OUR NEW YORK AGENCY.

Mr. GEO. M. NEWTON is our authorized agent in New York City, and will receive advertisements and subscriptions for the MINING AND SCIENTIFIC PRESS at regular rates. Sample copies of our weekly and monthly issues can be procured by calling upon him, at the office of the "STOCKHOLDER," **No. 72 William street.**

What "They Say" of the Mining and Scientific Press.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the PRESS, and would like to have a full file.—[Napa Reporter.

The public should support the enterprise of the MINING PRESS, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

Under the management of Messrs. Dewey & Co., the PRESS has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

A good paper for this country.—[Humboldt Register, Na.

Those who would have a good paper of this character, should subscribe now.—[Marysville Appeal.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will be second to no scientific record now published on this continent.—[Los Angeles News.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The PRESS fills the bill.—[Reese River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

Interesting and important to miners and Mountain men. [Butte Record.

The publishers intend to make it the "Scientific American" of the Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information to the pick and shovel fraternity.—[Trinity Journal.

Should be taken by every man owning "feet" [and brains] in this State.—[Beacon.

In no other ten journals can the reader find the same amount of reliable mining news as in the PRESS.—[Contra Costa Gazette.

Every stockholder in different mines will find it will pay to take and read this mining journal.—[Contra Costa Gazette.

The PRESS is to the Pacific Coast what the "Scientific American" is on the Atlantic. It deserves its success.—[Aurora Daily Times.

It is fully up to the times, and furnishes the latest mining improvements and intelligence.—[Calaveras Chronicle.

Every miner should subscribe for the PRESS.—[Calaveras Chronicle.

It presents a channel through which all mining notices may be cheaply consolidated into one sheet for the convenience of all stockholders.—[Mountain Messenger.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics. [Placer Herald.

MINERS

Who wish to erect Quartz Mills, Concentrating or Smelting Works, will find it to their interest to consult the under. signed, as to the best and cheapest mode of Reducing Ores. Being acquainted with all the modern improvements of Europe and America, in Mining, Machinery and Metallurgy, I undertake the erection of any kind of Works, and warrant their successful operation.

Gold, Silver and Copper Ores bought in any quantity.

Assay of Ores made by a new Fire Process in half the usual time, and at half price.

Apply to **J. MOSHEIMER,**
23v11qy 423 Washington street, San Francisco.

Book Printing should be considered and treated as one of the higher branches of the "Art of Arts," and its execution entrusted only to experienced and intelligent workmen. Strict attention will be given to all orders for BOOK AND PAMPHLET PRINTING entrusted to the Mining and Scientific Press Job Office.

MINING IN NEW ZEALAND.—The product of the New Zealand west coast gold fields to the 1st of August was 73,000 ounces, worth $1,440,000, and 1,500 ounces more than for the same time in the previous year.

MOSHEIMER'S CONCENTRATOR

RECEIVED THE FIRST PREMIUM

From the ROYAL POLYTECHNIC SOCIETY, in Cornwall, and was highly recommended by the Commissioners as the most Simple and Effective Concentrator for all kinds of Ores.

Every Quartz Mill ought to have them, as they not only save Gold and Silver, but also the Quicksilver and Sulphurets, without extra labor. They can be built entirely of wood at the mine, and will separate more perfectly in one operation, than any other Concentrator in use. Apply to **J. MOSHEIMER,**

23v11qy 423 Washington street.

New Mining Advertisements.

Continued Mining Advertisements will be found under another head

Diana Gold and Silver Mining Company, Lander County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of December, 1865, an assessment of ten dollars ($10) per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, 402 Front street, San Francisco.

Any stock upon which said assessment shall remain unpaid before Saturday, the 20th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 6th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. The said assessment being levied to pay off balances of indebtedness for improvements recently made at the mine. By order of the Board of Trustees.

N. C. FASSETT, Secretary.
Office, 402 Front street, San Francisco. dec23

Hornet Gold and Silver Mining Company, Lander County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 21st day of December, 1865, an assessment of one dollar ($1) per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, 402 Front street.

Any stock upon which said assessment shall remain unpaid before Saturday, the 20th day of January, 1866, will be advertised as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 6th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

N. C. FASSETT, Secretary.
Office, 402 Front street, San Francisco. dec23

Hanscom Copper Mining Company, Low Divide District, Del Norte county, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of December, 1865, an assessment of fifteen cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 20th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 3d day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

W. L. GETCHELL, Secretary.
Office, No. 19 First street, San Francisco, Cal. dec23

And in accordance with law, and an order of the Board of Trustees, made on the 5th day of December, 1865, so many shares of each parcel of said stock as may be necessary, will be sold at auction, at the office of the Company, by Jones & Bendixen, auctioneers, on the 8th day of January, 1866, at the hour of 1 o'clock P. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

N. C FASSETT, Secretary.

Office, 402 Front street, San Francisco. dec9

Nevada Gold and Silver Mining Company, Lander County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 14th day of December, 1865, an assessment of one dollar and fifty cents ($1.50) per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, 402 Front street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 29th day of January, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

N. C. FASSETT, Secretary.

Office, 402 Front street, San Francisco. dec15

Orleans Quicksilver Mining Company—Location: Lake County, California.

Notice is hereby given, that the Annual Meeting of the stockholders of the Orleans Quicksilver Mining Company, will be held at the office of J. M. Buffington, No. 10 Government House, corner Sansome and Washington streets, San Francisco, on Saturday, December 30th, 1865, at 3 o'clock, P. M., for the election of Trustees, and such other business as may be presented.

CHAS. ROHRLE, President.

San Francisco, Nov. 30, 1865. dec2

Paragon Petroleum Company—Location of Works: Mattole District, Humboldt County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 4th day of December, 1865, an assessment of twenty-five cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, No. 206 Jackson street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 6th day of January, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Friday, the 26th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

M. J. McMANUS, Secretary.

Office. No. 206 Jackson street, San Francisco. dec9

Siempre Viva Silver Mining Company, Zaragora District, Sinaloa, Mexico.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 2d day of December, 1865, an assessment of two dollars and fifty cents ($2.50) per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, 318 California street, up stairs.

Any stock upon which said assessment shall remain unpaid on Saturday, the 5th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 20th day of January, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

JOHN F. LOUISE, Secretary.

Office, No. 318 California street (up stairs), San Francisco, California dec2

United States Gold and Silver Mining Company.—Mine located in Ravenswood and Santa Fe Districts, Lander County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 23d day of November, 1865, an assessment of one dollar and five cents ($1.05) per share was levied upon the capital stock of said company, payable on the 25th day of November, 1865, in United States gold coin, to the Secretary, at his office.

Any stock upon which said assessment shall remain unpaid on Saturday, the 30th day of December, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 15th day of January, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

T. L. BIBBINS, Secretary.

Office, 618 Merchant street, San Francisco, Cal.

Shareholders who have paid the former assessments, or who have advanced money to the Company, will be credited for the same upon this assessment.

dec2 T. L. BIBBINS.

Notice.—The Annual Meeting of the Stockholders of the UNITED STATES MINING COMPANY, will be held at the Office of the Company, on Monday, December 25th, 1865, at 3 o'clock, P. M.

J. M. BUFFINGTON, Secretary.

San Francisco, November 25th, 1865. no25

Wide West Gold and Silver Mining Company, Silver Mountain District, Alpine County, Cal.

And in accordance with law, and an order of the Board of Trustees, made on the 6th day of November, 1865, so many shares of each parcel of said stock as may be necessary, will be sold at auction, by Olney & Co., at the office of the Company, No. 7 Stevenson Block, San Francisco, Cal., on the 23d day of December, 1865, at 12 o'clock M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

M. G. ELMORE, Secretary.

Office, No. 7 Stevenson Block, corner Montgomery and California streets, San Francisco. dec9

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can send all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements at their earliest convenience. New advertisements should be sent in as early as possible.

SELLING THE HERMITAGE.—A bill has been introduced in the Tennessee Legislature to sell all the Hermitage ground, now belonging to the State, except two acres around the grave of the immortal Jackson.

GENERAL GRANT'S RANK.—Generals Washington and Grant are the only two full Lieutenant-Generals the country ever had—General Scott only holding the title by brevet.

FEMALE NOTABLES.—The widows of Daniel Webster and John J. Crittenden are now both residents of New York city. Mrs. Crittenden has recently removed from Kentucky, and is living on Lexington avenue, in the enjoyment of very good health.

SOME one has said of those who die young, that they are like the lambs whom Alpine shepherds bear in their arms to higher greener pastures, that the flocks may follow.

MEN often attempt, by the light of reason, to discover the mysteries of eternity. They might as well hold up a candle to see the stars.

Economy in Advertising.—The MINING AND SCIENTIFIC PRESS is the best and most ECONOMICAL mining advertising medium in this city. Our terms are less than ONE HALF the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The PRESS contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

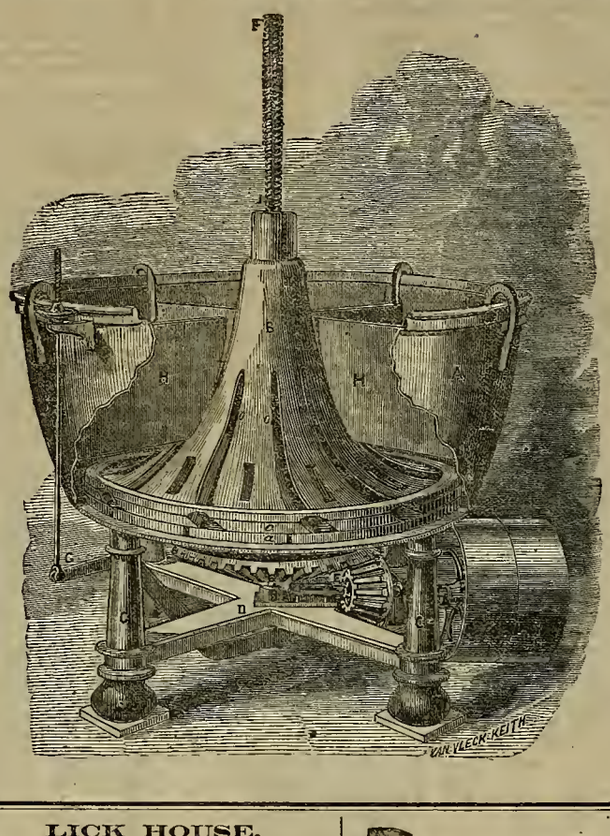
Deserved Testimonial.

GRIZZLY FLAT, Oct. 18, 1865.

MESSRS. HUNGERFORD & HENDY—*Gentlemen:* We have run your Concentrator for several days past, in our 5-stamp Mill, and, as far as can be ascertained at present, it is a perfect success. When running at the rate of from two hundred and ten to two hundred and twenty-five revolutions per minute, we have lost neither quicksilver nor sulphurets. Formerly, when using copperplate riffles and blankets, we found that in spite of the utmost precaution, quicksilver would escape over them all. Wishing you all success, we remain Your obedient servants,

E. A. BIGLER.
S. F. DAVIS.

17v11qy



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings,

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

WHEELER & RANDALL.

SAN FRANCISCO, June 13, 1865.

QUARTZ OPERATOR'S HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,

Authors and Publishers.

BOUND IN CLOTH—144 PAGES, DUODECIMO.

THE QUARTZ OPERATOR'S HAND BOOK is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs. W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable QUARTZ MINER'S HAND BOOK.

The Table of Contents of this book will be found on page 415 of the MINING AND SCIENTIFIC PRESS of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11

HENDY'S IMPROVED BLOW-PIPE.

This Convenient Helpmeet

—TO THE—

ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the PRESS of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth-piece and the pipe, enabling the blower to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continuous current of air is forced from the nozzle of the pipe by the mere contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

Price, Complete.....$5.00.

At the Lowest Market Price.

JAMES R. DOYLE,

20v10-3m Pacific Coal Yard, 413 and 415 Pacific street.

PAPER PRICES.—As an instance of the cumulative operation of paper prices, we may mention the late riots in the coal mines of Pennsylvania. The wages of the miners rose with the price of gold, until they got seven dollars per day. With the fall in gold it became necessary to reduce the wages. Seven dollars a day had been paid laborers in the mines, and now, in view of the stringency of the market, it was proposed to reduce the rate to six dollars. The result was a bloody riot. Finally, the military had to be called out to put a stop to the disturbances, and at last accounts it was thought that the danger was over.

THE Amador *Dispatch* says that county bids fair to become, at no distant day, one of the greatest wine-producing districts in the State

Removal.

The Office of the MINING AND SCIENTIFIC PRESS has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our forme location), where we may now be found, with more commodious apartments and an extensive JOB PRINTING OFFICE.

San Francisco, April 10th, 1865.

Oakland Water-Cure.

APRIL 1ST, 1864, WE OPENED A HYGIENIC BOARDING House and Ladies' Health Institute in Oakland. The great advantage we have experienced since that time, in the treatment and cure of all those diseases peculiar to females, as well as those common to all, over that of San Francisco, induced us to give up the treatment of gentlemen in the city. We have accordingly removed our entire Bathing, Electro-magnetic, and Gymnastic Apparatus, which we used especially in the treatment of males, to our Health Institute across the Bay, and have found, after a trial of seven months, that gentlemen as well as lady patients recover, at our Fountain Farm Cure, one-third faster than in the city of San Francisco. The climate here is the most even and bracing to be found in the State. The grounds command a view unsurpassed in the world. The Institution is furnished with an abundance of pure, soft water, from numerous springs; and we now offer to Ministers, Teachers, Lawyers, Miners, Merchants, Mechanics, Farmers, and all other worthy persons, who desire to try the advantage of the only *rational* system of medicine, the hospitalities of our Hygienic Home and Cure. Young men who have become debilitated or lost their health by excessive toil, exposure, or enervating habits, contracted through ignorance of Physical Laws, may with us find more of the encouragements they need, and means that will restore them to health, than elsewhere in California.

We claim for Water-Cure and Hygienic Medication superior advantages over all systems of drug medication in the cure of all disorders, whether acute or chronic; that it is followed by none of those debilitating diseases, such as Piles, Chronic Diarrhœa, Torpid Liver, Constipation, intense Nervousness, Neuralgia, etc., nor those terrible Secondary Diseases, known as Varicose Swelling of the Veins, Necrosis, or Decaying of the Bones, Ulceration of the Limbs, Mercurial Rheumatism, Urethal Strictures, etc., which we well know result from the free use of mercury and other metallic drugs, together with stimulants and vegetable poisons given to overcome acute diseases.

The **Oakland Water-Cure and Eye Infirmary** is by far the most complete in its facilities for the cure of all diseases commonly treated in all Eastern Water Cures of any like establishment on this coast, and the only one in California conducted according to the Theory and Practice of the New York Hydropathic College. We use all forms of Warm and Cold Wet Sheet Packs, the Electro-Chemical Bath, Steam Baths, Improved Sitz Baths, Douch Baths, a Patent Spray Bath, and Magic Baths. The last named was instituted by Dr. Smith with special reference to the cure of those diseases peculiar to miners, namely: Rheumatism, Inflammatory or Chronic, Stiff Joints, Paralysis, Mercurial, Lead, and Oak Poisonings. It is a sure cure for Ague and Fever. It aids more than any other Bath we have yet used in eradicating all kinds of drugs and infectious poisons, and in the cure of all disorders induced by exposure to dampness and water, foul air, absence of light and electricity, retorting metals, the malaria of rivers and low marshy grounds. Where there was a fair constitution left, even when drugs had been applied for months and years without a cure, we have, in the past seven years, treated successfully the following diseases: Chronic, Inflammatory and Mercurial Rheumatism; Paralysis; Lung, Bronchial and Catarrhal Affections; Diseases of the Heart, Kidneys, Liver; Dyspepsia, Constipation, Erysipelas, Scrofula, Piles, Inflammation of the Bowels, Chronic and Acute Diarrhœa, and all diseases and weaknesses peculiar to male and females. No physician in California is so favorably situated to furnish so many home comforts and hygienic conditions that are indispensable to the speedy recovery of nervous and chronic invalids. We have the only truly healthful boarding place in the State for men, women and children, with plenty of saddle and carriage horses for the use of patients and boarders.

To that class of Diseases and Weaknesses peculiar to females, and the medication that Hydropathic or Hygienic physicians employ in their cure, do we invite the special attention of patients and their friends. The ease and rapidity with which females suffering from general or special debility, recover in the bracing climate of the Bay, under Hygienic Medication, together with the universal success that has attended the treatment of females at Dr. Smith's Institutions, (both in Sacramento and San Francisco) has induced us to make this class of human afflictions a specialty of our Institution. We have treated (mostly in the cure), over 300 females, several of whom had been "bedridden" for months and years, and have been decidedly benefited, and with but few exceptions, returned to their homes in from two to six weeks, so far recovered as no longer to need a physician. We have never yet learned of a single instance of a relapse into their former condition.

There is one female in twenty that has been suffering from nervous debility or diseases peculiar to her sex, that cannot be permanently cured by spending from four to six weeks at our Cure, and at the mere cost of $100. This statement we make in confidence, from an experience of the last seven years. From the many who have been treated at our Cure, we have yet to learn of a single regret from husband or wife of the time or means they have expended in Hygienic Medication.

NEW YORK, Aug. 1, 1853.

To all whom it may concern:

This certifies, that Dr. Barlow J. Smith is a graduate of the New York Hygieo-Therapeutic College, which College has a regular Charter from the Legislature of the State of New York, and is authorized to grant Diplomas, conferring on its students all and the same privileges and immunities in relation to the practice of the Healing Art, that are conferred by the Diplomas of any Allopathic or other Medical College in the country.

Dr. Smith has also devoted much attention to Phrenology, especially in its connection with Physiology and Pathology, a portion of the time under the instruction of Fowler & Wells, of this city, and has labored successfully as a teacher and lecturer on these subjects.

R. T. TRALL,
Principal New York Hygieo-Therapeutic College.

To all whom it may concern:

I have known Dr Barlow J. Smith, both in our office as a Student, and a practical Phrenologist in the country, and from what I know of him I can cheerfully recommend him as an honest, faithful delineator of character, and as such can cheerfully recommend him to the public.

For the good of Science.
L. N. FOWLER, 308 Broadway, N. Y.

Dr. Smith spends a part of each day in San Francisco, attending to family practice and to Phrenological and Physiological examinations at his office, Room 13 Armory Hall, up stairs, corner Montgomery and Sacramento streets. Office hours from 11 A. M. to 2 P. M. Circulars sent on application. Address,

BARLOW J. SMITH, M. D.,
20v11tf San Francisco, Box 473.

Machinery.

HUNTER'S
PREMIUM
CONCENTRATOR, AMALGAMATOR
AND
SEPARATOR,

Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERation daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 20 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste free gold and amalgam is amalgamated on the copper plates; no trace of ground mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, when with the greatest IRREGULARITY OF SPEED the best of results were given.

5th. There is no clogging or stopping to clean out the sulphurets and sand; consequently no waste from any inattention on the part of the attendant.

6th. In exhibiting the working of the machine (it is not run empty), all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see fit to test the machine with.

Give it a trial, and satisfaction is guaranteed. All orders and any information required, address,

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15v11-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD'S
Separator & Amalgamator

Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jeffersonian Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada City; Crall's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works and San Francisco Foundry, San Francisco, and at Heugh & Thoiu's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8-6df

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
— AND —
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th.

(Illustrated in the Mining and Scientific Press, April 9th, 864.) HEPBURN & PETERSON.

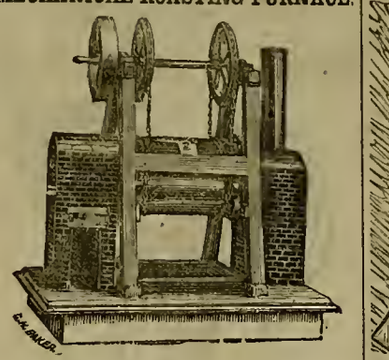
HUNT'S PATENT
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 23 Second street, San Francisco.

The Mechanics' Institute
AWARDED A
PREMIUM SILVER MEDAL
TO BRUCKNER'S
MECHANICAL ROASTING FURNACE.



Parties wishing to erect such Furnaces, are requested to leave their orders with

T. KALLENBERG,
12v11 416 Market street, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.
ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

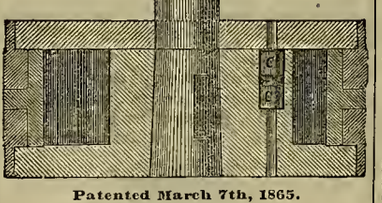
Stevens' Pressure Packing.



Patented March 7th, 1865.

Pressure Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight.

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which now have this packing in use—some of which have been running from three to twelve months without being opened, or showing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Alameda Railroad, or at the VULCAN IRON WORKS, where they can be seen, at any time, in course of construction.

10df **ANDREW STEVENS.**

SALMON'S
PROPELLOR AMALGAMATOR
— AND —
Challenge Settler

Has been in use and thoroughly tested, both in California and Nevada, with entire satisfaction to all parties concerned. These Machines are

Made entirely different from any others,

And with the same power will grind, amalgamate, settle and separate, more gold and silver ore than any others now in use. Manufactured at the SAN FRANCISCO FOUNDRY, where Machines can be seen in operation. Address

STOW'S
PATENT CHAMBER DRILL.

The greatest Labor-saving Machine ever invented for Quartz Mining. By using the Drill in shafts, tunnels, and all other rock blasting, three-fourths of the labor and over one-half of the powder will be saved. The Drill makes a chamber directly at the bottom of the hole, at any depth you wish, six times the area of the original hole. In all kinds of rock, in less time than a man can drill a 1¾ hole two inches deep. Requiring no tamping, it will be impossible to have a premature blast.

AT THE STATE FAIR held in Sacramento, September, 1865, a Committee, after examining both the Linscott's and Stow's Chamber Drills, reported as follows:

We, the undersigned, Committee on Mining Tools, do award to Henry M. Stow, of San Francisco, the FIRST PREMIUM for the best Chamber Drill for blasting rock, for the following reasons:

1st. For simplicity of construction.
2d. For durability of drill.
3d. For strength of drill.

The above Drills will be sent to any part of the State for $30, with one set of Cutters or Chisels that will chamber from 75 to 150 holes. Extra Chisels furnished at $2 50 per set.

The Drill may be seen at Mr. BUFFINGTON'S Office, No. Government Block, corner Sansome and Washington streets, and at No. 511 Market street.

Drills will be delivered to any part of this State free of expense to the purchaser. Any information desired, or orders for Drills, address

STOW & COLLINS,
San Francisco

Oil Wells! Oil Wells!!

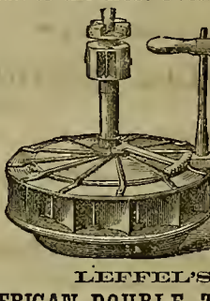
I received at the last STATE FAIR a special Premium for the best Expanding Drill for boring oil wells. The above Drill will bore the hole from ¾ inch to 2 inches larger than the inside of the pipe or tubing of the well, if desired, making the bore perfectly straight and round. The Drills can be attached to and work with any common drill at an expense of from $25 to $50. I will furnish all machinery for boring, or will take contracts for boring wells, and furnish steam engines and all tools required. Address,

HENRY M. STOW,
14v11 San Francisco.

WATER WHEELS!

Equal to the Best Overshot Whee

POWER PLEDGED



IN EXISTENCE.

LEFFEL'S
AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 30½. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds, will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
At Vulcan Iron Works, office 137 and 139 First street, San Francisco. 4v11tf

VARNEY'S
PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setters made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setters for themselves, at the **PACIFIC FOUNDRY,**
1v1 San Francisco.

MITCHELL'S
COMBINED
FAUCET AND MEASURE.

This is one of the most useful inventions of the day, and is destined to go into universal use on this coast, as it has in the Eastern States.

The invention consists of a combined Faucet and Measure, so arranged that the liquid contents of any cask or other vessel can be drawn and accurately measured without the use of measures or funnels other than such as are embraced in the Faucet itself. While it obviates altogether the use of measures, it operates much more perfectly than the old method of drawing and measuring such liquids as have a tendency to foam up when drawn, as coal oil, linseed oil, etc.

The Proprietor has made arrangements with GALLAGHER, WEED & WHITE, of the California Brass Foundry of this city, for the manufacture of this Faucet, and is prepared to furnish the article or sell territories. Here is a chance for men with small capital to invest in a good business.

Residence, 320 Taylor street, near O'Farrell street.

D. C. MITCHELL, Prop'r.
San Francisco, Aug. 22d, 1865. 10v11-3m

A Nice Thing.—The Mariposa *Gazette* says that Mr. Moore, of Idaho City, formerly of Mariposa, has disposed of a portion of his interest in a quartz vein in that Territory for the nice little sum of $800,000. The "interest" spoken of we suppose to be a half interest in the famous "Morning Star Ledge."

Oil Refinery in Los Angeles County.—The citizens of Los Angeles, according to the *News*, are now burning oil from the refinery of the Philadelphia Oil Company, on the Camulas Rancho. The Company is prepared to furnish from their well and refinery all that may be needed to supply the demand.

Hanscom Copper Mine.—The owners of this mine seem determined to improve the fine prospects they have, for developing, in Del Norte county, one of the richest copper lodes on this coast. A new election of officers has taken place, which will be reported in our list in the first issue of next month.

J. B. Cone, Business Agency.—Makes private sales of Property and Business Places of every description, in the city and throughout the State; procures partners with large and small amounts of money; negotiates sales of mining property, and does a General Agency Business. Patronage solicited by mail, express, or by personal application at the office, 402 Montgomery Street, San Francisco, California. 23v11tf

BROCKWAY'S

PERPETUAL CALENDAR

Shows without hesitation

The Date or Day of the Week,

—OF—

Any Day or Date in the 19th Century,

Rendering it a prompt and accurate

ASSISTANT RECKONER,

Besides answering fully
And Conveniently
All the Purposes of the
Ordinary Counting-House Calendar
During the Nineteenth Century.

The Calendar for each month is arranged in a single column, as in the regularly published (book) Almanacs, rendering it more easy for reckoning, in most instances, than the customary Counting-House form of Calendars.

It is simply understood.
It affords the same reference from year to year.
It avoids errors.
It occupies a convenient space.
Its usefulness increases by use.
Once used it becomes indispensable,
It is worth one hundred times its cost.

Its cost is trifling, but its value is constant and perpetual. For a single reference it is often worth ten times its cost. In financial, legal and business transactions, it saves many grave and important mistakes.

STANDARD SOAP CO.'S

WASHING POWDER.

Facts that can be Proved:

One Pound of the Standard Soap Co.'s CONCENTRATED ERASIVE WASHING POWDER will do the work of two pounds of Bar Soap, saves half the time, labor and expense; does not injure the clothes, but turns them out sweet and clean. No additional Soap needed; works equally well in hard and soft water; excellent for woolens, as it contains no resin; splendid for dishes, milk cans and dairy fixtures. Ten pounds will produce a barrel of fine Soft Soap in ten minutes.

Manufactured and put up, with full directions for use, in pound papers and packages of 10, 12 and 24 lbs., by the

STANDARD SOAP CO.,
23v11-1m 207 Commercial street San Francisco.

MINING LAWS AND FORMS.

Third Edition revised and enlarged.

Compiled by H. B. CONGDON.

THIS Edition contains all the laws of the *STATE OF CALIFORNIA* and *NEVADA TERRITORY*, relative to Mining Corporations together with the Mining Ordinances of Mexico, complete; Digest of Decisions of the Supreme Court; Forms etc. 16 mo. flexible cloth, 192 pp. $2.50.

(Southwest corner of Sansome street, on 2d floor,)

Formerly WATERS BROS. & CO.'S.

We are now prepared to offer customers the most favorable inducements to patronize our Book and Job Printing Establishment. Our office is supplied with an extensive assortment of Type, and the best style of Presses for good work and

CHEAP AND RAPID PRINTING.

Patrons will always find us well up to the times, ready to execute superior work, and furnish the same as cheap as any prompt and reliable firm in San Francisco.

Our aim is to suit our customers in regard to style and prices, and will guarantee entire satisfaction to every reasonable individual who may be kind enough to bestow upon us his patronage.

We give especial attention, when desired, in assisting parties in making up or revising their copy. Particular care will always be given to the publication of

LAW BRIEFS,
CERTIFICATES OF STOCK,
MISCELLANEOUS BLANKS,
BLANK BOOKS,
MINING BLANKS,

BOOKS,
PAMPHLETS,
CARDS,
CIRCULARS,
MINING REPORTS.

Orders from the interior will receive prompt attention. We shall take care to secure correctness in all work executed for parties out of town. Small packages can be forwarded by mail at small expense.

City customers, or persons visiting San Francisco, are invited to call and examine our specimens, when they will be politely informed of our prices by the Proprietors.

1852. 1866

A NEW VOLUME.

Fourteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, The Golden Era is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

The Golden Era is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

The Golden Era is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render The Golden Era a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome The Golden Era as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the Golden Era, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the Golden Era are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

"THOUGHTS AND THINGS"

APPEAR WEEKLY IN THE GOLDEN ERA.

Read "Thoughts and Things" in the Golden Era.
"Professor Cloarquill." in the Golden Era.
"Dogherry," in the Golden Era.
"Alice Mason," in the Golden Era.
"Hugh Humphrey," in the Golden Era.
"Bill Dadd," in the Golden Era.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business promiuently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

The Time to Subscribe.

With the new year we commence a NEW VOLUME of the MINING AND SCIENTIFIC PRESS. Patrons, whose subscriptions expire with the present number, will receive notice accordingly. We would herewith solicit all old subscribers to renew their orders for the PRESS, resting assured that such a practical appreciation of our enterprise is the most substantial aid which can be rendered in the support of a valuable journal.

INDEX TO VOLUME XI.—We give to-day, with the closing number of the year, a carefully prepared index of Volume XI. This index, it will be noticed, covers our issues for six months only. By a careful examination of this and the previous index, issued on the 1st of July last—the two comprise about nine closely printed columns of fine type—the reader will be enabled to form some idea of the large amount of valuable reading matter which is confined in a single year's publication of the MINING AND SCIENTIFIC PRESS, all of which is furnished for the small sum of five dollars.

ANOTHER MILL FOR OWEN'S RIVER.—Mr. Whigham, who returned from New York on the steamer of the 15th instant, will ship a twenty-stamp mill by the Los Angeles steamer on Wednesday next, for the Chrysopolis mines, Inyo District, on Owen's river. The company is known as the Oro Fino Gold and Silver Mining Company of New York. The mines of this company are four in number—the Chrysopolis, Knickerhoeker, Mammoth and Oro Fino—which have recently been purchased by the Chrysopolis Gold and Silver Mining Company and the Owen's River Mill and Mining Company, through the agency of Mr. Whigham. The mill goes out to Los Angeles by steamer; wagons will be purchased in this city and taken down to Los Angeles, where cattle will be procured and the freight taken thence direct to the mines. Mr. W. will accompany his teams, with the view of expediting the freight as much as possible. He hopes to have the mill running within ninety days from the time of leaving this city. His millwrights left on Thursday, and will proceed overland *via* Visalia. This will be the third mill constructed in that immediate neighborhood. It is directly across the valley from the famous Kearsarge mines.

LATEST FROM AUSTRALIA.—By the brig Miss Kilmansigg, we have Australian dates to Oct. 3d. The gold yield in many districts had increased very perceptibly. The quantity imported by the Sydney Branch Mint for the week ending September 29th, 1865, was 3,809 ounces.

Experiments with Sodium Amalgam in England.

EDITORS OF MINING AND SCIENTIFIC PRESS. I am continually receiving letters from the interior, asking questions as to whether sodium is a benefit to amalgamation or not. My answers are always that it is. It is not in my habit to ridicule people for giving their experiments to the public through the press, no matter how insignificant they are; but I suppose every one knows that in so important a question as the use of sodium in amalgamating gold and silver, we cannot take, as a conclusion, an experiment made with a porcelain dish and iron nail. I let every one judge for himself, and only give you my experience, and that which has been directly communicated to me from others.

Mr. T. A. Readwin wrote to me, about eight months ago, that he is making experiments in North Wales, England, with sodium amalgam. He informs me that he uses small iron pans and my amalgamators; an equal number of pans being worked with and without sodium. The result has been that at least 30 per cent. more gold was produced with sodium than without its use. He has promised to give me further results of his experiments as they transpire, which in due time, Messrs. Editors, I will transmit to you.

About five months ago, I received several lots of ore to work; and I determined to give sodium a fair test. I worked the same ore, side by side, with the same machinery, and the results were as follows; First lot of 500 lbs, each pan with sodium, yielded 85 per cent. of the assay, without sodium the yield was only 55 per cent. Second lot, different ore, with sodium, 80 per cent.; without sodium 60. Third lot, different ore, with sodium, 78 per cent.; without sodium, 65.

I made many more trials, and found that I got from 5 to 25 per cent. more by using sodium than I could obtain without its aid. I noticed a very great difference, however, in the different kinds of ores which I worked. For certain classes of ores I believe sodium to be of great benefit; less for others. A fair trial, on a larger scale, would soon settle the question; and I hope that some of your correspondents will give the sodium a fair test.

J. MOSHEIMER.

NEW MAP OF NEVADA.—We have received from Warren Holt, publisher, 305 Montgomery street, a new map of the State of Nevada, which in fullness of details, and perfection of topography, as we are informed by those who are intimately acquainted with the geography of that region, is quite superior to anything heretofore issued. The boundaries of the several counties, location of mining districts, principal towns, passes, roads and trails, the sinks, sloughs and springs, alkali flats, deserts and salt beds, and innumerable other singular objects and localities wherewith that strange country abounds, are all put down with as much accuracy as the imperfect knowledge of those distant and desert regions, and the rapidly multiplying mining districts will admit of. This map will be found extremely useful to all interested in mining operations in the State of Nevada.

THE OWEN'S RIVER CANAL.—Mr. Whigham, who went East some months since to dispose of certain mining properties in the Owen's river region, and among others the well-known Owen's River Canal project, which is intended to furnish the water power with which to develop that country, has fully succeeded in the object of his mission. The sale of certain mines, and the measures now in progress for their development, are elsewhere alluded to. With regard to the Owen's River Canal, we understand that Mr. Whigham has secured the organization of a company in New York, which will receive the old stock and issue new—a certain portion of which last will be re-issued to the original stockholders. The new company will furnish a working capital of $150,000. Operations will be commenced by them as soon as the necessary preliminaries can be effected. The work will be completed in sections—the first of which, ten miles in length, from San Carlos to the Eclipse lode, will probably be completed inside of a year from this date. The early completion of this important work is earnestly desired by a great number of miners and farmers, who have located claims along the line of its wake, but which cannot be made of much value until the canal is in operation. The canal itself can scarcely fail of proving a profitable investment to those who have undertaken its construction.

BULLION FROM EL DORADO CANON.—The first important arrival of bullion from the mines of El Dorado Cañon, on the Colorado river, was received by Wells, Fargo & Co., yesterday by the Orizaba, which arrived on Thursday evening. The amount is within a fraction of $20,000, and was taken out by the Colorado mill, from ore taken from the Queen City and the Techatticup mines. The per ton yield of the ore, from both mines, exceeded the anticipation of all parties interested; and as a consequence, the holders in all the other mines of that district are in high spirits at the result. The announcement on the street yesterday of this important arrival, created quite an interest among holders of Colorado stock generally; and we presume the shareholders, who have heretofore been somewhat neglectful of such stock, will look closer in future after their interests in that quarter. Those who do not, may look out for a lively time with the jumpers.

A MINER'S GRAVE.—We visited "Lone Mountain," a few days since, and while rambling among the beautiful sepulchres, our eye was arrested by a small, unpretending monument, erected to the memory of a young man who died in Humboldt county, Nevada. It was of white marble, the top of which was decorated by several neatly arranged mineral specimens. Although the words chiseled upon the marble were few, yet those "specimens," indicative of the miner's search and toil, seemed to convey a language, and we thought them peculiarly appropriate. How many young men who left their distant homes full of golden visions, have done their last work in this promised land. What to them is all the mineral wealth of this new world? They need but the heritage of a grave.

ANCIENT GOLD DIGGINGS AT THE FOOT OF THE ALPS.—From a passage in Strabo (Book iv., ch. 6), it would appear that Imperial Rome was once pretty well inundated with a glut of gold, from the mountains of Northern Italy. The passage referred to, translated into English, reads as follows:

Polybius says that in his time the gold mines were so rich about Aquileia [situated near the southern foot of the Alps.] but especially in the country of the *Taurisci Norici*, that if you dug but two feet below the surface, you found gold, and that the diggings (generally) were not more than fifteen feet deep; that in some instances the gold was found pure, in lumps the size of a bean or a lupin, and which lost only one-eighth in smelting; in others, it required more smelting, but was very profitable. Italians aiding the barbarians in the working for two months, *gold became forthwith one-third cheaper over all Italy*; and the Taurisci discovering this, drove the Italians away, and monopolized it themselves. At present all gold mines belong to the Romans.

The fact, as stated by Polybius, that two months working increased the gold over all Italy so much as to cause it to fall in value *one-third*, would imply a very rich placer. It also appears that the "barbarian" portion of the country where it was found were somewhat selfish, and refused to allow their neighbors, the Italians, to join with them in digging for it. It would, moreover, appear from the above, that the finding of rich gold mines in the great Alpine tunnel is by no means a thing altogether improbable; as these ancient gold fields must have been very near where the southern terminus of the tunnel debouches from the mountains.

PRECIOUS STONES AT MARTINEZ.—Dr. E. F. Hough, of Martinez, placed before us, yesterday, several precious stones, a few from great numbers of equally valuable ores which have recently been found on the bank of the Sacramento river just above the wharf at Martinez. Among these stones we noticed a large and really beautiful moss agate, apparently equal in delicacy and beauty to the famous Oriental stones of this description, which are so highly prized in Europe. This stone is valued at a very high figure. The most remarkable specimen of this variety is now included among the crown jewels of France, and is valued at about one million of dollars. We also noticed an elegant fortification agate; a jasper agate of variegated colors; a moss agate containing small particles of some kind of metal; also a specimen of cacholong, a variety of opal. We shall allude further to the occurrence of these stones at Martinez, their character, etc., in a future number.

THE GOLDEN AGE.—The fine steamer Golden Age, of the P. M. S. S. Company's line, having lately undergone a thorough re-fitting, and supplied with new boilers, will leave the company's wharf, on Folsom street, to-day, taking passengers and freight for New York. Upwards of $150,000 have been laid out upon her since she has been at Benicia, and she is said to be now in as good or better condition than when she first arrived in San Francisco.

A NUGGET of gold worth fifty dollars was lately found near Red Dog, by a man who had been in the State only three weeks.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

THE AGE OF GOLD-BEARING ROCKS.

BY PROFESSOR ROWLANDSON, F. G. S. L.

NO. VIII.

In the last published part of this series, which appeared in the number of the Mining and Scientific Press of the 5th August last, I mentioned the fact, on the authority of Mr. Horace Mann, that Miss Errington had discovered some belemnites near Bear Valley, in close proximity to the Pine Tree lead, at Mount Bullion, on the Mariposa grant. In a few days after the date referred to, I had some conversation with Professor W. P. Blake, at the office of this paper, in reference thereto, during which Professor B. informed me that he had collected some fossils at the place named, and had introduced them, accompanied with a brief notice, to the attention of the California Academy of Sciences in the fall of 1864, and published in their proceedings* under the caption of a—

NOTE ON THE DISCOVERY OF FOSSILS IN THE AURIFEROUS SLATE FORMATION OF THE MARIPOSA ESTATE, CALIFORIA, AND THE PROBABLE GEOLOGICAL AGE.

During a recent visit to the Mariposa estate, Mariposa county, my attention was called to some organic remeins in the slates, near Beer Valley, by Miss Errington, a lady who takes an enthusiastic interest in the sciences of geology and mineralogy, and has for some time past been seeking for fossils in the gold formation of that neighborhood. One of the specimens was the cast of a bivalve shell, and appeared to me to be a *plagiostoma*. On further search, we found other specimens, some of which much resemble *inoceramus*, to which I am inclined to refer them. Certain long tubular caveties in the slates, marked with heavy lines, and slightly converging, seemed to be casts of long, nearly cylindrical shells, possibly *nerinœa*. These forms would indicate a Jurassic or Cretaceoue age for the formation. I propose to suhmit these specimens to a competent palæontologist at the East, for exnmination, and to dedicate one of the species, if new, to Miss Errington.

Professor Blake further informs me that the hox of specimens had heen forwarded to the Smithsonian Institute, but that owing, as I understood Professor B., to some unpleasantness occurring connected with the State Geologist, their full description had not yet been published; in fact, if I remember correctly, I was left to infer that their public description had been withheld at the instigation of Mr. J. D. Whitney, the State Geologist.

Susequently, viz., on the 21st November following, Mr. Gabb, the Palæontologist to the State Geological Survey, read before the same socicty a paper on the eame subject, under the head of—

NOTES ON SOME FOSSILS FROM THE GOLD-BEARING SLATES OF MARIPOSA, WITH DESCRIPTION OF SOME NEW SPECIES.

Through the kindness of Miss Errington, of Bear Valley, Mariposa county, I have had the opportunity of examining a series of fossils, discovered by thnt lady on the Mariposa estate. The shells appear to be of Jurassic age. The genera, so far recognized, are Belemnites, Nucula or Leda, Lima, Precten, and Pholadomya. The following are sufficiently perfect for description. Fuller descriptions and figures will be publiehed hereafter in the geological report of the State.

Lima, Brug.—*L. Erringtoni* G. Shell very oblique, eides subparallel; beaks small; anterior end prominently rounded, sloping with a broad curve below to the base; posterior eide nearly straight, continuing upwards in a long, narrow ear; anterior ear obsolete (?).

Surface marked by strong concentric undulations, crussed on the upper and posterior portione by fine radiating lines.

Length, 2.25 inches; width, one inch.

The specimens are nll very much compressed, and may he somewhat distorted in form, though the outlinee are very nearly uniform in all of the specimens.

Pholadomya, Sow.—*P. orbiculata* G. Compressed, eub-circular; beaks rather promineut, nearly neutral; anterior end and base regularly rounded; posterior end elightly produced, more prominent below than above. Surface ornamented by concentric ribs, irregular in size, crossed by undulating, radiating lines on the anterior half of the ehell. These lines become gradually obsolete, and disappear on or ahout the middle of all of the specimens, nlthough more perfect examples might show them continuing further.

Height, from a slightly-distorted specimen, 1.1 inch; width, 1.3 inch.

Like the preceding species, nll of the specimens have suffered considerahly hy compression; and had we perfect specimens, the shell would be found to be quite convex.

Belemnites.—*B. Pacificus* G. Long, slender, tapering very gradually and with a slight convexity to the tip. Section, sub-elliptical; alveolus deep and narrow.

A specimen 3 inches long, measures 35 in. in diameter in the middle. One cast has been found with a diameter of .9 inch at the broad est part.

I first discovered this species, as imperfect casts, in the slates near Spanish Flat, ElDorado county. Since then numerous fragments and casts have been found nt Mariposa, by Mr. C. R. King and Miss Errington.

The only notice, as promised above, which has hitherto appeared from the State Geologist, is a brief one in the preface to the volume of plates recently published, in which it is stated that, "during the spring of the current year (1864), Mr. Clarence R. King mede some valuable explorations in the Humboldt ranges of Nevada Territory. He also, previously to that, had made nn interesting contribution to the geology of the Sierra Nevada, by the discovery of *belemnites* in close contact with one of the great auriferous quartz veins of the central gold mining region (on the Mariposa estate),† thus ndding a very important link to the chain of evidence, going to show that the auriferous slates nnd metamorphic rocks of Californin are, to a large extent, of secondary age, and not palæzoic, as had heretofore *always been assumed without evidence.*"

The last few words have been italicized hy me, hecause Mr. Whitney had not only been informed by me personally that on other than palæontological evidence I had for many years held an opinion quite the reverse. This was stated to him at the interview in July of 1863, when he refused to afford me any information whatever after he had learned my object in seeking it. Nor was Mr. Whitney unaware of my first series of articles on this subject, published in the *Alta*, relating to the point under consideration, because he sent Mr. Gabb to wait upon Mr. MacCrellish, in order to complain of some deprecatory remarks which I had made in reference to Mr. Whitney withholding information sought by me; but which reticence was defended on the ground that it wae his duty to do so under the Legislative act constituting the State Geological Survey—a plea that might have obtained acceptnnce had a similar silence been also maintained in other instances. In place of which of the limited amount of twenty pages of preface, which, be it emphatically remarked, constitute *the whole of the State Geologist's contribution to the only volume relating to the survey which has hitherto been distribnted in this State*, more than three-fourths of it previously nppeared in *Silliman's Journal*.‡ With the exception of the part noticed, the State Geologist has not thought fit to contribute anything, not even some corrections which he must have possessed ample time for mnking.

Of the carboniferous fossils, the localities are not given, excepting such a wide one as to render it impossible, to judge from the information afforded, how far the theory is correct or not respecting the analogy claimed to exist by Mr. Whitney between parts of this coast as compared with the Trins of the Eastern Alps. Taking the volume which has appeared as a sole guide, the analogy claimed does not appear to be well borne out.

The reason why I have so long delayed the completion of this series has chiefly arisen from a desire to obtain all possible information connected with the snbject before I concluded my observations. Not wishing it to be continued in another volume of this journal, and having waited until the last moment in order to obtain a perusal of the long-promised part relating to the general geology of this coast, I have been compelled to finish my remarks without having seen it.

The State Geologist was absent from Californiа more than fifteen months, professedly for the object of supervising the publication of the two volumes alluded to. I have already shown that by far the largest part of the published volume is the work of Mr. Gabb. If Mr. Gabb could revise *plates* and letter press whilst residing in California, why could not Mr. Whitney also remain and revise letter press, which can be so much more easily corrected through the mail as compared with drawings. Besides, if the promised volume of the General Geology of Californin had not gone to press at the time the State Geologist left the East, it would have to be corrected from the Pacific side. If this is the fact, in what existed the advantage of Mr. Whitney heing absent a year and a half from the active duties of his position? It will eurely not be contended that Mr. Whitney went East in order to obtain assistance in arranging and writing up the volume relating to the general geology of California. The most fitting place for that purpose was the Pacific coast, where anomolies, misconceptions, and occasionel lapses of obliviousness could be most readily and easily explained or supplied. Had the long-promised volume of letter press been completed before Mr. W. left the East, it ought before this time to have heen in the hands of such of the California public as chose to purchase it.

One very singular circumstance connected with the discovery of the fossils under consideration, is that which the State Geologist informs us, viz., that Mr. C. R. King discovered them *prior* to the spring of 1864.§ Mr. Gabb does not appear to have heen aware of the circumstance. On the other hand, Mr. Gahb leads us to infer‖ that belemnites were discovered by *him*, in El Dorado county, prior to the discovery of Miss Errington and Mr. C. R. King, on the Mariposa grant; yet, this presumed earlier discovery of Mr. Gabb does not appear to have been known to the State Geologist—mystery and reticence all round—perhape Mr. Gabb will explain.

The writer has no interest whatever as respects the priority of discovery, except such as must be generally felt in desiring to nward honor alone to where honor is due, which, in this instance, he sincerely helieves ought to hc nccorded to Miss Errington.

As the Legislature is now in session, it is to be hoped that precnutions will he taken that in future the State finances shall not he so ueelessly squandered ae they appear to have been with this survey, nnd if it is to be continued, let the State have a reasonably fair return for the mouey disbursed—a fair dollar's worth for a dollar—hitherto we have not had a pienyune's worth for every dollnr expended—*malgre* all the stilted statements made by a few members of the executive and legislative bodies, who appear to claim the honor of being entitled to be looked upon as patrons of science, simply because they are advocates for the expenditure of public money in its name, without taking proper precautione ngainst the wasteful or useless application of the sums appropriated for that object.

I can only briefly allude to my own diecovery, towards the close of June, 1864, of organic remains on the banks of the Merced, which were described in a former paper, viz., a few needle-formed perforations, including one about a quarter of an inch in diameter, or rather irregular form. Of the smaller ones, they appeared to resemble more the character of *dentalium* than any other with which I am acquainted. These are to be found about five miles from the locality where Miss Errington discovered those near the Pine-Tree lead. From the description given me of the locality where Miss E. obtained the specimens above described, I suspect that the traces of former life discovered by me, near the Merced river, must belong to beds at least 500 or possibly 1,000 feet below those where fossils had been found on Mount Bullion. I deeply regret that while in that vicinity, for more than three months, I was unaware of Miss Errington's discoveries; had I been eo, I should have made a speciel search, in order to have discovered the locality from which the numeroue large boulders of conglomerate were derived, composed of brecciated and water-worn pebbles, associated with pieces of what I at the time assumed to have been composed of pumice, but which might possibly have heen corals. I have not the slightest hesitation, however, in expressing my conviction that the conglomerate strata from which these boulders were derived, is situate above the beds where I discovered traces of organic remains, and most probably below the beds on Mount Bullion, where fossils have also been found.

The evidence so far is tolerably good, that what may be termed the champion auriferous vein of California, extending more than forty miles in length, and in some places upwards of one hundred feet in hreadth, protrudes, at least in certain localities, through rocks as recent as the Jurassic; a point which I hnd for many years suspected, on theoretic grounds, not only as possible but as highly probable. These views, however, I only very rarely expressed to others, as it may easily be conceived that the opportunities have been exceedingly rare for mutual interchange of thought on such a subject as is opened out by this field of euquiry. The theory of the formation of mineral veins, and the nssociation therewith of the noble and ordinary metals, is, per. aps, the least advanced of any connected with modern science—a fact chiefly owing, I believe, to the circumetance that few persons have paid much attention to the subject who were well versed in chemistry, especially those hranches of that science which specially pertain to metallurgy, and the influence of high temperatures in disseminating and moditying the character of metallic compounds usually found as minerals in the course of mining. A very short time, however, prior to my leaving England, neer the end of 1855, I did explain my views fully to the late Daniel Sharpe, on an occasion when that lamented gentleman exhibited to me a specimen of fissile roofing slate from the Alps, similar to those obtained from the Lower Silurien formation of North Wales, yet Mr. Sharpe assured me that he witnessed the most incontestihle evidence that the specimen of slate hrought by him from the Alps belonged to the Liessic group of rocks. I wes to have corresponded with this gentleman on matters relating to the age of Gold-Bearing rocks, his sudden and untimely decease, which occurred almost simultaneously with my arrival in California, prevented this arrangement being carried into effect, eo that with the exception of an occasioual expression of opinion, I took no steps to promulgate my views, until the appearance in the *Alta*, July, 1863, of the first of my pepers relating to the age of Gold-Bearing rocks.

It was proposed completing this paper in the present number. The manuscript extended to too great an extent for insertion in this day's publication; the bnlence will appeer in our next.

[Written for the Mining and Scientific Press.]

Note on Gurlts' Process.

BY PROFESSOR ROWLANDSON, F. G. S. L.

Owing to innttentive reading, I inadvertantly classed Gurlts' process, in my communication of last week, as an *amalgamating* in place of a *humid* one; all the prior remarks, therefore, respecting the probabilty of the resulting silver har being alloyed with copper are inapplicable. I scarcely regret the mistake, however, as the error has caused me more fully to reconsider the subject, as an indefinite impression existed on my mind that at some former time the principle on which this mcthod is based had previonsly been brought to my notice. After the observations adverted to had been written and set in type, I eearched some old memoranda and discovered that my attention was first especially called to the formula on which Gurlts' mcthod is hased, during an after-dinner conversation with the late Robert Stephensnn, the engineer of the St. Lawrence, Britannia, Conway bridges, etc., etc. The immediate cause which led to this particular subject, arose from some remarks made by Mr. S. respecting a patent which I had recently obtained (February, 1849) for the better extraction of gold and silver from ores containing copper and zinc, in which he drew my atteution to eome experiments made by Boussingault (*Ann. Chim. Phys.* 51, 350,) to the effect that sulphide of silver is not decomposed by aqueous protochloride of copper. If, however, the copper solution contained common salt, the eulphide of silver becomes converted into chloride of silver and sulphide of copper. According to the statement of B., 100 parts of chloride of silver treated in this manner for a few days, yield 146 parts of a mixture of chloride of silver and sulphide of copper. In the first instance, half the sulphide of silver acts npou the protochloride of copper, forming chloride of eilver, free sulphur, and dichloride of copper, which remains dissolved in common salt:

$$Ag.\ S. + 2\ Cu.\ Cl. = S. + Cu^2\ S.$$

Afterwards, the dissolved dichloride of copper, and the other half of the sulphide of silver, form chloride of silver and sulphide of copper:

$$Ag.\ S. + Cu^2\ Cl. = Ag.\ Cl. + Cu^2\ S.$$

From which Boussingault* inferred that sulphide of silver undergoes decomposition in a solution of dechloride of copper in common salt.

It is not generally known that the late Robert Stephenson's first independent position in life was that of superintendent of the Columbian Gold and Silver Mining company, whose operations were carried on in Central America, a position which he occupied for five years. During this period he was associated with the celebrated French chemist Boussingnult, the

---

* October 3d, 1864.

† The Pine Tree lead is probably here alluded to.

‡ A large part in the September number for 1864.

§ Does not state whether prior or after Miss Errington's discovery.

‖ This may probably have occurred unintentionally, in consequence of hastily drawing up the notes relative to the discovery alluded to.

* Boussingault will, perhaps, be better known to the general reader as an agricultural rather than a metallurgic chemist. His Rural Economy must be known to nearly all intelligent persons.

latter being the superintending metallurgist, to whose genius and industry the present generation is indebted for no mean share of its present stock of useful metallurgic knowledge. Boussingault and Stephenson mutually esteemed each other, and maintained a life-long correspondence; the latter was a good chemist, having been taught by the late Professor Phillips, and never felt more gratified than when discussing points relating to chemistry, as applicable to metallurgy, mining and geology. Of the numerous men possessed of the highest intellectual attainments, of whom it has been my good fortune to possess the honor of familiar intercourse, I never met one that at all approached the late Robert Stephenson, not only in the variety but also the proficiency of his knowledge in every department of science excepting astronomy, to which I never heard him make any pretensions.

The researches of Boussingault, just noticed, threw much light upon amalgamation processes generally, and especially of that known under the denomination of the Patio method. Skilled parties would not find it difficult to convert the theory into practical account, and adapt it for reducing poor ores and tailings now wasted or lying dormant. At the conversation alluded to, some other points of great importance relating to metallurgy were introduced, which I will name hereafter if a fitting occasion arises. The defective point in Boussingault's discovery will be found in practice to consist in the fact that mineralized silver, in ordinary ores, does not generally exist as a simple sulphide of silver, but more frequently as a double or treble sulphide, often even with a larger admixture, as in Polybasite, notwithstanding which I have no doubt there are many cases where the so-called Gurlt's, or rather, Boussingault's process, could be advantageously adopted. Boussingault published his observations more than a quarter of a century ago, which fact affords me an appropriate opportunity for again repeating what I stated five years ago—namely, that there existed little room for invention or discovery in relation to the treatment of silver ores; that branch of chemistry has been well worked. What is needed in these States and Territories is the employment of men to superintend the working of such ores, not only well acquainted with the existing knowledge on the subject, but who have had some practical experience in what may be termed chemical metallurgy, combined with quickness of perception and comprehensiveness of mind, so as to be enabled at once to conceive the best mode to be adopted in each case, allied with practical aptitude in carrying fitting conclusions into economic effect.

THE HOOSAC TUNNEL TO BE ABANDONED.—That magnificent abortion, the Hoosac Tunnel, which has already swallowed up several millions of dollars, is likely to be abandoned on account of its difficulty and expense. The continuance of State aid in its construction will come up before the present session of the Massachusetts Legislature. The *American Railway Times*, of Boston, which seems to be authority in such matters in New England, takes ground against it, and in favor of State aid in the construction of a railroad over the mountains, as in the case of the Pennsylvania Central and the Baltimore and Ohio railroads.

SENATOR STEWART'S JUDICIARY BILL.—The *Virginia Union*, noticing the telegraphic report that Senator Stewart has introduced a bill in Congress, defining the duties of the United States Courts on the Pacific coast, says: "The story is obtaining credit in circles supposed to be in the secret of the Senator's plans, that the object of the bill is to vest in these courts jurisdiction over all cases of litigation, the subject-matter of which is situated on the public lands."

DR. CHANNING, in his recent lecture before the Boston Science Association said that the Russian peasantry had a way of washing which he had not seen related in any book of travels. They took a mouthful of water from the pump, and, after holding it until the chill was well off, spurted it, with a lively jet, into the hands, and applied it briskly to the face. Towels they have none.

LUCKY AGAIN.—The Smiley wrecking party, which left here sometime ago to explore the wreck of the steamship Golden Gate, have succeeded in fishing up about eighty thousand dollars of the lost treasure. A portion, amounting to seventeen thousand dollars, has already been received in this city.

IT is said that the Empress of Mexico transacts all the business pertaining to the government. She is said to be a shrewd and hard worker.

Mechanical.

THE IRON INTEREST IN THE UNITED STATES.

The production of iron and steel, and their manufacture into the various classes of heavy work and machinery, must ever form one of the most important industrial interests of every civilized community. The iron regions of this country, as well as its coal fields, are absolutely inexhaustible. To say nothing of the Lake Superior and Missouri production, there are scores of furnaces in Southern Ohio, and large sums are invested at various other points in the Western and Eastern States. Pittsburg, which is the centre of the iron interest of Pennsylvania, has now in operation thirty-two establishments for making bars, sheet-iron, rods, plates, etc., and six steel works, with a capacity of 200,000 tons per year. This district has five blast furnaces, running almost exclusively on Lake Superior ore.

Soon after the close of the war, and consequent stoppage of government demand, the iron business of the country met with a sudden and most damaging decline. Recently, however, the business has revived again, and the present is most emphatically the iron-makers' harvest. Demands for almost every class of work are coming in from all sections of the country. The furnaces, mills and foundries are everywhere being driven to their utmost capacity, and many are greatly enlarging their facilities for work. A bright and permanently prosperous future seems now in store for the iron trade of the country.

STEEL MANUFACTURE.

An especially increasing attention is beginning to be felt in the manufacture of steel. The late improvements recently introduced into this branch of the iron business in Europe are being rapidly transplanted to this country; and the application of steel to a wider range of purposes is fast being made. The opinion is rapidly gaining ground that the improvements for cheapening the manufacture of steel, will soon make its use quite as general, if not more so than iron. It is believed that the time is not far distant when even our railroad tracks, at least all the principal lines, where the rails are subjected to heavy and continuous wear, will be made of steel.

The Pennsylvania Railroad Co., have recently been experimenting in this direction, and have furthermore availed themselves of the best European experience; and have become thoroughly convinced of the superiority in point of economy of the steel over the iron rail. Under the encouragement of this company, a capital of $1,000,000 has been raised for the purpose of erecting steel works, for manufacturing steel rails, wheel-tires, etc.

S. M. Felton, Esq., late President of the Philadelphia, Wilmington and Baltimore Railroad Company, is President, and R. H. Lamborn, late Secretary of the American Iron and Steel Association, is Secretary. The works will go into operation at Harrisburg, on the ground contiguous to the Susquehanna river, and immediately on the line of the Pennsylvania Railroad. It is admitted by all practical machinists that this enterprise will be the most extensive of its kind ever erected in America, and is to be on this continent what the celebrated works of Wade & Butcher at Sheffield are to Europe. One thousand experienced workmen in steel will be brought from England, while 15,000 other skilled mechanics will be required for the full operation of these works.

DUTIES AND TAXES SHOULD BE MODIFIED.

It is somewhat unfortunate, at the present time, that the existing revenue laws show a striking disproportion between the home tax and the tariff on iron, the effect of which is highly injurious to the great iron home interest. Efforts are being made, however, to make such a representation to the present Congress, as it is thought will call for a prompt and wise modification of existing legislation on this matter, to the end that this industry shall be placed in a condition to thrive and increase; a matter especially important at the present time, when the threatening aspect of our foreign relations are such as may at almost any moment throw us upon our own resources, in this pre-eminently important branch of industry.

A SUGGESTIVE REMARK.

Mr. D. J. Morrell, of Johnstown, Penn., in contrasting the miserable wages of fifty cents a day paid by English iron masters, with the price of two dollars per day paid by American iron manufacturers, makes the following highly important and suggestive remark:

"That portion of the price of a ton of imported iron which stands for the wages of labor represents coarse food, mean raiment, and worse lodging, political inutility, enforced ignorance, serfdom in a single occupation, with a prospect of eventual relief by the parish. That portion of a ton of American iron which stands for the wages of labor, represents fresh and wholesome food, good raiment, freedom of movement and change of occupation, intelligent support of the machinery of municipal, state and national government, with a prospect of comfortable old age, dividing its substance, with blessings, among prosperous children."

THE AMENOORAPH.—Among the scientific novelties exhibited at the late meeting of the British Association at Birmingham, there was an instrument invented and patented by S. B. Howlett, of the War Office, by means of which winds, from the gentlest breezes up to the most furious storm, can be made to record their own direction and force in the form of a diagram on paper. In other words, the instrument has only to be set in an exposed position, and left to itself during the continuance of a breeze or storm, and it will present an observer with an accurate map, drawn to a scale, of what the winds have been doing. Their direction is shown to a degree, and their strength is measured to half an ounce, and this with unerring precision. The instrument does not occupy more space than an ordinary theodolite, and is pyramidal in shape.

MACHINE FOR REGISTERING MUSICAL NOTES. One Herr Andres, of Mayence, has invented a machine which will write down music as fast as it is played. The inward organization of which is still a secret; it is said, however, to be very simple, and cheap, and may be readily adapted as an attachment to any instrument, such as a piano, organ, etc. The visible process outside consists in inserting at one end of the machine an endless strip of paper, which comes out at the other end ruled with red lines, while the music is printed in black. It prints the notes, marks the pauses, and forte on the piano, and notes when the employment of the pedal commences and stops, etc. The invention may be entirely concealed under or behind the instrument. If it will accomplish all of this, it must be really a wonderful invention.

HOW LOCOMOTIVES ARE MADE IN THE UNITED STATES.—The great competition in this country has made a resort to system, or fixed plan of procedure, a matter of necessity. There are no less than twenty noted establishments where quantities of engines are turned out, to say nothing of lesser ones, and repair shops, which do a great deal toward renovating and rebuilding engines. In the best of these large shops the same principle is pursued as in the manufacture of Colt's pistol, or a Springfield rifled musket; that is to say, every engine of its class is exactly like its predecessor, and a cylinder could be made and fitted to a locomotive anywhere with the certainty that it would be right as to its centre from the frame, right as to its position on the frame, and of the same dimensions in other respects to insure its proper working.

RYE STRAW AND TOW PAPER.—M. A. Cushing, of Glenn's Falls (N. Y.) sends the *Scientific American* samples of paper made from three parts coarse tow, shoove and all, and thirty parts of rye straw. The paper is very white and of good quality, and devoid of that harsh, brittle feeling and texture which is common to straw papers. The company is now making two tons per day.

MECHANICS' wages are advancing in England. The cabinet makers in London lately demanded an advance of ten per cent. on all kinds of work, and received it.

LAKE SUPERIOR IRON.—The quality of the Lake Superior iron is conceded to be superior to any iron in the world, as is shown by the following analysis, giving the strength per square inch in pounds:

Salisbury, Conn., iron	58,000.
Swedish (best)	58,134.
English cable	59,105.
Center Co., Pa.	50,400.
Essex Co., N. Y.	50 960.
Lancaster Co., Pa.	76,969.
Com English and American	30,000.
Lake Superior	80,582.

But little iron is worked into manufactures on Lake Superior except for home use. Car wheels are made to some extent at Harvey, and at the railway car shops at Marquette—a very complete establishment, by the way, which under the superintendence of Mr. Dunkersley, turns out all the work needed on a railway. For car wheels, gearing, shafting, boiler iron, and in fact for all uses where great strength and freedom from imperfections is required, the Lake Superior iron must ever take the precedence over all others.

OBTAINING MOTIVE POWER.—An invention, the special object of which is to enable the heat produced by combustion to be utilised in the production of motive power through a greater range of temperature than is now done, in order that a larger proportion of the heat may be converted into mechanical effect, has been provisionally specified by Mr. M. P. Boulton, of Tew Park, Oxon. He states that heat may be imparted to the fluid by injecting into the vessel some substance in a state of fusion—metals, or salts of metals—the steam being used in various ways as that produced in the usual method is employed.

CAST-IRON NAILS.—Cast-iron nails are now extensively used, and are found to rust much less rapidly under the influence of the atmosphere than ordinary nails, or even those made of copper. They are used especially in making roofs for manufactories which produce gases that corrode common wrought-iron. The nails, after being cast from very hot metal in sand-moulds, are rendered malleable by being exposed to a red heat for 72 hours in refractory retorts containing pulverized oxide of iron and sawdust, and then allowed to cool slowly.

NEW MATERIAL FOR MATTRESSES.—Nineteen large bales of the rough mossy covering of the soap-plant root, or bulb, have arrived in this city from Salt Spring Valley, near Copperopolis. This material has been tried, it is said, and found to answer a very good purpose for mattresses. When thoroughly cleaned and prepared, it is esteemed superior to pulu, inasmuch as it does not form into hard lumps, but remains soft and yielding while in use.

A MECHANICAL LUXURY.—A patent has recently been taken out in France for a carriage that is air tight, and so strong that the air may be compressed in it to a density suitable to the necessities of patients who have diseases that require them to be kept in compressed air, in order to breathe effectively. The air is constantly pumped in, as the carriage runs, by a pump which is worked by an eccentric on the axle of the hind wheels. This must be a great luxury for invalids.

STEEL CAGES.—The subject of the introduction of steel cages, instead of wood or iron, for use in the mines, is being agitated in England. The chief object is to get rid of the weight. A steel cage can be made that will weigh one-third less than an iron one, and still be much stronger, and more enduring.

A LARGE ORGAN.—Mr. Joseph Mayer, of this city, is constructing for the Synagogue of the Congregation Emanuel, the largest organ ever built on this coast. Its cost will be about $8,000.

A GREAT WOOD CHOPPING FEAT.—The San Andreas *Register* says: A young man named Michael Welch at Donnallan's ranch, recently chopped 122 cords of wood in 25½ days, and corded up 26½ cords in one day, and 32 cords in another.

PETROLEUM VS. COAL.—Mr. C. J. Richardson, in a letter to the London *Times*, says his brother at Woolwich Dockyard has shown that petroleum is 50 per cent. more powerful than the best coal as steam fuel, that it can be burned with ease and without danger.

LARGE quantities of sugar pine staves for syrup barrels are manufactured in Tuolumne county, east of Sonora, and shipped to San Francisco. The business promises to become an important branch of industry.

THE first locomotive made in Iowa, was turned out of the workshop of the Des Moines Valley Railroad at Keokuk, Saturday, October 14, and put upon that line—more soon to follow.

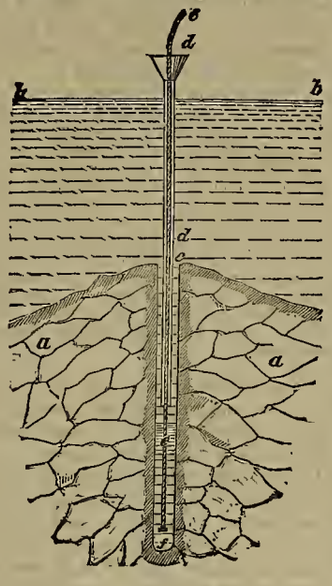
THE NEW BLASTING AGENCY.

NOBEL'S PATENT BLASTING OIL — (NItro-Glycerine)

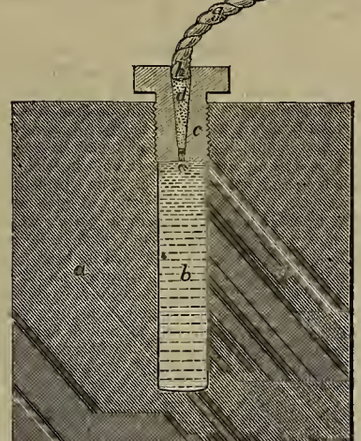
[Extracts from a work now in Press in the "Mining and Scientific Press" Job Office—by permission of the Publishers, Messrs. Bandman & Nielsen, Sole Agents for the Pacific Coast, No. 210 Front street, San Francisco.]

[CONTINUED.]

Directions for blasting under water.



a Is the rock.
b The water level.
c A bore.
d A tube with a funnel mouth. The tube, *d*, is passed down through the water into the bore, and the oil is poured down it; this done the fuse, *e*, with a capsule, *f*, is likewise let down through the tube, *d*, which latter is then removed, and the charge is ready.



Directions for blasting heavy blocks of iron, steel, &c.

a Is a block of iron.
b A bore of ¾-in. or 1-in. diameter.
c A screw with *loose winding*.
d A bore through the screw, which is to be very narrow, at *e*, and tightened with wax and filled with gunpowder, then connected with the *fuse g*, at *h*.

The bore to be completely filled with Nitro-Glycerine.

A ¾-in. bore is sufficient to blast almost any block of iron, but the charge sometimes has to be repeated.

TESTIMONIALS.

FROM GERMANY.

The Mining and Smelting Journal, Nos. 34 and 35, contains the following:

EXPERIMENTS WITH NOBEL'S PATENT BLASTING OIL IN THE OBERHARZ MINES.

Since the beginning of last year a new blasting agent, the *nitro-glycerine*, has been discovered by the Swedish engineer, M. Nobel, which has created quite a sensation. It has been employed already not only in mining, but also for military purposes, and generally found more effective than gunpowder. The relative strength of nitro-glycerine and powder, however, is not yet thoroughly established; the former has been described as from three to twenty times more powerful than the latter, while, in some instances, the action has been deemed equal. However, these considerable deviations can not astonish men of science, when they take into consideration the different circumstances which may influence the blasting of stones and rock, and the combinations to which they are subject, without mentioning the difficulties arising from the nature and quality of the blasting agents employed. We have received, till now, but very little and rather unsatisfactory information in regard to the experiments made with blasting oil in working of mines; for instance, they write us from Stassfurt that the trials made there with blasting oil in the rock salt mines gave equal results to those of blasting powder.

It is evident that the solitary experiments made, so far, do not give a true standard for judging the question, until experience will have taught in what proportion and in what manner this blasting agent can be employed to the greatest advantage; we, therefore, suspended our judgment when Mr. Nohel made bis experiments in the Harz, and more so because these experiments, owing to a scanty supply of blasting oil, could not he extended sufficiently, and because many blasts, on account of an unsatisfactory system of loading, failed to explode with the anticipated results.

However, the excellent results of some experiments have given sufficient proofs of the enormous power of this blasting material. I here refer particularly to two shots fired in a quarry near Clansthal, and to one borehole made in the Bergmanstrost Mine, where the rock was exceedingly hard.

In the former, the masses of graywacke were thoroughly torn up, and in the latter, a borehole of 15 inches depth by 1 to ¾-inches diameter, charged with three inches (0.15lbs. weight) of oil, and a sand covering of twelve inches, was sufficient to detach the floor, where blasting powder would have heen of no use.

In view of these and previous experiments, the Royal Mining Board of Clansthal resolved upon purchasing one quintal of tbis blasting oil, and ordered extensive and effective blasting to be made, for the sake of getting a clear conception of its utility.

The first of these experiments were made on the 11th and 12th of August, of this year, and were made under the direction of the Mining Counsellor, Mr. Koch, and assisted by several officials of the Oberharz mines. The locality chosen was the Trogthal quarry, below Lautenthal, and the results were the following:

The said quarry is worked for procuring building stones, &c., from the culmgraywacke rock found in this locality. The blocks vary in thickness from one to ten feet, their bearing is nearly borizoutal, and very suitable to be worked. Formerly, these blocks were taken out either by blasting with powder, or with crowbars, and sometimes the larger blocks were separated by fire.

For the sake of getting the stones of proper size a bole used to be bored from fifteen to eighteen inches deep, and at the proper distanee from the wall, which, after being blasted, caused a horizontal crack; after this was done a second hole was bored at a distance of two feet from the top to about a couple of inches from the said crack, whicb, being charged and fired, laid bare a block of from five to twenty cubic feet (seldom more). It was thus necessary to makc two horeholes of from twelve to fifteen inches depth for obtaining this result, besides the advantage that the crack often extended farther and prepared the field for further action.

In making the experiments with blasting oil, the intention was to make the boreholes more verticle and less inclined, to go to a greater depth, and, by setting the boreholes at a greater distance from the outer wall, to dislocate larger masses of rock and cause a saving in the small boreholes.

For the first five boreholes, a wall of graywacke was selected which protruded from 70 to 80 inches from the main wall, which had layers of from 80 to 100 inches. These holes were, on purpose, not made very wide, so that they should not interfere with the firing of the other sbots, aud thus ohtain, hy degrees, the experience which was contemplated. Each hole was fifty inches deep, and tbey were hored on a line at a distance of respectively 60, 70, 80, 90, and 80 inches from one another, and nearly in the center of two such layers, and of a width of 1¼-inches at the bottom.

The first hole, situated on the northern terminus of the graywacke hank, was charged with 1½lbs. of oil, which filled nine inches of the hole, leaving thus forty-one inches for tamping, which was done with water, according to Nohel's prescription; consequently, after having fastened a capsule to a Brickford's fuse, it was inserted into the hole to about the center of the oil cbarge, and then filled up with water, leaving the fuse to protrude sufficiently and fastening it at the top with a wood stopper.

After having ignited the fuse it extinguished near the wood stopper. A new one was set in and secured with clay. Two minutes after firing this second fusc, the explosion took place, with the desired result. The stone wall had not heen thrown out, but it was so thoroughly split to tbe very bottom that the blocks could he removed easily with a crowhar.

The next chargc was made in the same manner, with the difference that ¾lbs. of oil came up to a hight of 16 inches. The firing was done without inconvenience, and the actiou was still more satisfactory than in the first hole. The rock was not only thoroughly split, hut raised in such a manner that tbe blocks were thrown one upon the other. Even a fissure of one fathom length was made from the third borehole to the outside wall, laying open a block of seventy inches hy eighty, and shifting it a few inches out of its place, which made the blasting at this tbird hole superfluous.

The fourth hole, fifty inches deep and ninety inches from the outer wall, received a charge of one pound of oil, which occupied nineteen inches in hight. The tamping and firing was the same, and the result equally satisfactory.

The action of this explosion was enormous; not only that the stone wall had heen thorougbly split, hut the firing of the next hole had become unnecessary, as the whole mountain wall had been rent to a distance of ten fcet, and was even pushed out.

Thus, with three boreboles, a result was obtained which was helievcd to require five holes, and a mass of rock was dislocated of fifty feet length, eight feet thickness, and six and a-half feet in hight, equal to 2,600 cubic feet of rock, brought out of its natural connection, and without hurling any stones away. It will, however, require some more blasting to procure stones of smaller size.

These experiments having heen dcemed satisfactory, tbe work was suspended in the evening of August 11th, with the intention of making the chief experiments on tbe following day. These were taken up at the

appointed time by the mining engineer Von Linsingen, aad in presence of some other gentlemen from the miniag regions of the upper and lower Harz, who took an interest in the matter. Holes had been bored in convenient places to the depth of ninoty inches, and at a distanee of ninety iaches from the outer wall. The action of the blasting oil was really astonishiag.

The trial of filliag the borehole with water and of igniting the fuse to which a capsnle had been attached, failed repeatedly, because the fuse either extinguished or burned down without causiag an explosioa. The borehole was then filled with sand, after having introduced the fuse, to which a wooden box was attached, filled with powder, and of three inches length; this box was inserted about one-half into the oil, and quarry grains of the size of about one millimeter were used for filling up.

With this kind of filling the blasting succeeded every time, and six shots were fired in succession, without the least incoavenience.

The first borehole was sixty-four inches deep; it received a charge of 1¼lbs. of oil, up to 26 inches, and threw up 640 cubic feet of rock. One of these blocks, weighing almost 100 quintals, was hurled to a distance of three to four fathoms, while the smaller fragmeats were thrown one over another.

Of still more powerful effect was the next blast, with two lbs. of oil, filling thirty-five inches. The hole had ninety inches of depth, aad was located at aiaety inches from the outer wall. It threw up about 1,000 cubic feet (equal to aqont 1,250 quintals) in smaller aad larger blocks (the latter of more than 100 cubic feet), and separated them completely by shiftiag them in all directions.

The next hole, of scarcely one inch diameter at the bottom, and sixty inches depth, bored into very firm graywaeke, and in an uafavorable stratum, charged with 1¼lbs. of oil to 31 inches, separated about 400 cubic feet of rock.

Another hole of seventy-five feet depth was bored at one fathom from the outer wall, aud charged with one and a half pounds of oil to thirty inches. This blast not only raised the whole mountain wall of about 1,100 feet, but split the mountain from ten to twelve feet in every direetion, by which means, in boring a seeond holo, a couplo of thousand eubic feet of roek were completely displaeed. Another hole charged with 2 pounds of oil to thirty-one and a half inches hight, and with a depth of ninety inehes, at a distanee of ninety iaches from the outer wall, loosened 700 cubie foet of rock.

Finally, I have to mention an experiment made ou a gigantie scale: In the lower quarry of Trogthal, a hole was bored into a roek which offered two vertical sides, and nearly a horizontal upper level; the hole was bored 138 inches deep and one inch wide, at a distauee of twelve feet from the two sides. The charge was made with three pounds of oil, which filled sixty-seven inehes, leaving seventy-one inehes for the eovering with sand. The explosion took plaee four or six minutes after lighting the fuse, and the result was, that this tremendous mass of rock was raised from ten to fifteen inches and then dropped down again, while a similar expansion and contraetion on the sides was noticed from a lower point of observation. It is true that the mass of roek remained in its place after the explosion, but with so little coherency in its different strata that several thousand eubie feet of roek could be removed without difficulty.

The experiments were herewith suspended, to be resumed again, and it was ordered by the Royal Mining Board that similar trials should be made in the mines, and in blasting dross from the furnace (ofen-saue). The above results have convineed everybody that blasting oil eau be employed to advantage in quarries, in the eonstruetion of roads, eanals and railroads, offering besides the benefit that the boreholes could be filled with sand, which caused less labor than that required by the use of blasting powder.

We hope soon to be able to give further information on the use of blasting oil, treating the question from an economical point of view. F. W.

FROM THE OFFICIAL REPORTS

Of the Fifth Industrial Exhibition

Of the Mechanics' Institute, San Francisco, 1865.

[Now in Press—Mining and Scientific Press Book and Job Office.]

FIRST DEPARTMENT.

On Steam Engines and Machinery.

Committee:

CHARLES C. BEMIS. HENRY S. SMITH. THOMAS WINSHIP.

[*Continued from Page 373, Vol. XI.*]

Steam Engine from the Vulcan Iron Works, San Francisco.—This new double-piston Steam Engine was in operation during the entire exhibition, furnishing power for various machines. Its high velocity, the fine finish of its workmanship, the ingenuity of its design, the regularity of its motion, and the perfect ease with which it seemed to perform its work, attracted for this engine a large share of attention.

This stationary Steam Engine is eight inches diameter of cylinder, with two pistons, each eight inches stroke—the rod of one working through the hollow rod of the other. The crank-shaft has three cranks, two of which are attached to the cross-head of the hollow piston-rod of the back piston. The steam is admitted by a slide-valve in the center of the cylinder, between the two pistons, and exhausted from both ends at the same time, giving the whole pressure on the pistons turning the crank-shaft. When the pistons arrive at the ends of the cylinder the steam is admitted simultaneously upon each piston, and the exhaust takes place from between the pistons through the center port. The lap or lead may be obtained as in the common engine, if thought advisable, or a cut-off may be applied of any usual form. The advantages claimed for this engine by the manufacturers are, that it is perfectly balanced in the performance of its work by the combination of the double piston-head, enabling it to be run at a much higher velocity than a single engine, and requiring less foundation, consequently less expense in setting up. The steam being admitted to the opposite pistons at the same time, and communicated to the double cranks, obviates the necessity of a heavy bed-plate. It gives double the power, running the same speed of piston with the same diameter of cylinder as the single engine, and the whole weight of this engine is but 2,500 lbs., while the single engine, of the same power, weighs 4,500 lbs. The Committee believe that for many purposes this engine is entitled to much consideration from those interested in running steam machinery. We are informed that this new motor will be used by the manufacturers to drive the machinery of their works, taking the place of an ordinary single engine of 12-inch diameter of cylinder and 20-inch stroke. This will test the results claimed through the ordinary channels of power, and afford good data for comparisons of economy in working.—Awarded a silver medal.

Construction Valve Indicator, by W. R. Eckhart.—This Indicator is manufactured of silver, and is finely finished and of ingenious construction. It is the invention of W. R. Eckhart, of this city, first draughtsman at H. J. Booth & Co.'s Iron Works. The usefulness of this invention in the construction of steam engines is of much value to those who understand its application. In the mechanical drawing-room much valuable time and labor is spent in calculating and designing the movements of the delicately-working parts of an engine. By the aid of this ingenious device may be determined, without calculation or the forming of complicated lines, the position of the crank, together with that of the main valve and any cut-off valve that depends upon variable lap to cut off the steam (such as Meyer's, Edwards', Lagavrian's, Bodmer's, &c). It also shows the amount of lap that a cut-off plate should have to cut off at any given point of stroke. It shows the amount of lap lead and position of crank, expansion of cut-off and main valve by simply moving the parallels around a given center, they adjusting themselves to the point required. Awarded a silver medal.

Stoddart's Steam Pump, by David Stoddart, San Francisco.—This steam pump is a decided improvement, simple in construction, strong and efficient in action. The Committee submitted it to various severe tests, with the most satisfactory results Its purpose is to elevate water to great hights from shafts, or for hydraulic mining; also to feed high or low-pressure boilers on board of steamers, and to be used as a fire pump in case of necessity. For extinguishing fires on steamers or in manufacturing establishments its value is unsurpassed. It may be placed in the hold of a steamboat and instantly set in motion by simply turning on the steam from the deck or engine room, with the absolute certainty that the pump will immediately work. It can be run as slow as one stroke per minute, and it will deliver its water with the same certainty as if making forty or sixty strokes per minute. The Committee have never seen a steam pump that was more satisfactory in performance, and they have no hesitation in endorsing its claim of superiority for the above purposes.—Awarded a silver medal.

Harrison's Rotary Steam Pump.—This steam pump is the invention of Chas. H. Harrison, of this city. It was in constant operation during the Exhibition, and was looked upon with much interest by the visitors, on account of the large stream of water discharged and the regularity of its motion. The Committee were informed that the pump exhibited had the capacity to raise 500 gallons of water per minute to a hight dependent on its velocity. It seems to be peculiarly adapted for raising large bodies of water to small hights, and also has the valuable quality of great durability in its construction. Usually there is much waste of power in pumps from the sudden changes of direction and velocity to which the water is subjected in its passage through them. The improvements in this pump are intended to obviate this objection. This pump is driven by one horizontal steam engine attached to the cylinder, the whole apparatus being arranged in a very convenient and compact form for wrecking purposes. We believe it would be found equally as effective for bilge pumps, or for drainage purposes, where the quantity of water to be raised is large, and the lift not too great.—Awarded a silver medal.

Woodworth's Steam Pump.—This steam pump, built by H. J. Booth & Co., Union Iron Works, San Francisco, is of excellent finish and worked well. This steam pump has established its own report throughout the United States, and needs no commendations from this Committee.

Foot-Lathe with Double Slide Rest, by Adolf Hecker, San Francisco.—This is a small foot-lathe calculated for iron, brass, and wood-turning. It is of neat design, good workmanship, well finished, and a credit to the maker.—Awarded a diploma.

Steam Engine by E. T. Steen, San Francisco.—One steam engine, of California make. It is twenty-five horse power, and no piece, except the fly-wheel, weighs over 550 lbs. It can be put up right or left hand without altering a single piece of its combination. The piston requires no adjusting, is always steam tight, and will not cut the cylinder.—Awarded a certificate of merit.

On Quartz and Mining Machinery.

Committee:

J. A. HOBART. JOHN ROACH. WM. H. SCOVILLE.

Hanscom's Crusher.—A small model only being exhibited at work, is favorably recommended by the Committee as deserving the award of a silver medal.

Crusher by Burgion & Johnson.—An incomplete model, in some particulars, which the proprietors admit to have been imperfect in construction, the which being remedied, the committee have no doubt will prove a valuable machine.—Awarded a certificate of merit.

Brodie's Crusher.—Apparently a valuable machine, but, not being worked, the committee are unable to judge of its efficiency.

Hammer Battery by Rix & Logan.—This machine is designed to do the work now done by the wet stamp battery. Its distinguishing feature is the revolving horizontally within the pan of several hammers, with their faces outwards, by jointing the ends of their handles to revolving arms, so that, while the hammers are drawn around, they swing outwardly, from centrifugal force, and strike against dies placed about the pan on the inside. These dies are so placed that each hammer strikes upon one and then leaps to the next, giving blows similar in every respect to common bammer blows, except that they are drawing. The machine can be so constructed as to give such weight and velocity to the hammers as may be desired, thus securing the most economical blow for the purpose required. The method of feed and discharge are of the simplest character, no hopper, feeder, or screws being used, the ore being shoveled into the pan, and the pulp being drawn from the center by a pipe. This battery contemplates a complete change of system, by dispensing with the heavy stamps and bed-plates usual to such machines. By the decrease of weight the cost of transportation and other expenses are materially lessened, which should create a great demand for this species of wet crushing battery. The committee have carefully examined the model, and, being satisfied with the quality and quantity of work done, in comparison with the small amount of power required, do recommend this machine as deserving a silver medal.

Roasting Furnace by William Bruckner.—For sulphurets or ores needing roasting, this seems to be a novel contrivance, subjecting the material to be treated to the direct flame of the fire, by continuous rotary motion, which, by a screw fan, constantly presents a new surface to the flames, thereby saving one-half, or more, of the time usually required in roasting the mineral. The condensors at the back of the revolving cylinder catch all vapors, except what may pass off at the chimney. In the opinion of the committee, these syphon-like condensers, as exhibited, are not sufficiently large to accomplish all that the inventor claims. The committee recommend the invention as deserving a silver medal.

Grinder by J. M. Beth, who exhibits a grinder of simple construction, and efficient as a working machine of easy manipulation, for which the committee award a diploma.

Knox Pan used as an Amalgamator and Separator.—For a recent addition of a steam bottom, in connection with this well known pan, the committee award a silver medal.

Hinkle's Grinder and Amalgamator.—A small model exhibited worked well. The grinding being against the sides and not on the bottom, the current is made towards the center. When at the top of the pan, or grinder, the pulp is brought in contact with a copper amalgamated plate, directing the current by both its surfaces, and intercepting the valuable metal. Large sized machines, on this principle, are constructed. The committee award a certificate of merit.

Strong's Union Pan.—This pan has double-reversing motion grinders. The lower grinder, on bottom of pan, by rapid motion, gives the pulp a direction towards the periphery on the upper surface of the grinders. Another set of shoes play or revolve in a contrary direction, having a tendency to check the fluid set in motion by the lower shoes, and thus, between these counteracting currents, the pulp is brought rapidly in communication with the grinding surfaces. In the opinion of the committee it is questionable whether these double sets of shoes are a benefit in proportion to the power which is necessarily required to work them.

Hepburn's & Peterson's Pan.—This is a good, solid, substantial pan, with steam bottom, capable, no doubt, of doing good work. The committee could not judge in that particular, from the fact that it was not set in motion.

Mining Summary.

CALIFORNIA.

SHASTA.—The Highland Company's last clean up, after a two weeks' run, netted $4,052.

The indefatigable Whiskytown company, which discovered and is prospecting the Knickerbocker lode, has discovered another lode on the hill on the south side of Whisky Creek. The rock is richer at a depth of nine feet than the Knickerbocker, and the lode is about sixteen inches in width, and well defined.

PLUMAS.—The Crescent company, says the *Union*, is crushing quartz from the Premium ledge, running twelve stamps on that rock, and it is averaging over $40 to the ton.

YUBA.—The Marysville *Appeal* complains that the Sacramento *Bee*, in an article on the mines of California, passes by Yuba as if it had no mines. It forgets our rich quartz mines at Brown's Valley, and that we have the best paying hydraulic claims on the Pacific coast. The Jefferson mill, at Brown's Valley, is paying larger relative dividends than any Nevada mine, and the hydraulic claims at Smartsville are yielding more gold annually than any mine in the State ever produced.

NEVADA.—We learn from the Grass Valley *National* that the Cambridge mine, adjoining the Lucky, has been sold to a New York company for twenty-four thousand dollars. The late owners, who have sold, are Con. Reilly, John Therny, Eugene Bogan, William White and brother, and P. Donnelly and brother. The mine is undoubtedly a rich one. The late developments in the "Lucky" have greatly added to the market value of the Cambridge, the purchase of which by the New York party may be considered a fortunate operation.

The Nevada *Transcript* says that F. Tilton, Esq., has sold a one-sixth interest in the Star Spangled Banner claim to C. Chandler, for $10,000. The purchaser was offered an advance of $1,000 on his purchase before he had it twenty-four hours. This mine continues to improve.

The Enterprise Company, at Sacramento city, are progressing finely with their new mill. Splendid ore is being taken from the bottom of the shaft. The company expect to declare their first dividend in February or March.

The mill of the California Mill and Mining Company is at work, and a clean-up will shortly be made.

The Territorial *Enterprise* says that the Enterprise company is already "well up in the figures," and that a foot of the claim was sold a few days since for $250, cash.

The Pacific claim of 1,000 feet, recently located, is showing some fine rock. As soon as the location was made the locators commenced work by taking out eighteen tons of rock, which they shipped to the French mill, at Nevada, Cal., and had worked, and the result was $1,310. A party of New York capitalists, says the Virginia *Union*, have offered $40,000 for the entire claim, but the company will not dispose of it for any such money. Mr. Myers is making preparations to work the claim early in the spring.

A letter from Summit City, dated Dec. 17th, says that the snow was eighteen inches deep, the weather fine; that the California mill is running regularly, and the work on the Winton mill is being pushed ahead rapidly, and will soon be ready for crushing.

SIERRA.—River mining, says the *Messenger*, is not quite suspended. Notwithstanding the freezing temperature, we notice that a crowd of Chinamen are at work below the bridge, laying out new enterprises in a mining way.

A Newark correspondent writes the *Messenger* that the Swift Sure, Nevada, North America, and Phœnix companies have taken out immense sums this summer and fall.

The Swift Sure company has been running for the last eight years, hardly paying expenses until within the last twelve months, when they struck the lead, and it is now one of the richest claims in the county. Its success is principally due to the untiring energy of Miles Scofield, the foreman and principal proprietor. He stuck to it from first to last, and Fortune at last crowned his perseverance.

PLACER.—The Auburn *Stars and Stripes* of December 20th, says that Mr. A. Harpending, of the Baker claim, at Whisky Diggings, from four days' run of his new mill of three stamps, took yesterday thirty-five pounds of hard amalgam. The rock crushed was a rotten quartz and slate. The ledge is 300 feet wide and 1,000 feet long, and is believed to be rich throughout its whole extent.

Mr. E. D. Barnes, Esq., of San Francisco, recently paid $10,000 for five-sixths of the Powell claim (gravel diggings), Placer County.

ALPINE.—The Silver Mountain *Bulletin*, in noticing the difference in the mining prospects of that district now and one year ago, says that where there were then employed twenty men, only, they now have as follows: In Silver Mountain District, 75 men working on shafts and tunnels; in Raymond Dist., 20; in Alpine Dist., 4; Summit City, 12; Mogul, 12; Monitor, 20; Silver King Dist., 6; making a total of 156 men.

The agent of an English company was recently on a visit to Alpine county, and expressed himself much pleased with the mineral indications of the district.

The Mendocino lode, located in Scandinavian Cañon, about one and one-half miles from Silver Mountain, has been purchased by B. Pilkington, Esq., who is acting as general agent for the Illinois and California G. and S. Mining Company. This company have large and valuable interests in Raymond District, about three miles from town, and judging from the operations of the company, under Mr. Pilkington's management, we are gratified to know that the Mendocino has passed into hands that will develop it immediately.

We learn from the Monitor *Gazette* that Capt. Collins, Superintendent of the Active Mining Company, is working all the force which he can put on to advantage. He expresses himself as much pleased with the prospects of the mine. The mill will be put up and made ready for running at as early a day as possible. The *Gazette* thinks the company will have cause to congratulate themselves on the choice of a manager.

A controlling interest in the Mayer company has passed into the hands of E. Arnold, Esq., the proprietor of a new desulphurizing process, already noticed in this paper. Mr. A. will proceed at once to open the vein and work the rock by his process.

A controlling interest in the Santa Eulalia Co. has been purchased by a Virginia (Nev.) company, and the work of development will be pushed vigorously.

The American T. and S. M. Company are getting under ground rapidly with their tunnel, the length being now 140 feet. Some very good ore has been taken out during the past week, from small veins and feeders, which become more numerous and larger as the ledge is neared. The St. Helena Company are about ready to cut their vein by a drift from their shaft to test the same. The claim is supposed to be an extension of the I X L and Buckeye.

CALAVERAS.—A correspondent of the Copperopolis *Courier* speaks highly of the present condition and prospects of the mines in Salt Spring Valley. The claim of Mr. John Hisenberger is spoken of as turning out very good looking rock, worth from $30 to $35 per ton. The Pine Log claim, near by, looks equally well. The Otis claim, owned by McKinsey & Co., is constructing an arastra, with the view of testing his claim, which good judges think will pay $200 per ton—from picked rock, we presume. The Esperanza Co. lately erected a 10-stamp mill, at the last crushing of which 20 tons of rock from their claim—the Alban Ranch claim—yielded 75 ounces of amalgam. The mill has since been idle; from what cause is not stated.

A correspondent of the San Andreas *Register*, writing from Murphy's, thinks it very singular that that section of the State should receive so little attention from capitalists seeking quartz claims. They have there numerous claims which have yielded well—from $25 to $150 to the ton from surface rock—the rock has been hauled to Angel camp. A small mill is greatly needed there, with all the late improvements for saving gold. One was recently commenced, but fell through for lack of means to finish it. A controlling interest in the mill, as it stands, can be obtained on very liberal terms by any party who will undertake to complete it.

A West Point correspondent of the Calaveras *Chronicle* writes that some fine lodes are located in Cedar Gulch, two miles from town; one in particular, which some time since paid from $30 to $40 in an arastra, has recently been purchased by Dr. Foster & Co., for a mere nominal sum, which now prospects, on further developments, as high as $150 to the ton. A mill will be erected on the same. Mr. Treppaniers, on the North Fork of the Mokelumne, has a splendid lode, from which a large quantity of rock has been taken. There are other good lodes in the neighborhood which afford fine opportunities for investments, for any persons who will undertake their development.

MARIPOSA—COPPER SMELTING.—According to the Mariposa *Free Press*, reports from Hamilton District concerning copper prospects still continue to be favorable. Several thousand pounds of the metal have been smelted during the last two weeks at the works of Heury & Co., ready for shipment. Quite a little town is springing up in the locality of these works at James' Ranch. Mr. Haskell has completed his smelting works at the Buchanan vein, five miles from James', and we understand is turning out copper at a rapid rate. The Buchanan is considered one of the best veins in the district, and bids fair to be a fortune to its lucky owners. We are glad to hear this; for the claim is owned by a clever, hard-working set of gentlemen.

AMADOR.—The Railroad quartz claim, located at Sutter Creek, says the Amador *Ledger*, is "proving" well. Last week they "cleaned up," and the proceeds realized a dividend of one hundred dollars to the share, after paying all expenses, and left a surplus in the treasury.

TULARE.—Ex-Governor Bigler has recently made a purchase of thirty-six quartz lodes, at Clear Creek, for an Eastern Company, at the very low price of $75,000. The purchase includes the Rhone, Lyon, and Rockfort—each of which, says the *Delta*, are rich paying lodes.

ESMERALDA.

The *Union* says that the managers of the Oxford Beta Tunnel Company are prosecuting their work with much energy, day and night; and while many other companies in a similar situation have become discouraged, and, in many instances, suspended operations, the Oxford Beta has been steadily worked, not having missed a day's work since its commencement, now nearly two years ago. The tunnel is in 600 feet, through the hardest rock to be found in this vicinity. Under the supervision of Mr. Lytle, who works in his turn with the men (such are the kind of superintendents we need to develop our mines; the kid-glove class are "quite showy on parade," but wont do when it comes to actual service), and superintends the work himself, a progress has been attained at a little over half the usual cost. The present indications are encouraging, and ere long the tunnel must cut the main mother ledge of this camp, at a depth that will warrant success, and bountifully reward the indomitable energy they have displayed in the prosecution of the work.

The Home Stake mill is completed, and the company have a large quantity of very rich ore out, which will, no doubt, speak for itself.

The Wide West shaft is progressing finely. The company have put in a pump which answers every purpose, in freeing the shaft of water.

The County Assessor's report, for Esmeralda, contains a list of mills, with their cost, power, number of stamps, etc., which we shall give more at length in a future issue. The mills are eighteen in number.

HUMBOLDT.

Important Sale.—The *Register* says that J. C. Fall, Esq., a pioneer Humboldter and a most energetic business man, has for the past year been in New York city, negotiating for the material wherewith to develop some of the many rich ledges which have been placed in his hands for that purpose. Many of those who have for years held on to good claims, endeavoring with small means to bring them in proper light before the men who have money, have found their efforts unavailing. To open even the richest silver mine requires coined money with which to operate. Mr. Fall has succeeded in engaging means for this purpose in several cases. He has about concluded negotiations for the Cauble Company's claim, Union Series—silver; also for the Diadem claim—rich in gold; and the Essex—a fine-looking silver ledge.

Messrs. Stratford & Ewing are putting work ahead in the Essex and Diadem, and they assure us that development is realizing the hopes the croppings induced. The Diadem is supposed to be an extension of the well-known Monroe ledge, which is probably the richest gold-bearing ledge in the State. Work is to commence forthwith on the Union Series. These ledges contain black sulphurets, similar to the ore of the Gem mine, in the same mountain.

The Silver Bullion Series, a fine claim in Indian District, has been disposed of—the management, at least—to an Eastern company. The claim consists of 1,050 feet in each of three parallel ledges, presenting well defined walls, and cropping out the entire length of the claims. This is pronounced a very promising mine.

Much interest is felt in the development of the Montezuma mine. It is said to be one of the heaviest bodies of argentiferous ore, apparently, in the State, and the center around which depend a hundred other veins of similar character. Its development is anxiously looked for by those who own these other ledges. Mr. J. S. Henning, C. E., has made a careful examination of the ledge, and reports favorably.

The War Eagle is a newly reported discovery, which is creating considerable talk.

IDAHO.

According to the Owyhee *Avalanche*, rich strikes, new discoveries and developments are so frequent that it is impossible to record them within the space in that paper which can be devoted to such matters.

This week, says the *Avalanche*, a mass of silver, streaked with a little quartz, was found in the Rising Star mine, Flint District. The silver is as pure as the assayed bars, and the celebrated Poorman is, in comparison, an ordinary ledge. The Morning Star mine is yielding immensely rich ore. The ledge, at the point from which the ore is now being taken, is one solid mass of black silver, the latter predominating. The original Hays & Ray is yielding ore of the same character, and equal in richness with the Poorman.

The masonry for Cosmos mill is about ready for the building. This company exhibit unusual energy and activity. Mr. Dewey, who is agent and general superintendent of the company, arrived from the East a few days ago, and is highly pleased with the "situation."

The Tennessee ledge is spoken of as being very promising. It is four feet wide, and assays from $75 to $125 per ton. The dirt which comes from the shaft is full of fine gold. Select a panful anywhere, and by carefully washing it a thousand very fine particles are obtained. A tunnel of 400 feet will tap the ledge at the same depth. The owners have a valuable mill site on Castle Creek, adjacent to the ledge.

The Shoenber mill is a perfect success. Its construction was commenced in July last, and it was completed on the 17th of November. It has two of Knox's improved iron batteries, five stamps each. The crushing capacity is 25 tons per 24 hours; it contains eight vats and eight amalgamators. Of the latter, four are J. M. Beath's patent, and four of Knox's. The mill is correspondingly supplied with agitators and concentrators. The engine is twenty-five horse power, and the machinery is propelled by one-half the force. A. F. Mœlla is chief engineer, and personally superintended the erection of the steam works. Mr. Mœllar stands at the top in his profession, and was many years employed by the Russian government on the public works in their American possessions. The amalgamating department is under charge of Capt. J. F. Miller.

Since our last, the foot-hills have been thronged with prospectors for diamonds, and for once have given quartz a brief respite. Among them may be numbered some of our most substantial citizens, and from the best information we can obtain, there is no certainty that the genuine gems have yet been found, but magnificent crystals have been, answering to the BOOK description. The hardest file fails to make an impression on them. The country is volcanic, and there is no reason to doubt their existence.

A correspondent of the Virginia *Union* writes thus from Ruby City, Idaho: There are eight quartz mines here, of eight and ten stamps each, busy at work. The Star Mill is engaged in crushing rock from Whisky ledge. One other mill belongs to the Oregon Steam Navigation Company, and is working ore from the Oro Fino Ledge. The others are crushing ore from the Poor Man's Ledge. There has been quite a number of locations of quartz leads made around this section; all of which are, in my opinion, good, but the great difficulty is the want of capital to develop them. The placer diggings do not amount to much; everything is quartz; people have it on the brain as bad as they did in Washoe in 1863. I expect to see Owyhee equal Virginia in population and wealth in two years.

VIRGINIA CITY AND VICINITY.

We have few items of particular interest, the past week, from this region. The Virginia *Enterprise* is publishing the reports of the different County Assessors as they come in. These reports contain a large amount of reliable statistical information in relation to the mines and mining interests of the State of Nevada, which we presume will soon be tabulated and placed before the public in a condensed form, when we hope to be able to use it.

Strike in the Yellow Jacket.—The *Enterprise* of Wednesday says that a vein of astonishingly rich ore has been struck in a shaft sunk in the 445 foot level of the mine. The stratum of ore is three feet in width and shows both free gold and native silver. A number of tons of this rich ore has already been taken out and sacked.

The Virginia City *Union* gives a very flattering account of the mining prospects of La Plata. Two mines are being worked. The first has been explored by an incline to the depth of 190 feet, and the ledge opened, showing it to be about four feet wide, with well defined casings. The rock assayed in the surface works from $288 to $1,200 per ton. That found in the incline, at the depth of 190 feet, bears the same character, and 200 tons are on the surface, which is about to be treated in the mill. The La Plata has not been explored to so great a depth; but the shaft discovers a ledge two feet in width, the quartz containing respectable quantities of the yellow bromide of silver.

MR. GOUGH says we sometimes wonder at the incivility of railroad conductors and post office clerks; while if we could know all the petty annoyances to which they are subjected, and the silly questions constantly asked of them by ignorant, stupid, and nervous people the wonder would be that they can be civil at all.

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the system.

San Francisco:
Saturday Morning, Dec. 30, 1865.

A State Mining Convention.

Pursuant to the request of several mining journals and representative mining individuals, the association known as the "California Mining Bureau," of San Francisco, through their Board of Trustees, have issued the following call for a Mass Convention of the miners of California:

RESOLVED, That a Mass Convention of the miners of the State of California, be and is hereby called to assemble in the city of Sacramento, on WEDNESDAY, the 17th of January, A.D. 1866, at 12 o'clock, and that any person engaged in actual mining operations shall be eligible to a seat in said Convention.

JOSEPH W. LOW, Vice-President.

J. D. WHITCOMB, Recording Secretary.
San Francisco, December 6, 1865.

THE NOVEMBER METEORIC DISPLAY.

Professor Newton, of Yale College, New Haven, with three other gentlemen, counted 430 shooting stars, during a space of 150 minutes, on the evening of November 13th. The time of observation commenced at five minutes before four o'clock in the morning. Of the number, 360 moved in paths diverging from the constellation Leo, and are therefore presumed to belong to the November group. The remaining seventy were moving in other paths, and are such as we see every night. The Professor says that—

"A large proportion of the meteors left phosphorescent trains. Three or four of these trains lasted over a minute. One star, which appeared to explode with a splendid green flame, left a track which slowly shortened itself, and floated away to the north, curling itself up into a crescent. The motion was not rapid to the eye, but as the train was probably as much as seventy miles high, the wind which carried it must have been blowing fifty or one hundred miles an hour. He expected to see as many more the next morning if the clouds did not prevent."

These meteors were doubtless all seen in the extreme outer confines of the earth's atmosphere; although the probable distance of only one is given—"seventy miles high."

Appropriate to the above, we would state that we placed the *memoranda* of the Santa Barbara meteor, which was seen throughout the central portion of this State on the 12th of July last, in the hands of Professor Jackson, just previous to his leaving for the East. We received a letter from him a short time since, in which he says: "I have computed the Santa Barbara meteorite, and find it to be 45½ miles above the earth.

THE DISPLAY AS SEEN FROM VIRGINIA.

The Richmond *Times* of November 14th, speaks of the display in that vicinity, in the following language:

One of the grandest meteoric exhibitions which the people of this section have witnessed for a number of years, occurred on Sunday night, lasting from about ten o'clock P. M. till between three and four o'clock yesterday morning. During the whole of this time the heavens were lit up by innumerable shooting stars, frequently leaving trails behind them so brilliant as to light up the streets for several seconds, and gradually fading away like the sulphurous stroke of a lucifer match when scraped upon the wall in a dark room. Cannot some of our celebrated savans, who have given the subject consideration, explain this phenomenon.

REESE RIVER.

We learn from Dr. DeGroot, and other sources, that favorable reports are constantly coming in from the outside districts of Reese River, especially to the south of Austin, where the lodes appear to be larger and equally numerous, and as rich as in the immediate vicinity of that city. The wild and speculative excitements which have hitherto prevailed in Reese River, though to a less extent there than in Virginia City and vicinity, have now pretty much passed away, and the mining interest is assuming the appearance of permanent prosperity, with evident indications of a more business-like management in future. Eastern capital is flowing in abundantly, to aid in the development of the mines, and it is generally accompanied with a careful, though energetic superintendence, which speaks well for the future.

The Eureka District, seventy-five miles to the eastward of Austin, has recently been discovered by Mr. A. Monroe. It is described as a very promising mineral region. The ores are said to be of a class which can probably be most economically reduced by smelting, and for this purpose large supplies of timber everywhere abound, interspersed with good farming and grazing land.

The White Pine District is also a recent discovery, its precise location at first being kept a secret, but it is now known to be about ninety miles southeast of Austin. Many of the ledges are said to be of gigantic proportions, generally well defined with bold outcroppings. Those which have proved the richest under tests are from six to eight feet thick. They yield both gold and silver. A correspondent of the *Reveille*, in company with Prof. Widney and T. J. Murphy, has recently visited the district and given it a cursory examination. The professor declares it to be one of the most remarkable in that region. The mountains for miles around are covered with a heavy growth of white pine of mammoth dimensions. About 100 ledges have been recorded, and a town laid out, which the correspondent of the *Reveille* thinks may eventually become a rival to Austin.

The mines in the Yankee Blade and Amador neighborhoods are being rapidly developed and proving themselves worthy of attention. Through the remarkable Yankee Blade basin, says the *Reveille*, are many hundreds of veins, of various sizes, running in all directions, all of which appear to be productive. The county rock is a soft granite. The mines of this district are in a rapid progress of development. At Amador affairs are also said to be rapidly improving. The mill of the Coral and Vanderbilt Co., is nearly completed. This mill will reduce their rock by the use of one of Gardner's Crushers, instead of stamps. The mill is said to have worked exceedingly well, experimentally, in New York. The superintendent of this company will confer a favor upon us and the mining public by sending us a report of the working of this new crusher, after it shall have been thoroughly tested.

Copper Mines.—The *Reveille* thinks that none of the copper mines yet discovered in Central Nevada will pay for working, or prove of any value until the facilities for constant and low transportation are afforded. But when the day of the railroad arrives, with its cheap and uninterrupted communication with the east and west, the copper mines of that region will constitute one of its chief sources of wealth.

We have before us a large number of "clippings" from the *Reveille*, showing the progress of the various mines in and around Austin, the aggregate of which evinces a most commendable degree of energy in the development of the individual interests. We have space this week for the following only, which we have also been obliged to greatly condense:

The Silver Chamber has recently been sold to Eastern capitalists, who have appointed Mr. J. W. Varney as their superintendent. Under his charge has also been placed, by the same company, the Mollitor, Osceola, Eastland, Maximilian, and San Jose. Work will be resumed on three of these claims immediately. The Ware mill, in Cedar Ravine, for a long time closed, will be opened and put in operation by Mr. Varney, and will be supplied with ore from the company's mines. The Silver Chamber is said to be a very valuable mine; numerous small lots of ore have been worked with a yield of from $1,000 to $1,700 to the ton. The vein is well defined, being from one to four feet in thickness.

The Tesoro mine is turning out some very rich rock, where the vein has just been struck at a depth of 100 feet. The ore is remarkably heavy, and covered with iodide of silver, and it is estimated that it will assay as high as $300 to the ton. This quality of ore is fourteen inches thick in the large vein of the Tesoro.

The Sterling company's mill is finished, and is pronounced one of the finest in Reese River, although there are others of more magnificent proportions. It has been constructed under the management of Mr. Daniel P. Bell.

NATIVE IRON.—Near Dog Valley Hill, on the Henness Pass route, says the *Territorial Enterprise*, is a large vein of quartzose rock, which has puzzled our miners ever since 1860. In 1861 a company took up a claim, but could not make out what it contained, and returns from rock sent to California for assay were very contradictory and unsatisfactory. The ore contained a malleable metal which some supposed to be platina, and for a time there was a good deal of excitement among owners about the lead. The claim finally passed into other hands, and the new owners determined to find out what their ore contained, sent a quantity to Rickard & Wiegand, assayers, at Gold Hill, for chemical analysis. The result shows the rock to contain a small per cent. of gold and silver and a very considerable quantity of native iron, something rarely seen. This was the malleable metal which had so long puzzled the prospectors. Although those who located the mine may not have fortunes in it, they have the satisfaction of knowing that they have discovered something new, and have got rid of one mining perplexity. Hereafter they will not bother their brains about native iron.

HUNTER'S CONCENTRATOR.—Our attention has been called to the following testimonials concerning the satisfactory working of this noted machine. Our miners generally are in need of more simple machinery for saving gold, and we cheerfully give Mr. Hunter's invention the benefit of these statements from practical operators:

SAN FRANCISCO, Nov. 18, 1865.

I have concentrated about four tons of tin ore in Hunter's Concentrator. It worked perfectly satisfactory, both for quantity and quality, and I can recommend it for the concentration of all kinds of ores. JAMES WALSH.

GRASS VALLEY, Dec. 18, 1865.

This is to certify that one of Hunter's Concentrators is now running in the Empire Mill, Ophir Hill, Grass Valley. The capacity of the machine is from five to seven tons per day, separating the sulphurets in the most perfect manner. The machine requires scarcely any attention; about one-sixth of a horse power is sufficient to run one machine. We freely recommend it as the only perfect concentrator we have ever seen, and it fully meets with our most sanguine expectations.

S. W. LEE,
Sup't Empire Co.

We are informed that the concentrator at the Empire Mill is now taking the sands of two batteries, which it will continue to work until another machine, already ordered, can be forwarded to the mine from this city.

ANNA CARINGHER, of San Francisco, has sued Wm. Daniels, of Grass Valley, for breach of promise and seduction, and asks the Court to give her $100,000 damages.—*Ex.*

Mr. Daniels is one of the proprietors of the famous Allison Ranch mine, and is a nice bush for Anna to beat; but will she catch the bird?

BRIDGING THE MISSISSIPPI AT ST. LOUIS.—On Monday last a bill was introduced into Congress to bridge the Mississippi river at St. Louis. So the telegraph reports.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

OFFICE OF THE MINING AND SCIENTIFIC PRESS—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The first question that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may receive patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensue. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, our Washington agent has access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor and responsibility only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a nature. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & CO., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready, we send them to the inventor, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, whon it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delays on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 y'rs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every application for a patent, for seventeen years...	15
On every caveat.....	10
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

N. B.—We make out our own forms for applications, etc., and would respectfully inform all parties that we have no printed blank forms for sale.

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

SAN FRANCISCO, SATURDAY MORNING, December 30th, 1865.

There is no new feature in the condition of the money market, and the supply of capital continues abundant, at rates of interest current for some time past. Transactions in mercantile circles are more restricted than usual, owing to the approach of the new year, and the operations of the Stock Exchange do not now involve much assistance from outside sources.

Receipts of treasure from domestic sources during the week amounted to $850,000, making an aggregate of $4,150,000 since the 1st instant. The bullion product of California during the year 1865, will probably exceed $28,000,000, and that of Nevada will amount to some $14,500,000. The treasure product of the latter amounted to about $16,000,000 last year.

Bullion was in fair request for the steamer of to-day, but the market has been well supplied since the temporary closing of the Branch Mint, and gold bars were sold yesterday at 830@840. Silver is quotable at about par to ½ ₱ cent. premium for bars of average fineness.

The mining share market has been a little irregular this week, but most leading stocks are rather firmly held, and the late advance has, for the most part, been well maintained. Advices from a number of claims continue favorable, and the year will close upon much better prospects for the future than were predicted by a certain class of croakers a short time since.

The aggregated recorded sales of Shares, etc., at the Stock and Exchange Board during the year 1865, amounted to $47,369,092. The smallest weekly sales amounted to $424,846, and the highest to $1,580,910, the average being about $910,000 per week. The total sales at the Board in 1864 amounted to $36,385,650, showing an increase in the transactions this year of $10,379,440.

Gould & Curry met with small sales at $900@$295, and is now held at $925. Receipts of bullion from the mine for the current month will amount to some $160,000, and a dividend of at least $40 per foot is confidently anticipated next week.

Savage declined from $850 to $780, seller 30, rose to $900, receded to $790, rallied to $860, and closed at $835. Within this range 135 feet were sold. The winze sunk from the 5th level in the North Potosi chimney is now down some 50 feet in first-class ore. This is an important development, and apart from the promising character of other portions, would of itself give a new lease of life to the mine. The suit of Chase and others against this company, claiming some 65 feet of ground, which was decided nearly a year ago in favor of defendants, has been re-opened by the Supreme Court of Nevada, and a new trial ordered. Receipts of bullion from this mine during the month of December will exceed $150,000. The net profits will, it is said, amount to some $75,000, and reduce the indebtedness of the company to about $100,000.

Yellow Jacket has been actively dealt in, and nearly 200 feet changed hands; advancing from $450 to $530, receding to $460, seller 30, rallying to $590, dropping to $525, rising to $580, and selling yesterday at $530@550. During the week ending 18th December, 650 tons of ore were extracted, and 670 tons were worked (at company's mill), yielding $20,959.44, or an average of $32.23 per ton. The prospecting shaft sunk from the 430-feet level in the northern part of the mine, is now down 25 feet in good ore throughout this depth; and in the bottom of this shaft first-class ore has been met with. Favorable indications have been found in the drift south from the Central Shaft (430-feet level), and also in running from the new shaft on the 280-feet level.

Crown Point is in better request, and some 53 feet were sold within a range of $450@550, closing at about $520, seller 30. During the week ending December 22d, 283 tons of ore were raised to the surface, and some 800 tons in all have now been accumulated, which, it is thought, will keep both mills running until certain repairs to the main shaft can be made.

Ophir fell from $370 to $345, rose to $375, dropped to $350, and sold yesterday at $370@365. From December 1st, 1864, to the 1st of December this year, 3,641 tons of ore and tailings were treated at the Reduction Works, and 7,634 tons of ore were reduced at the River mill, producing in the aggregate $484,181. During that period $179,000 were derived from other sources, and $140,000 were obtained from the late assessment, making the total receipts for the past year, $793,767.03. The present indebtedness of the company is less than $40,000, and their assets are valued at $441,000 over and above all liabilities.

Hale & Norcross fell from $300 to $210, rose to $400, steadily declined to $290, and sold yesterday at $270@280. In drifting north and east from the incline, at a depth of about 700 feet, a substantial body of quartz has been penetrated, which is thought to indicate the close proximity of pay ore.

Alpha rose from $275 to $315, declined to $205, rose to $240@$260, and closed at about $240. The assessment of $50 per share ($200 per foot), levied on the 19th instant, makes in all, thus far, some $920 per foot, upon the stock of this company.

Belcher has been dealt in at a range of $200@145 per foot, closing at $175. An assessment of $100 per foot was levied December 14th.

Empire Mill and Mining Company rose from $205 to $270, then fell to $250, and sold yesterday at $240. The body of ore on the upper level shows some improvement, and is now some 20 feet wide. The mine is yielding some 50 tons of ore daily, and receipts of bullion this month will exceed $40,000.

Chollar-Potosi fell from $150 to $140, rallied to $162, and was sold yesterday at $165@177½. During the week ending December 22d, 485 tons were sent to custom mills, 191½ tons were sold at $8, and 121½ tons at $5 per ton. Some 15 tons first-class ore were also sent to the Mexican mill. A new station is being opened some 60 feet below the Potosi tunnel, and it is proposed to run a cross-cut 60 feet still deeper.

In the old workings of the Chollar, between the 3d and 4th stations, the seam of ore alluded to last week have now been traced 50 feet in length, and 15 feet in depth. The new shaft is sunk and timbered to a depth of 523 feet, and the drift toward the ledge is in some 70 feet.

Imperial rose from $103 to $117½, then sold at $121, and was dealt in yesterday at $122@130, some 1,500 shares in all changing hands. The report of the Committee of Trustees recently on a visit to the mine is said to be favorable, and represents that there are four months' supply of ore in the different levels, with a good prospect for the future at greater depths. The receipts of bullion thus far the current month are slightly in excess of a like period last month.

Bullion rose from $25 to $35, fell to $32, and closed at $40. Confidence was sold at $24@26, and closes at about $40 asked. Overman rose from $40 to $60, then sold at $65, and was dealt in yesterday at $80@70.

The aggregate sales of Stocks, since Saturday last inclusive, amounted to $710,896.

A Flouring Mill at Colfax.—Several experienced Grass Valley mill men are making arrangements to start a flouring mill at Colfax. A mill located at that point, within a convenient distance of the agricultural districts of the Sacramento Valley, and near the fertile ranches of the foot-hills, could scarcely fail to be a profitable investment. An excellent market would be obtained in the mines, and beyond the mountains, for the articles produced at the mill.

A Good Name.—Morris Ketchum, the father of the great defaulter in New York, is reported to have said to his creditors, "If I could have my son back, with his good name, and you were all paid in full, I would die content." Such is the last ambition of great financiers. A lifetime of activity, an ample fortune its reward; and now all would be given for a son's good name. Young men—fast young men—think of this.

The first soldier mustered into the United States service to suppress the rebellion is still in service, and on duty at Washington. He was sworn in April 10th, 1861, orderly sergeant of the Washington Light Infantry, and his name is James Coleman.

Genius is simply a natural aptitude possessed by a person for learning how to do some particular thing better and more easily than other persons.

Our commercial cities are rapidly heaping up riches. Boston is valued at four hundred million dollars; Philadelphia is estimated at six hundred millions; and New York is worth about as much as both of them combined.

GROCERS EVERYWHERE

SHOULD ADD TO THEIR ASSORTMENT OF GOODS

THE STANDARD

WASHING POWDER,

Which has become, since its introduction in this State—about twelve months since—with at least ten thousand Families, an INDISPENSABLE of Household Economy. No person, after trying our

Washing Powder,

Will ever be without it—NO OTHER SOAP NEEDED—Harmless to the Clothing, CHEAP, of quick results, and a THOROUGH CLEANER. It is every way preferable to Soap. TRY IT! Manufactured by the

STANDARD SOAP CO.,

23v1l-1m 207 Commercial street San Francisco.

A STEAM ENGINE!

18-INCH CYLINDER, FOUR-FOOT STROKE, IN PERfect Order. Can be seen running at the San Francisco Pioneer Woolen Factory, Black Point. Inquire at VULCAN IRON WORKS, 137 and 139 First street, or to

HEYNEMANN & CO.,

26v11tf 311 and 313 California street.

Important to Miners.

NEW PATENT ROASTING PROCESS.

I AM NOW PREPARED TO OFFER TO THE MINING community a New Roasting Process, which has been approved as novel and beneficial by the best authorities in Europe. A Furnace can be erected in a few days at a trifling expense, and one man is able to Roast ten tons of Ore or Concentrated Sulphurets per day,

MORE COMPLETELY AND CHEAPER

Than any other Process. All the Sulphur is saved, by being converted into Bisulphide of Carbon, which is a valuable product, and will pay nearly all expenses.

For particulars, apply to

J. MOSHEIMER,

26v11-3m 423 Washington street.

HENDY'S

IMPROVED BLOW-PIPE.

This Convenient Helpmeet

—TO THE—

ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the Press of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth-piece and the pipe, enabling the blower to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continuous current of air is forced from the nozzle of the pipe by the mere contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

Price, Complete.....$5.00.

PERPETUAL CALENDAR

Shows without hesitation

The Date or Day of the Week

—OF—

Any Day or Date in the 19th Century,

Rendering it a prompt and accurate

ASSISTANT RECKONER,

Besides answering fully
And Conveniently
All the Purposes of the
Ordinary Counting-House Calendar
During the Nineteenth Century.

The Calendar for each month is arranged in a single column, as in the regularly published (book) Almanacs, rendering it more easy for reckoning, in most instances, than the customary Counting-House form of Calendars.

It is simply understood.
It affords the same reference from year to year.
It avoids errors.
It occupies a convenient space.
Its usefulness increases by use.
Once used it becomes indispensable,
It is worth one hundred times its cost.

Its cost is trifling, but its value is constant and perpetual. For a single reference it is often worth ten times its cost. In financial, legal and business transactions, it saves many grave and important mistakes.

—OF THE—

Mining and Scientific Press

Issued every Saturday. Each number contains 16 pages and 64 columns (size of Harper's Weekly).

PUBLISHED BY

DEWEY & CO.,

Patent Agents, Publishers and Job Printers
505 Clay Street, San Francisco.

THE ELEVETTH VOLUME

Of the Mining and Scientific Press commences under advantages most gratifying to its publishers, who assert, with pleasure, that a continued improvement in this journal may be anticipated by its numerous and rapidly increasing readers.

We shall continue to devote a large space in our columns to the various and best methods of treating ores and saving gold and other precious metals in every form, furnishing valuable hints to millmen, prospectors, oil-workers and miners generally, not to be found in any other publication.

New machinery, latest inventions and discoveries, and all matters pertaining to the mechanical, manufacturing and industrial resources of the Pacific States, will receive careful attention.

Stock market reports will be published as received from the official records. Our carefully compiled "Mining Shareholders' Directory" will prove a faithful monitor to parties holding stock, and a desirable record for reference to brokers.

Friends pleased with our efforts in the publication of the Press can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

1852. 1866

A NEW VOLUME.

Fourteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, The Golden Era is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

The Golden Era is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

The Golden Era is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render The Golden Era a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome The Golden Era as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the Golden Era, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the Golden Era are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

"THOUGHTS AND THINGS"

APPEAR WEEKLY IN THE GOLDEN ERA.

Read "Thoughts and Things" in the Golden Era.
"Professor Clearquill." in the Golden Era.
"Dogberry," in the Golden Era.
"Alice Mason," in the Golden Era.
"Hugh Humphrey," in the Golden Era.
"Bill Dadd," in the Golden Era.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

MINING LAWS AND FORMS.

Third Edition revised and enlarged.

Compiled by H. B. CONGDON.

THIS Edition contains all the laws of the *STATE OF CALIFORNIA* and *NEVADA TERRITORY*, relative to Mining Corporations together with the Mining Ordinances of Mexico, complete; Digest of Decisions of the Supreme Court; Forms etc. 16 mo. flexible cloth, 192 pp. $2.50.

Published by H. H. BANCROFT & CO.

A young lawyer, ejected from Wallack's theatre for creating a disturbance, sued for damages. The court decided that it is a part of his contract, when an individual enters an assemblage, to keep perfectly quiet.

Metallurgy.

MOSHEIMER'S CONCENTRATOR

RECEIVED THE FIRST PREMIUM

From the ROYAL POLYTECHNIC SOCIETY, in Cornwall, and was highly recommended by the Commissioners as the most Simple and Effective Concentrator for all kinds of Ores.

Every Quartz Mill ought to have them, as they not only save Gold and Silver, but also the Quicksilver and Sulphurets, without extra labor. They can be built entirely of wood at the mine, and will separate more perfectly in one operation, than any other Concentrator in use. Apply to

J. MOSHEIMER,
23v11qy 423 Washington street.

EUROPEAN METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, fyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying to the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

SHERMAN DAY,

Mining Engineer,

No. 56 Montgomery Block, San Francisco,

Will examine, survey and report upon mines, and conduct and advise concerning investments in mining property, or the machinery management and expenditures of mines.
22q*

To Mining Companies.

A GENTLEMAN OF MUCH EXPERIENCE AS A MINing Superintendent, in England, Spain, and on the Pacific coast, and one intimately acquainted with every department of mining, and with nearly every class of mineral, is desirous of securing a position as Superintendent of some mining operation in California or Nevada. The applicant was for four years Superintendent of the New Almaden Quicksilver Mine, in this State. The best of reference given on application at this office.
San Francisco, Oct. 12, 1865 .5v11tf

A Business Compliment.

PETALUMA, Oct. 4, 1865.

MESSRS. DEWEY & CO.—Gentlemen: Your note informing me that my patent for Crushing and Baling Machine is ordered to issue is at hand. Please accept my thanks for the prompt and business-like manner with which the case has been conducted, and inclosed find twenty dollars for balance Government fees. Respectfully, etc.

JACOB PRICE.

AT THE

OFFICE OF THE MINING AND SCIENTIFIC PRESS

No. 505 Clay Street, corner of Sansome.

Blanks for Mining Companies, Secretaries, Shareholders and others, always on hand, or printed to order, at our office.

Among others are those of the following forms:

Shareholder's Proxy.

Know all men by these presents, that I, ... do hereby constitute and appoint ..... my attorney and agent, for me and in my name, to vote as my proxy, at a meeting of the ..... Mining Company, to be held ..... 186 , according to the number of votes that I should be entitled to cast were I there personally present.

In witness whereof I have this day hereunto set my hand and seal. .....[Seal]

Dated 186

Assessment Notice.

..... Company

.....

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the ..th day of ....., 186 , an Assessment of .....per share was levied upon the Capital Stock of said Company, payable on the ..th day of .....186 , in United States gold and silver coin to the Secretary.

Any stock upon which said Assessment shall remain unpaid on Saturday, the ..th day of ....., 186 , will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on ....., the ..th day of ....., 186 , to pay the delinquent Assessment, together with the costs of advertising and expenses of the sale. By order of the Board of Trustees.

..... Secretary.

Office.....

NOTICE.—There are delinquent, upon the following described Stock, on account of assessment levied on the ..th day of ..... 186 , the several amounts set opposite the names of the respective shareholders as follows, to wit:

Names.	No. Certificate.	No. Shares.	Amount.
Theophilus Thistle	23	14	$140 00
Peter Pipe	2	3	30 00

And in accordance with law and an order of the Board of Trustees, made on the ..th day of ..... , 186 , so many shares of each parcel of said stock as may be necessary, will be sold at the.....

....., on ....., the ..th day of....., 186 , at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

..... Secretary.

Office.....

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled, by mail or express, as may be desired.

To Publishers.

An editor and practical printer, of good experience and recommendation, desires a situation and will accept a moderate salary on trial. Address this office.

RICHARDSON (OF THE COLFAX PARTY) ON CALIFORNIA POLITICS.—In all this wrangling [about the Senatorial election] the one only vital point seems to be quite forgotten. If California had always chosen Senators and Representatives wisely, the cars would run to-day from ocean to ocean! What she wants now, as always, is the man who can most hasten the Pacific Railroad—that innovation which will revolutionize the world's exchanges and traffic, make New York acknowledged queen of cities and San Francisco her eldest sister—that magic key which will unlock the Golden Gate, and send surging through its rocky portals a world-enriching tide of travel, commerce, and christian civilization.

PHILADELPHIA AGENCY,

Parties wishing to subscribe or advertise in the MINING AND SCIENTIFIC PRESS can be accommodated by calling upon our Agent, Mr. TURNER HAMILTON, at the Assembly Building, 106 South Tenth street, Philadelphia, Pa., where samp copies of our publications can always be found.

Traveling Agent.

MR. ROBERT LATTIMORE is now on a canvassing tour for the PRESS through Butte, Colusi, Tehama, Shasta, and Siskiyou counties, and we recommend him to the favorable consideration of our friends.

To Blacksmiths.

An excellent, strong lad, from the interior, 17 years of age, desires to learn the Blacksmith's trade. His parents wish him to engage with a reputable firm, and learn his business thoroughly. Address, or inquire at the office of the MINING AND SCIENTIFIC PRESS. 2v11tf

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

25v9q JOHN LOCHHEAD, Practical Engineer

WHAT IS IT?—The Monitor *Gazette* says that the Leviathan Company have struck a lode or vein of ore in their tunnel which puzzles all who have inspected it, as to its character. There appears to be a suspicion that it is copper. A large stream of water was opened giving most unmistakable evidence of a lode of some kind. We have repeatedly given notice that whenever any peculiar mineral is struck, the name or character of which may be unknown or uncertain to any in the neighborhood, we will cheerfully examine and analyze it, so far as may be necessary to determine its character and return the results to our correspondents free of cost—they sending the sample to us free of expense. We again renew the offer, and should be happy to hear from our friends in Alpine, and resolve their doubts, if any still exist.

The Fall River *Monitor* says that Samuel T. Sanford of that city has obtained a patent on a machine for the manufacture of shingles, which is capable of turning out from 100,000 to 125,000 per day, while those now in use can manufacture but about 10,000 to 12,000.

What "They Say" of the Mining and Scientific Press.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the PRESS, and would like to have a full file.—[Napa Reporter.

The public should support the enterprise of the MINING PRESS, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

Under the management of Messrs. Dewey & Co., the PRESS has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

A good paper for this country.—[Humboldt Register, Nu.

Those who would have a good paper of this character, should subscribe now.—[Marysville Appeal.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will be second to no scientific record now published on this continent.—[Los Angeles News.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The PRESS fills the bill.—[Reese River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

Interesting and important to miners and Mountain men. [Butte Record.

The publishers intend to make it the "Scientific American" of the Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information to the pick and shovel fraternity.—[Trinity Journal.

Should be taken by every man owning "feet" [and brains] in this State.—[Beacon.

In no other ten journals can the reader find the same amount of reliable mining news as in the PRESS.—[Contra Costa Gazette.

Every stockholder in different mines will find it will pay to take and read this mining journal.—[Contra Costa Gazette.

The PRESS is to the Pacific Coast what the "Scientific American" is on the Atlantic. It deserves its success.—[Aurora Daily Times.

It is fully up to the times, and furnishes the latest mining improvements and intelligence.—[Calaveras Chronicle.

Every miner should subscribe for the PRESS.—[Calaveras Chronicle.

It presents a channel through which all mining notices may be cheaply consolidated into one sheet for the convenience of all stockholders.—[Mountain Messenger.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics. [Placer Herald.

Just and True Economy

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEES and SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by ONE-HALF than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it

Yosemite Silver Mining Company, Oro Flao District, Humboldt county, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of December, 1865, an assessment of one dollar and a quarter ($1.25) per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, 402 Front street, San Francisco, or to J. T. MACLEAN, Superintendent, Star City.

Any stock upon which said assessment shall remain unpaid on Saturday, the 20th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 6th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

S. O. PUTNAM, Secretary.

Office, 402 Front street. dec23

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

GYPSUM FOR BUILDING MATERIAL.—In the vicinity of Surprise Valley, Nevada State, is an extensive quarry of gypsum, perfectly crystalized, and as transparent as blocks of ice from the clearest pond. This rock naturally breaks in perfect squares, and without cutting, can be used for building purposes. Several houses will soon be erected of this material, and it is thought no windows will be required, as the blocks of gypsum will admit light. A building constructed of this material would certainly present a splendid and fairy-like appearance.

THE Raleigh *Standard* says :—"Never was there a war entered into so suddenly, without thought and reflection—never a war that was conducted with more determination, valor and desperation—never a war that collapsed so suddenly and thoroughly," as the great rebellion just closed.

A MAN named John Bunyan was recently summoned before a magistrate because he would not "move on." The magistrate remarked that he was surprised a man bearing the name of Bunyan should be wanting in "progress."

A MONUMENT is being erected to the memory of Shakespeare, at Stratford-on-Avon, which is to be 100 feet in hight and 36 feet broad at the base, and ornamented by about 40 statutes of Shakspearian characters.

Economy in Advertising.—THE MINING AND SCIENTIFIC PRESS is the best and most ECONOMICAL mining advertising medium in this city. Our terms are less than ONE HALF the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The PRESS contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

Deserved Testimonial.

GRIZZLY FLAT, Oct. 18, 1865.

MESSRS. HUNGERFORD & HENDY—*Gentlemen:* We have run your Concentrator for several days past, in our 5-stamp Mill, and, as far as can be ascertained at present, it is a perfect success. When running at the rate of from two hundred and ten to two hundred and twenty-five revolutions per minute, we have lost neither quicksilver nor sulphurets. Formerly, when using copperplate riffles and blankets, we found that in spite of the utmost precaution, quicksilver would escape over them all. Wishing you all success, we remain Your obedient servants,

E. A. BIGLER.
S. F. DAVIS.

MINERS

Who wish to erect Quartz Mills, Concentrating or Smelting Works, will find it to their interest to consult the undersigned, as to the best and cheapest mode of Reducing Ores. Being acquainted with all the modern improvements of Europe and America, in Mining, Machinery and Metallurgy, I undertake the erection of any kind of Works, and warrant their successful operation.

Gold, Silver and Copper Ores bought in any quantity.

Assay of Ores made by a new Fire Process in half the usual time, and at half price.

Apply to J. MOSHEIMER,
23v11qy 423 Washington street, San Francisco.

QUARTZ OPERATOR'S HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,
Authors and Publishers.
BOUND IN CLOTH—144 PAGES, DUODECIMO.

THE QUARTZ OPERATOR'S HAND BOOK is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

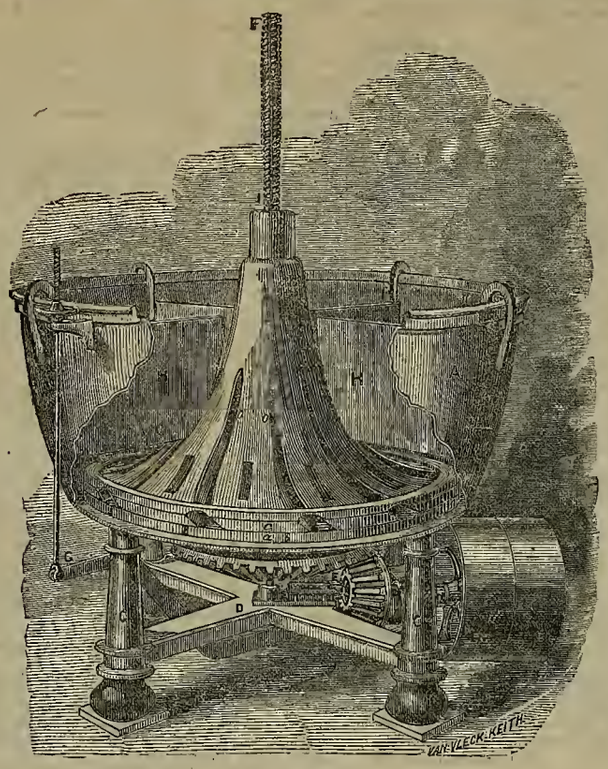
The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable QUARTZ MINER'S HAND BOOK.

The Table of Contents of this book will be found on page 416 of the MINING AND SCIENTIFIC PRESS of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings,

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed,* are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works.
WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

WHEELER & RANDALL.

WHO MAKE THE FASHIONS.—All the world knows that Paris sets the fashions for the people everywhere. In a late speech in the French Senate, M. Dupin thus stated what particular class in Paris were the originators of the fashions. M. Dupin said: We speak of courtezans who exhibit themselves in our public places. Yes, we behold them in brilliant equipages to attract public attention. And what does our high society do? Why, it looks on, accepts them as its models, and it is precisely these women who give the fashion to the ladies of fashion. These are the persons whom they copy, and such is the exemplo given by high society.

A BOSTON gentleman has recently imported a watch, made by James Hardin in Switzerland, from an original design of the Boston gentleman. Its cost is $3,000, the works alone costing $1,500. It has been some two years in process of manufacture.

Removal.

The Office of the MINING AND SCIENTIFIC PRESS has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Mantle Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive JOB PRINTING OFFICE.

San Francisco, April 10th, 1865.

Oakland Water-Cure.

APRIL 1ST, 1864, WE OPENED A HYGIENIC BOARDING House and Ladies' Health Institute in Oakland. The great advantage we have experienced since that time, in the treatment and cure of all those diseases peculiar to females, as well as those common to all, over that of San Francisco, induced us to give up the treatment of gentlemen in the city. We have accordingly removed our entire Bathing, Electro-magnetic, and Gymnastic Apparatus, which we used especially in the treatment of males, to our Health Institute across the Bay, and have found, after a trial of seven months, that gentlemen as well as lady patients recover, at our Fountain Farm Cure, one-third faster than in the city of San Francisco. The climate here is the most even and bracing to be found in the State. The grounds command a view unsurpassed in the world. The Institution is furnished with an abundance of pure, soft water, from numerous springs; and we now offer to Ministers, Teachers, Lawyers, Miners, Merchants, Mechanics, Farmers, and all other worthy persons, who desire to try the advantage of the only *rational* system of medicine, the hospitalities of our Hygienic Home and Cure. Young men who have become debilitated or lost their health by excesses, exposure, or enervating habits, contracted through ignorance of Physical Laws, may with us find more of the encouragements they need, and means that will restore them to health, than elsewhere in California.

We claim for Water-Cure and Hygienic Medication superior advantages over all systems of drug medication in the cure of all disorders, whether acute or chronic; that it is followed by none of those debilitating diseases, such as Piles, Chronic Diarrhœa, Torpid Liver, Constipation, intense Nervousness, Neuralgia, etc., nor those terrible secondary Diseases, known as Varicose Swelling of the Veins, Necrosis, or Decaying of the Bones, Ulceration of the Limbs, Mercurial Rheumatism, Urethal Strictures, etc., which we well know result from the free use of mercury and other metallic drugs, together with stimulants and vegetable poisons given to overcome acute diseases.

The Oakland Water-Cure and Eye Infirmary is by far the most complete in its facilities for the cure of all diseases commonly treated in all Eastern Water Cures of any like establishment on this coast, and the only one in California conducted according to the Theory and Practice of the New York Hydropathic College. We use all forms of Warm and Cold Wet Sheet Packs, the Electro-Chemical Bath, Sitz Baths, Improved Sitz Baths, Douch Baths, a Patent Spray Bath, and Magic Baths. The last named was instituted by Dr. Smith with special reference to the cure of those diseases peculiar to miners, namely: Rheumatism, Inflammatory or Chronic, Stiff Joints, Paralysis, Mercurial, Lead, and Oak Poisoning. It is a sure cure for Ague and Fever. It aids more than any other Bath we have yet used in eradicating all kinds of drugs and infectious poisons, and in the cure of all disorders induced by exposure to dampness and water, foul air, absence of light and electricity, retorting metals, the malaria of rivers and low marshy grounds. Where there was a fair constitution left, even when drugs had been applied for months and years without a cure, we have, in the past seven years, treated successfully the following diseases: Inflammatory and Mercurial Rheumatism; Paralysis; Lung, Bronchial and Catarrhal Affections; Diseases of the Heart, Kidneys, Liver; Dyspepsia, Constipation, Erysipelas, Scrofula, Piles, Inflammation of the Bowels, Chronic and Acute Diarrhœa, and all diseases and weaknesses peculiar to male and females. No physician in California is so favorably situated to furnish so many home comforts and hygienic conditions that are indispensable to the speedy recovery of nervous and chronic invalids. We have the only truly healthful boarding place in the State for men, women and children, with plenty of saddle and carriage horses for the use of patients and boarders.

To that class of Diseases and Weaknesses peculiar to females, and the medication that Hydropathic or Hygienic physicians employ in their cure, do we invite the special attention of patients and their friends. The ease and rapidity with which females suffering from general or special debility, recover in the bracing climate of the Bay, under Hygienic Medication, together with the universal success that has attended the treatment of females at Dr. Smith's Institutions, (both in Sacramento and San Francisco) has induced us to make this class of human afflictions a specialty of our Institution. We have treated (mostly in the cure), over 300 females, several of whom had been "bedridden" for months and years, and all have been decidedly benefited, and with but few exceptions, returned to their homes in from two to six weeks, so far recovered as to no longer to need a physician. We have never yet learned of a single instance of a relapse into their former condition.

There is not one female invalid in twenty that has been suffering from nervous debility or diseases peculiar to her sex, that cannot be permanently cured in from four to six weeks at our Cure, and at the mere cost of $100. This statement we make in confidence, from an experience of the last seven years. From the many who have been treated at our Cure, we have yet to learn of a single regret from husband or wife of the time or means they have expended in Hygienic Medication.

NEW YORK, Aug. 1, 1858.

To all whom it may concern:

This certifies, that Dr. Barlow J. Smith is a graduate of the New York Hygieo-Therapeutic College, which College has a regular Charter from the Legislature of the State of New York, and is authorized to grant Diplomas, conferring on its students all and the same privileges and immunities in relation to the practice of the Healing Art, that are conferred by the Diplomas of any Allopathic or other Medical College in the country.

Dr. Smith has also devoted much attention to Phrenology, especially in its connection with Physiology and Pathology, a portion of the time under the instruction of Fowler & Wells, of this city, and has labored successfully as a teacher and lecturer on these subjects.

R. T. TRALL,
Principal New York Hygieo-Therapeutic College.

To all whom it may concern:

I have known Dr Barlow J. Smith, both in our office as a Student, and a practical Phrenologist in the country, and from what I know of him I can cheerfully recommend him as an honest, faithful delineator of character, and as such can cheerfully recommend him to the public.

For the good of Science.

L. N. FOWLER, 308 Broadway, N. Y.

Dr. Smith spends a part of each day in San Francisco, attending to family practice and to Phrenological and Physiological examinations at his office, Room 13 Armory Hall, up stairs, corner Montgomery and Sacramento streets. Office hours from 11 A. M. to 2 P. M. Circulars sent on application. Address,

BARLOW J. SMITH, M. D.,
20v11tf San Francisco, Box 473.

Machinery.

HUNTER'S
PREMIUM
CONCENTRATOR, AMALGAMATOR
AND SEPARATOR,

Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERation daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 30 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste free gold and amalgam is amalgamated on the copper plates; no trace of ground mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, which with the greatest IRREGULARITY OF SPEED the best of results were given.

5th. There is no clogging or stopping to clean out the sulphurets and sand; consequently no waste from any inattention on the part of the attendant.

6th. In exhibiting the working of the machine (it is not run empty), all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see it to test the machine with.

Give it a trial, and satisfaction is guaranteed. All orders and any information required, address,

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15v11-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD'S
Separator & Amalgamator

Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; its small cost; its portability. The large quantity of pulp it can operate upon in a given time; it may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jefferson Ina Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada city; Crall's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8-6df

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA,		AUSTRALIA,
	WASHOE,	
ENGLAND,		FRANCE,

— AND —

THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE,	E. TYLER,	WM. P. BLAKE,
Idaho City.	Michigan Bluff.	San Francisco.

4v10

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant st. bet. 3d and 4th. (Illustrated in the Mining and Scientific Press, April 9th, 864.)

HEPBURN & PETERSON.

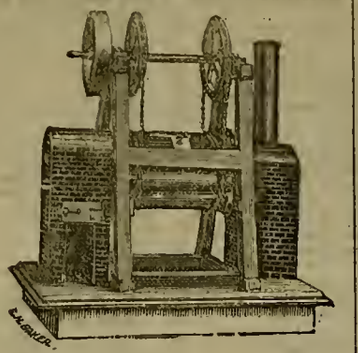
HUNT'S PATENT
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 28 Second street, San Francisco.

The Mechanics' Institute
AWARDED A
PREMIUM SILVER MEDAL
TO BRUCKNER'S
MECHANICAL ROASTING FURNACE.



Parties wishing to erect such Furnaces, are requested to leave their orders with

T. KALLENBERG,
12v11 416 Market street, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

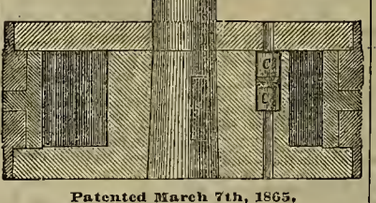
Stevens' Pressure Packing.



Patented March 7th, 1865.

Pressure Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight.

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which now have this packing in use—some of which have been running from three to twelve months without being opened, or showing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Alameda Railroad; or at the VULCAN IRON WORKS, where they can be seen, at any time, in course of construction.

10df **ANDREW STEVENS.**

SALMON'S
PROPELLOR AMALGAMATOR
— AND —
Challenge Settler

Has been in use and thoroughly tested, both in California and Nevada, with entire satisfaction to all parties concerned. These Machines are

Made entirely different from any others,

And with the same power will grind, amalgamate, settle and separate, more gold and silver ore than any others now in use. Manufactured at the SAN FRANCISCO FOUNDRY, where Machines can be seen in operation. Address

9v11 **J. & W. C. SALMON.**

McCOMB'S
CUMULATIVE POWER PRESS
AND
ARROW TIE.

E. C McCOMB, Agent.

STOW'S
PATENT CHAMBER DRILL.

The greatest Labor-saving Machine ever invented for Quartz Mining. By using this Drill in shafts, tunnels, and all other rock blasting, three-fourths of the labor and over one-half of the powder will be saved. The Drill makes a chamber directly at the bottom of the hole, at any depth you wish, six times the area of the original hole, in all kinds of rock, in less time than a man can drill a 12 hole two inches deep. Requiring no tamping, it will be impossible to have a premature blast.

AT THE STATE FAIR held in Sacramento, September, 1863, a Committee, after examining both the Lincoln's and Stow's Chamber Drills, reported as follows:

We, the undersigned, Committee on Mining Tools, do award to Henry M. Stow, of San Francisco, the FIRST PREMIUM for the best Chamber Drill for blasting rock, for the following reasons:

1st. For simplicity of construction.
2d. For durability of drill;
3d. For strength of drill.

The above Drills will be sent to any part of the State for **$30,** with one set of Cutters or Chisels that will chamber from 75 to 150 holes. Extra Chisels furnished at $2 50 per set.

The Drill may be seen at Mr. BUFFINGTON'S Office, No. 6 Government Block, corner Sansome and Washington streets, and at No. 511 Market street.

Drills will be delivered to any part of this State free of expense to the purchaser. Any information desired, or orders for Drills, address

STOW & COLLINS,
San Francisco

Oil Wells! Oil Wells!!

I received at the last STATE FAIR a special Premium for the best Expanding Drill for boring oil wells. The above Drill will bore the hole from ¼ inch to 2 inches larger than the inside of the pipe or tubing of the well, if desired, making the bore perfectly straight and round. The Drill can be attached to and work with any common drill at an expense of from $25 to $50. I will furnish all machinery for boring, or will take contracts for boring wells, and furnish steam engines and all tools required. Address,

HENRY M. STOW,
14v11 San Francisco.

WATER WHEELS!

Equal to the Best Overshot Whee

POWER PLEDGED

IN EXISTENCE.

LEFFEL'S
AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 29½. That we may know the proper Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds, will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
At Vulcan Iron Works, office 137 and 139 First street, San Francisco. 4v11tf

VARNEY'S
PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constantly and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Settlers made on the same principle excel all others.—They bring the pulp to constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and settlers for themselves, at the **PACIFIC FOUNDRY,**
1v1 San Francisco.

MITCHELL'S
COMBINED
FAUCET AND MEASURE.

This is one of the most useful inventions of the day, and is destined to go into universal use on this coast, as it has in the Eastern States.

The invention consists of a combined Faucet and Measure, so arranged that the liquid contents of any cask or other vessel can be drawn and accurately measured without the use of measures or funnels other than such as are embraced in the Faucet itself. While it obviates altogether the use of measures, it operates much more perfectly than the old method of drawing and measuring such liquids as have a tendency to foam up when drawn, as coal oil, linseed oil, etc.

The Proprietor has made arrangements with GALLAGHER, WEED & WHITE, of the California Brass Foundry of this city, for the manufacture of this Faucet, and is prepared to furnish the article or sell territories. Here is a chance for men with small capital to invest in a good business.

Residence, 320 Taylor street, near O'Farrell street.

D. C. MITCHELL, Prop'r.
San Francisco, Aug. 22d, 1865. 10v11-3m

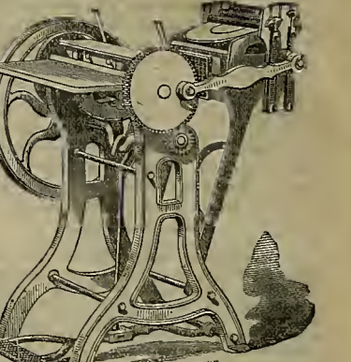
JOB PRINTING

—FOR—

THE PEOPLE!

Mining and Scientific Press



JOB PRINTING OFFICE,

505 Clay Street,

(Southwest corner of Sansome street, on 2d floor,)

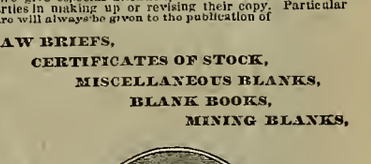
Formerly WATERS BROS. & CO.'S.

We are now prepared to offer customers the most favorable inducements to patronize our Book and Job Printing Establishment. Our office is supplied with AN EXTENSIVE assortment of Type, and the BEST style of Presses for good WORK and

CHEAP AND RAPID PRINTING.

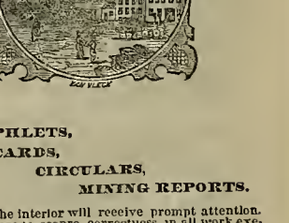
Patrons will always find us well up to the times, ready to execute superior work, and furnish the same as cheap as any prompt and reliable firm in San Francisco.

Our aim is to suit our CUSTOMERS in regard to style and prices, and will guarantee entire satisfaction to every reasonable individual who may be kind enough to bestow upon us his patronage.



We give especial attention, when desired, in assisting parties in making up or revising their copy. Particular care will always be given to the publication of

LAW BRIEFS,
CERTIFICATES OF STOCK,
MISCELLANEOUS BLANKS,
BLANK BOOKS,
MINING BLANKS,



BOOKS,
PAMPHLETS,
CARDS,
CIRCULARS,
MINING REPORTS.

Orders from the interior will receive prompt attention. We shall take care to secure correctness in all work executed for parties out of town. Small packages can be forwarded by mail at small expense.

City customers, or persons visiting San Francisco, are invited to call and examine our specimens, when they will be politely informed of our prices by the Proprietors.

DEWEY & CO., Proprietors,

Mining and Scientific Press Patent Agency, Newspaper and Job Printing Office.

505 Clay Street, San Francisco.

A. T. DEWEY. W. B. EWER. C. W. M. SMITH.
